Accessible Accessibility Review Plan MCP

Turn your personal accessibility needs into a concrete action plan.

Accessible Accessibility Review Plan MCP converts your daily routines, support setups, and personal barriers into a structured Keep-Change-Stop audit. Instead of vague goals, you get a specific roadmap to manage your environment and interactions with third parties.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Accessible Accessibility Review Plan MCP

4 tools available

Cloud-hosted on Vinkius

You shouldn't have to struggle to explain why a specific setup isn't working for you. This MCP acts as a reasoning engine that takes your real-world experiences and turns them into a formal accessibility audit. You can feed it details about your current ergonomic tools, your daily support arrangements, or the physical barriers in your workspace. It looks at your specific success criteria and identifies exactly where things are failing. From there, it builds a Keep-Change-Stop plan. This isn't just a list of complaints; it's a structured way to decide what to maintain, what to modify, and what to stop doing to improve your daily life. You can also use it to prep for meetings with landlords, employers, or healthcare providers by generating specific questions to ensure your needs are met.

Core Capabilities

01 — Barrier Identification

Your agent uses this to find gaps between your current setup and your goals.

02 — Action Plan Generation

Your agent creates a Keep-Change-Stop list based on your specific needs.

03 — Stakeholder Preparation

Your agent writes questions for you to use when talking to landlords or employers.

04 — Review Planning

Your agent organizes a roadmap for your future accessibility check-ins.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/accessible-accessibility-review-plan — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to the Vinkius catalog.
- 02 Describe your current setup and the barriers you face to your AI client.
- 03 Run the analysis to identify specific gaps in your current environment.
- 04 Generate a Keep-Change-Stop plan to guide your next steps.
- 05 Use the stakeholder tool to prepare for conversations with third parties.

Connect your client to Vinkius and start auditing your environment immediately.

Built For

This MCP is built for individuals navigating physical or digital environments that don't meet their specific needs.

Individuals with disabilities

You use this to turn lived experience into organized requests for support or equipment.

Accessibility Coordinators

You use this to structure audits and follow-up plans for users.

Occupational Therapists

You use this to help clients organize their ergonomic and environmental needs into actionable steps.

What Changes When You Connect

- 01 Converts subjective experiences into objective, structured plans.

- 02

Reduces the mental load of organizing accessibility requests.
- 03

Provides specific questions to facilitate communication with third parties.
- 04

Creates a repeatable framework for reviewing environmental changes.

Real-World Applications

Workstation Ergonomics

Identify why a specific keyboard or desk height is causing strain and plan a change.

Software Navigation

Analyze why certain digital tools are difficult to use and plan alternative workflows.

Home Accessibility

Prepare questions for a landlord or contractor regarding physical modifications like ramps.

Support Management

Review current support arrangements to see what should be kept or modified.

Patterns to Avoid

Vague accessibility complaints

AVOID

Telling your agent that your desk feels uncomfortable without explaining why or what you need to change.

✓ INSTEAD

Provide specific details about your physical barriers so you can use `analyze_accessibility_state` to find the exact gaps in your setup.

Unprepared stakeholder meetings

AVOID

Walking into a meeting with a landlord or employer without a clear list of what you need to ask.

✓ INSTEAD

Use `create_stakeholder_engagement` to generate specific questions that address your needs before the meeting starts.

Lack of follow-up structure

❌ AVOID

Making changes to your workspace but having no way to track if those changes actually worked over time.

✓ INSTEAD

Use `construct_review_agenda` to build a roadmap that keeps your future accessibility check-ins organized.

The Right Fit

Connect this MCP if you need to turn lived experience into formal, organized requests for support or equipment. Do not connect it if you are looking for a general productivity tool. The decision depends on whether you have specific accessibility barriers that require a structured Keep-Change-Stop plan.

The 4 Tools in the Accessible Accessibility Review Plan MCP

These tools turn your personal observations into structured audits and actionable plans for environmental or digital changes.

#	TOOL	DESCRIPTION
01	analyze_accessibility_state	This tool evaluates your current setup against your specific success criteria to find hidden barriers.
02	construct_review_agenda	This tool builds a roadmap for your next review session to keep your progress on track.
03	create_stakeholder_engagement	This tool prepares specific questions for third parties to help you implement your accessibility plan.
04	generate_keep_change_stop	This tool converts your analysis into a structured Keep-Change-Stop action plan.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Analyze my current setup: I use a specialized ergonomic keyboard and a voice-to-text tool, but I struggle to navigate my desktop software quickly.

Your current setup provides strong input capabilities, but the software navigation is a primary barrier. We should focus on adjusting your software shortcuts or exploring new navigation tools to meet your success criteria.

U Generate a review plan based on my analysis where I need to change my workstation height and stop using my current heavy mouse.

The plan includes: Change: Adjust workstation height to improve ergonomic alignment. Stop: Cease use of the current heavy mouse to reduce wrist strain.

U What questions should I ask my landlord about installing a ramp?

You should ask: 'What are the specific requirements for installing a temporary ramp at the entrance?' and 'Are there any structural guidelines I should follow to ensure compliance?'

Frequently Asked Questions

01 What is a Keep-Change-Stop plan?

It is a structured way to organize actions by deciding what to keep doing, what to change, and what to stop doing based on an accessibility audit.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

03 How does this help with communicating with landlords?

The MCP can generate specific, targeted questions for you to ask third parties to ensure your requests for modifications are clear and compliant.

04 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and it is ready to use.

05 Can I use this for digital accessibility?

Yes, you can use it to analyze how software or digital tools create barriers in your workflow.

06 Is this a medical assessment?

No. This is a practical audit of how environments, tools, and support systems align with your specific goals and success criteria.

07 How does the Keep-Change-Stop framework work?

It categorizes your current state: Keep items that meet your goals, Change items that need adjustment to reduce barriers, and Stop items that actively create obstacles.

08 Can I use this with Claude Desktop?

Yes. You can connect this MCP to Claude Desktop, Cursor, VS Code, Windsurf, and any other MCP-compatible client via Vinkius Edge.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

`https://edge.vinkius.com/[TOKEN]/mcp`

CLIENT	WHERE TO CONFIGURE
 Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
 Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
 VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add <code>"accessible-accessibility-review-plan": { "url": "..." }</code>
 Windsurf	MCP Settings → <code>mcp_settings.json</code> → Add endpoint URL
 ChatGPT	Settings → Tools & plugins → Add MCP server → Paste endpoint
 Gemini	Extensions → Add MCP Server → Paste endpoint URL
