Accessible Event Accommodation Planner MCP

Handle accessibility requests without oversharing personal medical data.

Accessible Event Accommodation Planner MCP helps you navigate event policies to request the support you need. It uses the Minimum-Disclosure Rule to ensure you only share necessary information, keeping your private medical details out of the hands of organizers. Your AI client can use this to draft compliant requests, track submission deadlines, and plan follow-ups if you don't hear back.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Accessible Event Accommodation Planner MCP

4 tools available

Cloud-hosted on Vinkius

You shouldn't have to trade your privacy for accessibility. When you're heading to a conference or workshop, requesting a ramp, a sign language interpreter, or specific seating often requires sharing details about your health that you'd rather keep private. This MCP changes that by acting as a buffer between your needs and the event organizer's requirements.

Instead of guessing what to say, you let your AI client handle the heavy lifting. It looks at the specific event policy and tells you exactly what information is required and what is unnecessary. It follows the Minimum-Disclosure Rule to protect your data, ensuring your requests are professional and compliant without being over-exposed. Beyond just drafting text, it keeps you on schedule by calculating how much time you have left before a deadline and helps you build a plan to escalate your request if the organizers ignore your initial outreach. It's a practical way to manage accessibility logistics through your existing AI workflow.

Core Capabilities

01 — Privacy Protection

Your agent uses the Minimum-Disclosure Rule to strip out unnecessary medical details from your requests.

02 — Deadline Tracking

The AI calculates your remaining time to ensure you don't miss an accommodation window.

03 — Policy Alignment

It maps your specific needs directly to the organizer's stated requirements.

04 — Response Planning

It builds a contact hierarchy so you know exactly who to reach out to if your request is ignored.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/accessible-event-accommodation-planner — connect your AI agent in three steps.

- 01

Connect the MCP to your client like Claude or Cursor via Vinkius.
- 02

Provide the event policy and your specific accommodation needs to your AI agent.
- 03

The agent uses the tools to check for privacy compliance and deadline urgency.
- 04

Review the drafted request and the escalation plan generated by the agent.
- 05

Send your finalized, privacy-respecting request to the organizer.

Connect the MCP to your AI client and start managing requests through natural language.

Built For

This is for anyone attending events who needs to request accommodations without compromising their medical privacy.

Event Attendees

People who need to hand off their accommodation needs to an AI to draft compliant requests.

Accessibility Advocates

Users who want to ensure requests follow privacy-first standards like the Minimum-Disclosure Rule.

Conference Participants

Individuals managing multiple event deadlines who need to track submission urgency.

What Changes When You Connect

- 01

Reduces the amount of sensitive medical data shared with third-party organizers.

-
- | | |
|----|---|
| 02 | Prevents missed deadlines through automated urgency calculations. |
| 03 | Provides a clear path for follow-up if organizers fail to respond. |
| 04 | Ensures requests meet the specific requirements of an event's policy. |
-

Real-World Applications

Conference Accessibility

Requesting a sign language interpreter or mobility assistance for a large professional gathering.

Privacy-First Requests

Drafting a request for a specific accommodation while removing unnecessary medical history.

Deadline Management

Checking how many days remain to submit a request for a workshop or seminar.

Escalation Planning

Determining the next person to contact when an initial accommodation request goes unanswered.

Patterns to Avoid

Over-sharing medical history

❌ AVOID

You draft an email to a conference organizer that includes your full medical diagnosis and history of mobility issues.

✓ INSTEAD

Use ``validate_disclosure_compliance`` to strip out unnecessary medical details and stick to the Minimum-Disclosure Rule.

Ignoring submission windows

❌ AVOID

You assume you have plenty of time to request a sign language interpreter and realize two days before the event that the deadline passed.

✓ INSTEAD

Run ``calculate_submission_urgency`` to see exactly how much time remains before you miss the window.

Waiting too long for replies

❌ AVOID

An organizer ignores your request for seating assistance, so you just wait and hope they eventually see it.

✓ INSTEAD

Use `generate\_escalation\_strategy` to build a contact hierarchy so you know who to contact next if the first person stays silent.

The Right Fit

Connect this MCP if you attend professional events and need to request accommodations without exposing sensitive health data. Do not connect it if you do not require accessibility support or if you prefer manually managing all event logistics. The deciding factor is whether you value maintaining medical privacy through the Minimum-Disclosure Rule.

Accessible Event Accommodation Planner Tools

These tools handle the logistics of privacy-first accommodation requests and deadline tracking.

#	TOOL	DESCRIPTION
01	calculate_submission_urgency	This tool looks at your upcoming deadlines to tell you exactly how much time you have left to submit a request.
02	generate_escalation_strategy	It creates a step-by-step contact hierarchy to use if the primary organizer doesn't respond to your request.
03	validate_disclosure_compliance	It checks your drafted request against the Minimum-Disclosure Rule to make sure you aren't sharing more medical info than necessary.
04	analyze_policy_and_request	This tool compares an event's specific policy against your personal needs to find the best way to ask for support.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I need to request a sign language interpreter for an in-person conference. The policy says to email accessibility@event.com by Oct 1st. Here is the policy: [Policy Text]. I can provide a doctor's note if needed.

Request: 'I am writing to request a sign language interpreter for the upcoming in-person conference. Please let me know the next steps for this accommodation.'

Questions: Would you like to include the specific date of the conference?

Timeline: You should receive a response by the October 1st deadline.

Escalation: If no response is received, contact the Event Coordinator.

U How much time do I have left to submit my request for the workshop on Dec 15th? The deadline is Dec 10th and today is Dec 8th.

You have 2 days remaining. Your urgency level is Critical.

U Check if this request is okay: 'I need a ramp because I use a wheelchair. My medical history shows I have mobility issues.' Policy: 'Requests must state the required accommodation.'

The request is non-compliant. It includes unnecessary medical history that is not required by the policy. You should only state the need for a ramp.

Frequently Asked Questions

01 How does this MCP protect my privacy?

It uses the Minimum-Disclosure Rule to ensure you only share the information required by the event policy, preventing unnecessary medical details from being sent to organizers.

02 What AI clients can I use with this MCP?

You can connect this MCP to any compatible client, including Claude, Cursor, Windsurf, and VS Code.

03 Can it help if an organizer doesn't respond?

Yes, it can generate an escalation strategy that provides a structured hierarchy of contact points to follow if your primary request is ignored.

04 Does it track deadlines?

Yes, it includes a tool to calculate submission urgency based on the remaining time before an event's deadline.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect your client.

06 How does this tool protect my privacy?

The tool uses the `validate\_disclosure\_compliance` function to ensure that only the essential information required by the organizer's policy is included in your request, adhering to the Minimum-Disclosure Rule.

07 Can I use this for virtual events?

Yes, by providing the event format in the `analyze\_policy\_and\_request` tool, the generated plan will account for the specific needs of virtual, in-person, or hybrid settings.

08 What happens if my request is ignored?

The `generate\_escalation\_strategy` tool builds a structured hierarchy of contact points based on the organizer's policy to guide your next steps.
