Accessible Event Attendance Commitment Plan MCP

Make informed decisions about event safety and accessibility.

Accessible Event Attendance Commitment Plan MCP helps you decide if an event is safe and accessible for your specific needs. It analyzes venue data and constraints to provide clear attendance decisions, actionable accommodation steps, and safety-focused exit strategies.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Accessible Event Attendance Commitment Plan MCP

4 tools available

Cloud-hosted on Vinkius

You can use this MCP to remove the guesswork from attending public events. Instead of wondering if a venue can actually support your sensory or physical requirements, you provide your needs and the venue details to your AI client. The MCP then runs a feasibility check to tell you if attending is a realistic option. If it is, the tool moves from decision-making to planning. It identifies exactly what you need to ask for to get support, helps you delegate tasks to companions so you aren't managing everything alone, and builds a specific exit strategy based on your comfort levels. It turns vague venue descriptions into a concrete roadmap for participation.

Core Capabilities

01 — Feasibility Analysis

Your agent uses this to determine if a venue meets your specific accessibility requirements.

03 — Role Delegation

Your agent assigns specific tasks to you and your companions for the day of the event.

02 — Accommodation Planning

Your agent generates a list of required actions to secure necessary support at an event.

04 — Safety Exit Strategies

Your agent creates departure plans tailored to your sensory and physical needs.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/accessible-event-attendance-commitment-plan — connect your AI agent in three steps.

- 01

Connect your preferred MCP-compatible client to Vinkius.
- 02

Provide your specific accessibility needs and the venue details to your agent.
- 03

The agent runs feasibility checks and generates accommodation or exit plans.
- 04

Use the resulting roadmap to attend your event with confidence.

Connect your AI client to Vinkius to start using these accessibility tools immediately.

Built For

This MCP is built for individuals who need to plan event attendance around specific accessibility or sensory requirements.

Event Attendees

Users who hand off their personal accessibility needs to the AI to get a go or no-go decision.

Accessibility Coordinators

Professionals who use the tool to generate action items for securing accommodations.

Caregivers and Companions

People who use the tool to understand their specific responsibilities during an outing.

What Changes When You Connect

- 01

Reduces uncertainty by providing definitive attendance decisions.
- 02

Creates actionable steps for requesting necessary accommodations.

-
- 03** Distributes event responsibilities to prevent user burnout.
-
- 04** Provides safety-focused exit plans based on sensory preferences.
-

Real-World Applications

Sensory-Friendly Concert Planning

Check if a loud music venue has the quiet spaces or sensory accommodations you need before buying tickets.

Wheelchair Access Verification

Determine the specific steps needed to ensure a venue provides proper seating and navigation for mobility needs.

Companion Coordination

Use the tool to decide how a companion can best support you during a workshop or large gathering.

Emergency Preparedness

Develop a clear exit strategy for when a sensory environment becomes overwhelming.

Patterns to Avoid

Vague accessibility inputs

❌ AVOID

Telling your agent you just need 'some help' with sensory issues at a concert.

✓ INSTEAD

Provide specific details about your sensory requirements so you can use `evaluate_attendance_feasibility` to get a real answer.

Ignoring companion roles

❌ AVOID

Planning an entire outing alone and expecting to manage every single detail without help.

✓ INSTEAD

Use `assign_day_of_roles` to split the workload between you and your companions before you leave.

Reactive exit planning

❌ AVOID

Waiting until you are already overwhelmed at a venue to try and figure out how to leave.

✓ INSTEAD

Build a proactive plan ahead of time by using `construct_exit_plan` to map out your departure.

The Right Fit

Connect this MCP if you need to make data-driven decisions about attending public events based on physical or sensory needs. Do not connect it if you are looking for general venue reviews or crowd estimates. The deciding factor is whether you require a personalized roadmap for participation and support.

4 Tools for Accessible Event Planning

These tools handle everything from initial venue checks to final exit strategies for your specific needs.

#	TOOL	DESCRIPTION
01	assign_day_of_roles	This tool helps you divide responsibilities between yourself and your companions to make participation easier.
02	construct_exit_plan	This tool builds a departure strategy focused on your safety and sensory comfort.
03	evaluate_attendance_feasibility	This tool checks if an event is actually safe and accessible for you based on the data you provide.
04	generate_accommodation_actions	This tool lists the specific steps you need to take to secure the support you require at a venue.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Can I attend a concert with high noise levels if I have sound sensitivity and need a quiet space?

Decision: Decline. Reasoning: The venue rules explicitly state that quiet rooms are not available, which conflicts with your essential sensory requirement for sound sensitivity.

U I am attending a workshop with a companion. What should our roles be?

User: Monitor sensory environment. Companion: Manage navigation and exit route monitoring.

U What actions should I take to ensure I have a wheelchair-accessible seat?

Contact the venue coordinator via the provided contact details to request specific seating placement in the accessible zone.

Frequently Asked Questions

01 What AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

02 How does the MCP decide if an event is accessible?

It analyzes the venue data you provide against your specific accessibility requirements to determine if attendance is safe and realistic.

03 Can this tool help me with my companions?

Yes, it can assign specific roles to you and your companions to ensure you can participate more easily.

04 Does this MCP provide actual accommodation requests?

It generates a list of specific actions you need to take to secure the accommodations you require.

05 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use as soon as you connect.

06 How does the tool decide if I can attend an event?

The `evaluate\_attendance\_feasibility` tool compares your specific sensory, mobility, and assistance needs against the venue's published accessibility info and hard rules to provide a 'Go' or 'Decline' decision.

07 Can this help me prepare for sensory overload?

Yes. The `construct\_exit\_plan` tool uses your sensory preferences to generate specific trigger conditions and exit routes to ensure you can leave safely and comfortably.

08 How are responsibilities assigned for my companions?

The `assign\_day\_of\_roles` tool distributes specific responsibilities to you and your companions based on your participation goals and support needs.
