Accessible Public Service Visit Planner MCP.

Get ready for essential appointments without the extra stress.

Accessible Public Service Visit Planner MCP helps you navigate the logistics of visiting government or public agencies. It handles the heavy lifting of checking accessibility constraints, organizing your paperwork, and drafting formal accommodation requests so you can focus on the task at hand.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Accessible Public Service Visit Planner MCP

4 tools available

Cloud-hosted on Vinkius

Navigating public service offices often involves unpredictable hurdles, from physical barriers to complex paperwork requirements. This MCP acts as a logistical coordinator for your AI client, turning a vague appointment into a concrete action plan. You can use it to map out exactly what you need to bring and how to present it to staff to avoid delays. If a facility lacks proper access, the MCP helps you draft the specific language needed to request accommodations. It also looks ahead to what happens after you leave the building, ensuring you don't miss critical follow-up steps. Instead of guessing what to expect, you get a structured strategy tailored to your specific physical needs and the agency's rules.

Core Capabilities

01 — Barrier Identification

Your agent uses this to spot physical or procedural obstacles before you arrive.

02 — Document Sequencing

The AI determines the most logical order to hand over paperwork to staff.

03 — Formal Request Drafting

Your agent writes structured accommodation requests for agency review.

04 — Post-Visit Management

The AI generates a list of tasks to complete after the appointment is over.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/accessible-public-service-visit-planner — connect your AI agent in three steps.

- 01 Connect the MCP to your preferred AI client via Vinkius.
- 02 Provide your appointment details and specific accessibility needs to your agent.
- 03 Review the generated readiness plan and document sequences.
- 04 Use the drafted accommodation requests or follow-up tasks as needed.

Connecting this MCP to your AI client gives you a specialized logistics assistant for public services.

Built For

This MCP is built for anyone who needs to interact with public agencies and requires extra logistical support.

Individuals with disabilities

They use the MCP to prepare for physical accessibility needs and accommodation requests.

Caregivers

They use the tool to manage the logistics and documentation for others.

Advocates

They use the tool to ensure clients have clear, actionable plans for service visits.

What Changes When You Connect

- 01 Reduces the cognitive load of planning complex visits.
- 02 Minimizes physical friction by identifying facility barriers early.
- 03 Speeds up agency interactions through optimized document presentation.

04 Ensures follow-up tasks are not forgotten after the appointment.

Real-World Applications

DMV Appointments

Prepare for identity verification and physical access requirements at motor vehicle departments.

Passport Renewals

Organize the exact sequence of documents needed for federal agency processing.

City Hall Visits

Draft accommodation requests for sensory or mobility needs when visiting local government offices.

Social Service Meetings

Manage the post-visit steps required to finalize service requests or resolve issues.

Patterns to Avoid

Vague visit preparation

❌ AVOID

Asking your agent to just 'get ready for the DMV' without providing specific mobility or document details.

✓ INSTEAD

Provide your specific profile and agency requirements to ``plan_visit_readiness`` for a complete strategy.

Disorganized paperwork handoff

❌ AVOID

Handing a stack of unorganized documents to a clerk and hoping they find what they need.

✓ INSTEAD

Use ``calculate_document_handoff`` to determine the most efficient order to present your paperwork.

Ignoring post-visit requirements

❌ AVOID

Leaving a social service office and forgetting that you need to mail in a signed form the next day.

✓ INSTEAD

Run ``create_followup_actions`` to identify every step needed to finalize your request after you leave.

The Right Fit

Connect this MCP if you or your clients frequently navigate government offices with specific physical or procedural needs. Do not connect it if you only interact with digital-only services. The decision rests on whether your public service visits involve physical barriers or complex document sequences.

4 Tools for Planning Accessible Public Service Visits

These tools handle everything from initial visit preparation to post-appointment follow-up tasks.

#	TOOL	DESCRIPTION
01	calculate_document_handoff	This tool determines the best order to present your documents to agency staff for maximum efficiency.
02	create_followup_actions	This tool identifies the specific steps you need to take after your visit to ensure everything is resolved.
03	generate_accommodation_request	Use this to create a structured, formal request for accommodations to give to agency staff.
04	plan_visit_readiness	This tool builds a full preparation strategy based on your specific profile and the agency's requirements.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I have a DMV appointment tomorrow at 10 AM. The facility has stairs but I use a wheelchair. The agency requires my ID and proof of residence. What is my plan?

Your visit readiness plan identifies a Critical Barrier: the facility has stairs which conflicts with your wheelchair requirement. You should use `generate_accommodation_request` to request ramp access or a ground-floor service point.

U Help me organize my documents for my passport renewal. I have my old passport, a birth certificate, and a utility bill.

The optimal sequence is: 1. Old Passport, 2. Birth Certificate, 3. Utility Bill. This order prioritizes identity verification first to satisfy the most critical requirement immediately.

U I need to request an accommodation for my sensory processing needs at the city hall visit.

The generated accommodation request includes a request for a quiet waiting area and simplified verbal instructions to mitigate sensory overwhelm.

Frequently Asked Questions

01 How does this MCP help with accessibility?

It analyzes your specific profile against agency requirements to identify physical barriers and drafts formal requests for accommodations.

02 Can I use this with Claude or Cursor?

Yes, you can connect this MCP to any compatible client like Claude, Cursor, or Windsurf through the Vinkius platform.

03 Does it help with paperwork?

Yes, it calculates the most efficient order to present your documents to agency staff to avoid delays.

04 What happens after my appointment is over?

The MCP can generate a list of follow-up actions to ensure your service request is completed or any issues are resolved.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP, so it is ready to use as soon as you connect your client.

06 How does the tool handle conflicting agency rules and accessibility needs?

The `plan\_visit\_readiness` tool specifically checks for conflicts between agency rules and user priorities, flagging them as Critical Barriers.

07 Can I use this to prepare for a medical appointment?

Yes, any public service appointment involving specific facility rules and accessibility requirements can be processed by these tools.

08 What information do I need to provide?

You should provide appointment details, facility information, service requirements, your accessibility priorities, and any specific agency rules.
