Address Change Notification Plan MCP

Organize every notification and deadline for your upcoming move.

Address Change Notification Plan MCP acts as a planning engine for residential or business relocations. It calculates move-related deadlines, organizes tasks by priority, and provides professional communication templates. Your AI client uses this to build a chronological roadmap so you don't miss critical updates for banks, utilities, or government agencies.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Address Change Notification Plan MCP

4 tools available

Cloud-hosted on Vinkius

Moving is a logistical headache. This MCP handles the heavy lifting of notifying organizations about your new address. Instead of guessing when to contact your bank or utility provider, you give your move date to your AI client, and it builds a sequenced roadmap. It categorizes tasks into priority tiers so you handle the most critical updates first.

You can use it to pull professional message templates for different channels like email or SMS, ensuring your communications are clear and formal. It also helps you stay on track by calculating how much of your plan is actually finished. If you need to ensure a specific update is legally sound, the MCP can identify if an audit trail or specific evidence is required for that task. It turns a chaotic list of chores into a structured, timed execution plan.

Core Capabilities

01 — Deadline Calculation

Your agent calculates specific dates for each notification based on your move date.

02 — Priority Tiering

The MCP organizes your tasks into tiers to ensure critical updates happen first.

03 — Template Generation

Your AI client pulls professional drafts for email, SMS, or web portals.

04 — Progress Tracking

The tool calculates the percentage of your notification plan that is complete.

05 — Audit Verification

Your agent checks if a specific update requires an audit trail for successful processing.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/address-change-notification-plan — connect your AI agent in three steps.

- 01 Connect your MCP-compatible client to the Vinkius platform.
- 02 Provide your move date and a list of organizations to your AI client.
- 03 Generate a sequenced roadmap with specific deadlines.
- 04 Use the templates to send out your notifications.
- 05 Track your progress as you complete each task.

Connect your client to Vinkius and start planning your move immediately.

Built For

This MCP is built for anyone managing a relocation, from individuals to business owners.

Relocating Individuals

People moving homes who need to manage utility and bank updates.

Business Managers

Professionals handling office relocations and official corporate address changes.

Personal Assistants

Staff members who manage the logistical checklists for executives or families.

What Changes When You Connect

- 01 Calculates specific deadlines to prevent missed notifications.
- 02 Organizes tasks into priority tiers for better time management.

03 Provides professional templates to reduce writing time.

04 Tracks completion percentages to monitor move progress.

Real-World Applications

Residential Moves

A family uses the roadmap to ensure their electricity and water services are updated before they arrive at a new house.

Compliance Management

A user checks if a specific address update requires an audit trail to satisfy legal or banking requirements.

Business Relocation

An office manager uses the priority tiers to notify government agencies and vendors in the correct order.

Task Monitoring

A person moving mid-month uses the completion status to see exactly which organizations still need to be notified.

Patterns to Avoid

Manual task sequencing

❌ AVOID

You try to guess which utility companies to call first by looking at a pile of old bills. This leads to missing critical deadlines for electricity or water.

✓ INSTEAD

Give your move date to your agent and use ``generate_notification_plan`` to get a sequenced, chronological roadmap instead.

Ignoring compliance needs

❌ AVOID

You send an email to your bank to change your address but forget that they require a specific audit trail for the update to count.

✓ INSTEAD

Run ``verify_evidence_requirement`` before you send your notice to see if you need to provide supporting documentation.

Guessing your progress

❌ AVOID

You tell your family you are halfway through the move, but you actually still have ten banks and five utilities left to notify.

✓ INSTEAD

Use ``calculate_completion_status`` to get an exact percentage of how many notification tasks are actually finished.

The Right Fit

Connect this MCP if you are managing a residential move or a business relocation and need a structured timeline. Do not connect it if you are just moving a single piece of mail or a single subscription. The decision depends on whether you have a complex list of organizations that require coordinated, timed updates.

Address Change Notification Plan Tools

These tools build, manage, and track your entire relocation notification schedule. They handle everything from initial roadmap creation to final compliance checks.

#	TOOL	DESCRIPTION
01	calculate_completion_status	This tool tracks your progress. It evaluates how many notification tasks in your plan are finished.
02	generate_notification_plan	This tool builds your schedule. It creates a sequenced, chronological roadmap of every necessary address change.
03	get_message_templates	This tool provides ready-to-use drafts. It retrieves professional communication templates based on the organization type and your chosen contact method.
04	verify_evidence_requirement	This tool checks for compliance. It identifies if a specific notification task requires an audit trail or supporting documentation.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Create a notification plan for my move on 2025-06-01. I need to notify my Utility company (Tier 1, account: 12345, Email), my Bank (Tier 2, account: 98765, Web Portal), and my Gym (Tier 3, account: 55555, SMS).

Your notification plan is ready. You should notify your Utility company by 2025-05-02, your Bank by 2025-05-18, and your Gym by 2025-05-25.

U I need a message template to notify my local government office about my address change via Email.

Subject: Notice of Change of Residential Address

Dear [Organization Name],

Please be advised that my residential address will change effective [Date]. My account reference is [Reference].

U How much of my notification plan is finished? I have completed 'Notify Utility' and 'Notify Bank'.

You have completed 2 out of 3 tasks. Your progress is 66.6%.

Frequently Asked Questions

01 What can this MCP do for my move?

It builds a timed roadmap of all necessary address changes, provides message templates, and tracks your progress.

02 Can I use this with Claude or Cursor?

Yes, you can use this MCP with any MCP-compatible client like Claude, Cursor, or Windsurf once connected via Vinkius.

03 How does it decide when to notify someone?

The MCP calculates deadlines based on the move date you provide, organizing tasks into priority tiers.

04 Does it provide the actual messages for me?

Yes, the `get_message_templates` tool provides professional drafts for different organization types and communication channels.

05 How do I know if I've finished my notifications?

You can use the `calculate_completion_status` tool to see a percentage of how much of your plan is done.

06 How are notification deadlines calculated?

Deadlines are calculated by subtracting a specific lead time from your move date based on the organization's priority tier. Tier 1 requires the most lead time to prevent service interruptions.

07 Can I get templates for my notifications?

Yes, you can use the `'get_message_templates'` tool to retrieve professional and appropriately toned message drafts for different organization types and communication channels.

08 How do I know if I need to save proof of the update?

You can use the `'verify_evidence_requirement'` tool to check if a specific task requires an audit trail, such as an email confirmation or a reference number.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
