AI Revenue Growth Accelerator MCP.

Model the financial impact of AI on your business.

AI Revenue Growth Accelerator MCP gives your AI client the math needed to project how AI implementation changes your bottom line. It handles the heavy lifting for revenue acceleration, investment feasibility, market capture, and sales productivity gains, turning vague AI ideas into concrete financial models.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

AI Revenue Growth Accelerator MCP

4 tools available

Cloud-hosted on Vinkius

You can't build a business case for AI on gut feeling alone. This MCP gives your agent the specific tools required to run financial simulations that prove whether an AI initiative is worth the cost. Instead of guessing, you can ask your AI client to calculate exactly how much incremental revenue a new feature might bring in or if a specific investment stays within your budget. It breaks down the impact into clear categories like sales efficiency and market expansion. You use it to bridge the gap between technical AI capabilities and the actual financial outcomes your leadership team cares about. It's about turning high-level AI concepts into hard numbers you can actually use for planning.

Core Capabilities

01 — Revenue Projections

Your agent calculates incremental revenue and growth timelines based on business levers.

02 — Investment Checks

The AI determines if an AI project's cost is within acceptable limits relative to its returns.

03 — Market Capture Analysis

Your agent estimates how much market expansion is possible through new AI product features.

04 — Sales Efficiency Modeling

The AI measures the specific revenue lift caused by improvements in sales team productivity.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/ai-revenue-growth-accelerator — connect your AI agent in three steps.

- 01
- Connect the MCP to your client like Claude or Cursor via Vinkius.
- 02
- Provide your business data and levers to your AI client.
- 03
- Ask your agent to run a specific projection or feasibility check.
- 04
- Receive immediate, calculated financial results.

Connecting this MCP to your workflow takes seconds and gives your agent immediate access to financial modeling tools.

Built For

This MCP is built for leaders who need to justify AI spending with data. It turns your AI client into a financial analyst.

Finance Directors

Use the AI to run feasibility checks on proposed AI investments.

Product Managers

Ask the AI to model how new AI features will impact market capture and revenue.

Sales Operations

Model the revenue lift expected from AI-driven productivity improvements.

What Changes When You Connect

- 01
- Converts AI capability ideas into hard revenue projections.
- 02
- Validates investment decisions against projected returns.
- 03
- Quantifies the impact of sales efficiency on the bottom line.

04 Estimates realistic market expansion through AI features.

Real-World Applications

Budget Justification

Run a feasibility check to see if a 200,000 Euro AI project makes sense against its projected revenue.

Sales Strategy

Calculate the revenue lift you can expect if you improve sales productivity by a certain percentage.

Product Roadmap Planning

Model how adding specific AI features will increase your market capture.

Growth Forecasting

Get a timeline and revenue projection for a new market expansion driven by AI.

4 Tools Available

#	TOOL	DESCRIPTION
01	get_sales_productivity_impact	This tool calculates the specific revenue lift you get from making your sales team more efficient.
02	get_investment_feasibility	Use this to check if the cost of an AI project is reasonable compared to the revenue it's expected to generate.
03	get_market_opportunity_impact	This tool estimates how much of a new market you can actually capture by adding AI features to your product.
04	get_revenue_acceleration_projections	This tool calculates your core incremental revenue and the timeline for growth based on your specific business levers.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Calculate the revenue growth if we implement AI features with a 5% pricing optimization, 10% sales productivity gain, and a 1,000,000 Euro market expansion.

The projected incremental revenue is 1,150,000 Euro with a growth timeline of 12 months.

- U** Is an investment of 200,000 Euro feasible for a project generating 500,000 Euro in incremental revenue?

Yes, the investment is feasible as the ratio is 0.4, which is below the threshold.

- U** What is the revenue lift for a 1,000,000 Euro base with a 15% sales productivity gain?

The sales lift is 150,000 Euro.

Frequently Asked Questions

01 What can this MCP actually calculate?

It calculates incremental revenue, growth timelines, investment feasibility, market capture, and sales productivity gains.

02 Which AI clients can I use this with?

You can use this with any MCP-compatible client, including Claude, Cursor, and Windsurf.

03 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you. You just connect and start using the tools.

04 How does it determine if an investment is feasible?

It compares the required investment for AI implementation against the projected revenue to see if it stays within your set limits.

05 Can I use this to plan sales team improvements?

Yes, you can use the sales productivity tool to measure the specific revenue lift from efficiency gains.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

`https://edge.vinkius.com/[TOKEN]/mcp`

CLIENT	WHERE TO CONFIGURE
 Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
 Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
 VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add <code>"ai-revenue-growth-accelerator": { "url": "..." }</code>
 Windsurf	MCP Settings → <code>mcp_settings.json</code> → Add endpoint URL
