Anniversary Planner MCP for event coordination.

Compare costs and logistics to pick the perfect celebration.

Anniversary Planner MCP helps you weigh different celebration ideas against your budget and schedule. Your AI client uses this tool to run cost comparisons, check if a plan fits your spending limit, and identify the physical resources or childcare you'll need to make the event happen.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Anniversary Planner MCP

4 tools available

Cloud-hosted on Vinkius

Planning a major anniversary shouldn't feel like a guessing game. This MCP gives your AI client the ability to act as a specialized event coordinator. Instead of manually calculating costs or forgetting about transport needs, you can hand these details to your agent. It handles the math and the logic. You can run multiple scenarios at once to see which one offers the best value without breaking the bank. It also looks ahead at the practical side of things, like whether you need to arrange a sitter or a car, so you aren't surprised on the day of the event. It's about moving from a vague idea to a concrete, actionable plan.

Core Capabilities

01 — Scenario Comparison

Your agent compares multiple plans to show differences in cost and complexity.

02 — Budget Enforcement

The AI checks if a specific plan stays under your set spending limit.

03 — Logistics Mapping

Your agent identifies necessary resources like transportation or childcare for a plan.

04 — Cost Calculation

The AI determines the total financial and time investment for any single scenario.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/anniversary-planner — connect your AI agent in three steps.

- 01
- Connect your MCP-compatible client to Vinkius.
- 02
- Describe your anniversary ideas to your AI agent.
- 03
- Ask the agent to calculate costs or compare different plans.
- 04
- Use the agent to check budget limits and logistical needs.

Connect your client to Vinkius and start planning immediately.

Built For

This is for anyone coordinating significant personal milestones who wants to avoid logistical surprises.

Event Coordinators

They hand off budget math and resource checklists to the AI.

Busy Professionals

They use the AI to quickly vet different celebration ideas against their schedule and wallet.

Family Planners

They rely on the AI to identify childcare or transport needs for family events.

What Changes When You Connect

- 01
- Side-by-side comparisons reveal the true cost of different plans.
- 02
- Budget validation prevents overspending before you commit.
- 03
- Logistical checks highlight hidden needs like transportation or childcare.

- 04 Direct cost and time calculations provide clear data for decision making.

Real-World Applications

Choosing a Destination

Compare a local getaway against a trip abroad to see the price and complexity difference.

Budget Management

Verify that a luxury dinner plan won't exceed your monthly celebration budget.

Logistics Planning

Identify if a specific event requires you to book a car or find a babysitter.

Scenario Optimization

Find the most cost-effective way to celebrate while meeting your specific requirements.

Patterns to Avoid

Vague planning without math

❌ AVOID

Asking your agent to just 'make a cool plan' without any specific constraints or budget numbers.

✓ INSTEAD

Provide specific spending limits and use ``calculate_scenario_total`` to get an exact look at the time and money required.

Ignoring hidden logistical needs

❌ AVOID

Booking a fancy dinner and assuming you'll just figure out the ride or the babysitter later.

✓ INSTEAD

Run ``get_logistical_requirements`` first to see if you actually need to book a car or a sitter.

Overspending on a single idea

❌ AVOID

Committing to a luxury trip before checking if it actually fits your monthly celebration budget.

✓ INSTEAD

Use ``validate_budget_compliance`` to ensure your chosen plan stays within your set spending limit.

The Right Fit

Connect this MCP if you are coordinating a major milestone and want to avoid logistical surprises. Do not connect it if you are just looking for generic gift ideas. The decision depends on whether you need to vet specific, actionable plans against a real budget and schedule.

Anniversary Planner MCP Tools

These tools handle the math, budget checks, and logistical planning for your milestone events.

#	TOOL	DESCRIPTION
01	calculate_scenario_total	This tool calculates the exact financial and time commitment for a specific plan.
02	compare_scenarios	Use this to see a side-by-side breakdown of different anniversary options.
03	get_logistical_requirements	This tool identifies the physical resources, such as transport or childcare, required for your plan.
04	validate_budget_compliance	This tool checks your chosen scenario against a specific spending limit to ensure you stay on track.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Compare the 'Staycation' and 'European Trip' scenarios.

The 'Staycation' costs \$500 with low complexity, while the 'European Trip' costs \$4,500 with high complexity.

U What is the total cost for scenario 'luxury_dinner_01'?

The total cost for the luxury dinner scenario is \$350.

U Will scenario 'beach_getaway' fit in a \$1,000 budget?

Yes, the beach getaway costs \$850, leaving you with \$150 remaining in your budget.

Frequently Asked Questions

01 What can this MCP do?

It allows your AI client to plan, compare, and budget different anniversary celebration scenarios.

02 How does it help with budgeting?

The MCP can calculate total costs and validate if a specific plan stays within your defined spending limit.

03 Does it handle logistics?

Yes, it can identify necessary physical resources like transport or childcare for your chosen scenario.

04 Can I compare two different plans?

Yes, you can use the comparison tool to see a side-by-side view of cost and complexity for multiple scenarios.

05 Which AI clients work with this MCP?

It works with any MCP-compatible client, including Claude, Cursor, Windsurf, and VS Code.

06 How do I compare two different plans?

Use the ``compare_scenarios`` tool by providing the unique IDs of the scenarios you want to evaluate side-by-side.

07 Can I check if a plan is too expensive?

Yes, use ``validate_budget_compliance`` with your maximum budget to see if the scenario is within your limits.

08 How are logistical needs identified?

The ``get_logistical_requirements`` tool analyzes the scenario to determine if you will need transport or childcare.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
