Artist Critique Session Planner MCP

Turn messy feedback into a structured roadmap for your art.

Artist Critique Session Planner MCP manages the entire lifecycle of a professional critique. It helps you set boundaries for reviewers, organize how you present your work, and converts the resulting feedback into a concrete list of technical tasks. You can use it within any MCP-compatible client to keep your sessions focused and productive.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Artist Critique Session Planner MCP

5 tools available

Cloud-hosted on Vinkius

Running a critique session shouldn't feel like a chaotic conversation. This MCP gives you a framework to control the room. You can set specific boundaries so reviewers don't wander into areas you aren't ready to discuss, like composition when you only want feedback on color. It handles the logistics of the session, from timing the discussion to deciding which piece to show first. Once the session ends, you aren't left with a pile of vague notes. The MCP helps you translate what people said into a real plan of action. It's built to keep your creative process organized and ensures that every minute spent talking about your work leads to a specific improvement in your practice.

Core Capabilities

01 — Session Scheduling

Your agent uses this to build timed agendas for specific time blocks.

02 — Reviewer Guidance

Your agent generates briefing documents to set boundaries for critics.

03 — Presentation Logic

Your agent organizes the order of your artworks to improve the flow of discussion.

04 — Feedback Capture

Your agent uses templates to record and organize incoming critiques.

05 — Task Conversion

Your agent turns verbal feedback into a list of actionable technical steps.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/artist-critique-session-planner — connect your AI agent in three steps.

- 01 Connect your preferred client like Claude or Cursor to the MCP via Vinkius.
- 02 Tell your agent your session goals, time limits, and the number of artworks.
- 03 Generate your agenda and reviewer briefing documents.
- 04 Use the capture tool during the session to record feedback.
- 05 Ask your agent to turn those notes into a concrete action plan.

Connect your client to Vinkius and start planning your session immediately.

Built For

This MCP is designed for visual artists who need a structured way to get professional feedback. It's for anyone who wants to move past vague comments and into actionable growth.

Fine Artists

They use the MCP to prepare for formal critiques with mentors or peers.

Art Students

They use it to organize their work presentations and track instructor feedback.

Art Educators

They use it to structure critique sessions for their classes.

What Changes When You Connect

- 01 Prevents off-topic feedback by setting clear reviewer boundaries.

-
- 02 Maximizes session time with timed, structured agendas.

 - 03 Converts subjective opinions into objective technical tasks.

 - 04 Organizes the presentation flow to better tell your story.

-

Real-World Applications

Formal Mentor Meetings

Prepare a briefing for your mentor so they focus only on the technical areas you want to improve.

Peer Group Critiques

Use the agenda tool to ensure a group of artists stays on track during a timed session.

Post-Critique Planning

Turn a long list of comments from a gallery review into a specific list of things to practice in the studio.

Portfolio Reviews

Sequence your best works in an order that builds a strong narrative for the reviewer.

Patterns to Avoid

Unstructured feedback sessions

❌ AVOID

You jump into a critique without any plan and let the conversation drift into irrelevant topics like your choice of brushes.

✓ INSTEAD

Use ``prepare_reviewer_briefing`` to set specific boundaries for your critics before the session starts.

Running out of time

❌ AVOID

You spend forty minutes on your first painting and realize you have no time left to show the rest of your portfolio.

✓ INSTEAD

Run ``generate_critique_agenda`` to create a timed schedule that covers every piece you need to discuss.

Vague post-critique notes

❌ AVOID

You walk away from a mentor meeting with a notebook full of messy, subjective comments that don't help you improve.

✓ INSTEAD

Use ``plan_next_actions`` to convert those opinions into a concrete list of technical tasks for your next studio session.

The Right Fit

Connect this MCP if you are a visual artist or educator who needs to turn subjective critiques into actionable technical progress. Do not connect it if you prefer unstructured, free-form conversations without specific goals. The deciding factor is whether you want your feedback sessions to result in a practical roadmap or just a collection of opinions.

Artist Critique Session Planner Tools

These tools manage the entire lifecycle of a critique, from setting the agenda to turning verbal feedback into a studio roadmap.

#	TOOL	DESCRIPTION
01	format_response_capture	This tool provides a structured template to record feedback as it happens. It keeps your notes organized so you don't miss anything important.
02	generate_critique_agenda	This tool builds a timed schedule for your session. It ensures you cover all your pieces without running out of time.
03	plan_next_actions	This tool converts the feedback you received into a concrete list of tasks. It turns opinions into a practical roadmap for your next studio session.
04	prepare_reviewer_briefing	This tool creates a guidance document for your critics. It tells them exactly what to focus on and what topics to avoid.
05	sequence_work_presentation	This tool determines the best order to show your artworks. It helps you control the narrative flow of the critique.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I have 3 paintings to discuss in a 45-minute session. I want a conversational style. Can you make an agenda?

Here is your 45-minute conversational agenda: 1. Introduction (5 mins), 2. Painting A Discussion (12 mins), 3. Painting B Discussion (12 mins), 4. Painting C Discussion (12 mins), 5. Wrap-up (4 mins).

U Help me prepare my reviewers. I want to ask about color usage, but I do NOT want any feedback on my composition.

Reviewer Briefing: Focus on color usage. WARNING: Do not provide feedback on composition.

U I received feedback that my lighting is too harsh and my textures need more detail. My goal is technical improvement. What should I do next?

Action Plan: 1. Practice soft-light blending techniques. 2. Study high-detail texture studies. 3. Re-evaluate lighting setups for upcoming works.

Frequently Asked Questions

01 How do I use this with Claude?

You connect to the MCP through the Vinkius platform. Once connected, your agent in Claude will automatically see the tools available for planning and capturing critiques.

02 Can I prevent reviewers from talking about certain topics?

Yes. You can use the `prepare_reviewer_briefing` tool to explicitly state what you want them to focus on and what topics they should avoid.

03 Does this help me actually improve my art?

It helps by using the `plan_next_actions` tool to translate vague feedback into specific, technical tasks you can work on in your studio.

04 Do I need to host this myself?

No. Vinkius hosts the MCP for you. You just connect your client and it works.

05 Can I use this for a single painting or a whole series?

You can use it for both. The tools allow you to sequence individual works or manage a timed agenda for a larger collection.

06 How does this tool help manage feedback boundaries?

The `'prepare_reviewer_briefing'` tool allows you to explicitly list topics to avoid, ensuring reviewers respect your defined constraints.

07 Can I customize the session timing?

Yes, using `'generate_critique_agenda'`, you can specify the total duration and the number of works to create a balanced schedule.

08 How do I turn feedback into actual work?

The `'plan_next_actions'` tool analyzes your captured feedback and translates it into specific, measurable tasks oriented toward your goal.
