author-readiness-release-plan MCP for creators.

Move your manuscript from finished draft to market ready.

author-readiness-release-plan is a strategic tool for authors and publishers to manage the transition from a completed work to a public launch. It handles the heavy lifting of checking legal rights, auditing necessary assets, and organizing the handoff between collaborators so nothing gets missed before your release date.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

author-readiness-release-plan MCP

5 tools available

Cloud-hosted on Vinkius

You've finished the writing, but the path to publication is often a mess of legal checks and missing files. This MCP acts as your release coordinator. Instead of guessing if you have the right rights for a specific distributor or if your cover art is ready for print, you can ask your AI client to run a full audit. It looks at your legal standing to suggest the best distribution channels and checks your supplemental materials to see what's actually missing. You can also use it to map out exactly when to talk to your editor, designer, or printer. It takes the guesswork out of the final stretch, ensuring your messaging hits the right audience and your launch checklist is actually complete before you hit publish.

Core Capabilities

01 — Distribution Planning

Your agent uses legal and technical data to pick the right channels.

02 — Asset Auditing

The AI identifies missing files or materials needed for your chosen route.

03 — Collaborator Coordination

It maps out the sequence of handoffs between you and your team.

04 — Messaging Strategy

Your agent builds a plan to reach your specific readers.

05 — Launch Validation

It generates a final checklist to confirm you are ready to go live.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/author-readiness-release-plan — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Provide your project details and legal rights to your agent.
- 03 Run tools to audit assets and plan distribution paths.
- 04 Generate schedules and checklists to finalize the launch.

Connect your AI client to Vinkius and start planning your release immediately.

Built For

This MCP is built for creative professionals moving from the drafting phase to the commercial phase.

Independent Authors

You provide your manuscript status and rights ownership to get a release roadmap.

Publishing Managers

You feed in asset lists to identify gaps in production workflows.

Creative Project Managers

You use the tool to coordinate timing between various freelancers and vendors.

What Changes When You Connect

- 01 Reduces missed steps in the publishing workflow.
- 02 Matches distribution channels to your specific legal rights.
- 03 Organizes collaborator interactions into a clear schedule.

04 Provides a final verification step before launch.

Real-World Applications

Self-Publishing Roadmap

An author uses the tool to decide between selling via their own site or using major digital platforms.

Print Production Prep

A creator checks which physical assets, like ISBNs or print-ready files, are still required.

Team Coordination

A project lead generates a schedule to manage handoffs between editors and designers.

Pre-Launch Audit

A publisher runs a final checklist to ensure all legal and digital assets are ready for the public.

Patterns to Avoid

Ignoring legal constraints

❌ AVOID

You pick a distribution channel based on popularity without checking if you actually own the rights for that platform.

✓ INSTEAD

Run ``evaluate_release_path`` first to align your distribution choices with your actual legal standing.

Assuming assets are ready

❌ AVOID

You schedule a print run assuming your cover art and ISBNs are finalized and ready for the printer.

✓ INSTEAD

Use ``audit_asset_readiness`` to identify exactly which files are missing before you commit to a production timeline.

Uncoordinated team handoffs

❌ AVOID

You tell your designer to start work without knowing if the editor has finished the final proofs.

✓ INSTEAD

Build a structured timeline using ``generate_handoff_schedule`` to keep your freelancers in sync.

The Right Fit

Connect this MCP if you are moving a creative project from drafting to commercial release. If you are still in the middle of writing or haven't considered distribution, you don't need this yet. The deciding factor is whether you have a finished manuscript and need to manage the logistics of a launch.

5 Essential Tools for Author Readiness and Release Planning

These tools handle the transition from a finished manuscript to a live product. They manage everything from legal rights audits to collaborator schedules.

#	TOOL	DESCRIPTION
01	create_communication_plan	It develops a messaging strategy tailored specifically to your target audience.
02	evaluate_release_path	This tool checks your legal rights and technical constraints to find the best way to distribute your work.
03	generate_handoff_schedule	It builds a timeline for when you need to interact with editors, designers, and other collaborators.
04	generate_readiness_checklist	This tool produces a final validation list to confirm everything is set for your launch.
05	audit_asset_readiness	This tool scans your project to see which supplemental materials are finished and which ones you still need to create.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U I have finished my novel. I own all rights and want to publish on digital platforms or via my own website. My audience is young adult readers.

Based on your rights and preferences, the recommended routes are Digital Platforms and Direct Tier (personal website).

U What assets do I need for a Physical Print release?

For a Physical Print route, you will typically require print-ready files and an assigned ISBN.

U Check if I am ready to launch. I have completed the digital assets and the legal team has signed off.

All requirements are met. Your work is ready for launch.

Frequently Asked Questions

01 How does this MCP help with book publishing?

It provides tools to evaluate distribution paths, audit necessary assets, and schedule collaborator handoffs.

02 Can I use this with Claude or Cursor?

Yes, you can connect this MCP to any MCP-compatible client like Claude, Cursor, or Windsurf through Vinkius.

03 Does it help with legal rights?

Yes, the `evaluate_release_path` tool uses your legal rights to determine which distribution channels are viable.

04 What happens if I am missing assets?

The `audit_asset_readiness` tool will identify exactly which supplemental materials are missing for your chosen release route.

05 Is there a way to check if I am ready to publish?

You can use the `generate_readiness_checklist` tool to get a final validation list before you launch.

06 How does the engine decide on a release route?

The `'evaluate_release_path'` tool analyzes your current `'rightsStatus'` and compares it against your `'preferredRoutes'`. It will only recommend routes that you have the legal authority to use.

07 Can I use this to manage my marketing?

Yes, the `'create_communication_plan'` tool helps formulate a messaging strategy and identifies primary channels based on your target audience and success measures.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
