

MCP SERVER

NO CODE

CLOUD HOSTED

Axonaut MCP for AI Agents

Manage invoices, quotes, expenses, and CRM records easily

Axonaut connects your AI agent directly to your entire business administration stack. It lets you query, audit, and manage complex data—from invoices and quotes to team tasks and customer records—all through natural conversation. Stop clicking through dense menus; simply ask your agent to find that unpaid invoice or list all contacts associated with a specific project.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Axonaut MCP

12 tools available

Cloud-hosted on Vinkius

Managing a business with an ERP can feel like navigating a labyrinth. You have dozens of tabs, complex forms, and data scattered across modules. Axonaut solves this by acting as the single brain for your operations. By connecting this MCP through Vinkius, you give your AI client direct access to all core functions: CRM contact lists, financial records, project tasks, and more. Instead of manually generating reports or clicking into five different sections just to audit a few unpaid invoices, you talk to your agent. Your agent handles the heavy lifting—retrieving company details, auditing expense logs, listing active quotations, and even setting up follow-up tasks. It turns complex organizational management into a straightforward conversation.

Core Capabilities

01 — Audit Financial Records

The agent can pull comprehensive lists of invoices, quotes, expenses, and orders to check financial status quickly.

03 — Track Project Progress

The agent lists and creates tasks, keeping your team's project timelines moving forward without manual entry.

02 — Manage Client Relationships

You can list all companies or search for specific contacts using simple text queries.

04 — View Product & Order Data

Retrieve the full product catalog details or list all active orders associated with a client.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/axonaut — connect your AI agent in three steps.

- 01 Subscribe to this MCP and paste your Axonaut API Key.
- 02 Connect it to your preferred AI agent (Claude, Cursor, etc.).
- 03 Ask your agent natural language questions, like 'Show me all unpaid invoices from the last quarter.' The agent executes the query and returns a clean, summarized answer.

The bottom line is you get a conversational layer on top of your existing ERP data.

Built For

This MCP is essential for small business owners who feel overwhelmed by their own software. It's perfect for the ops manager tired of spending hours cross-referencing dashboards, or the accountant who needs immediate access to financial data without opening multiple reports.

Accountant

Retrieves lists of invoices, expenses, and product metadata rapidly for quick audits.

Operations Manager

Manages team task backlogs and ensures project milestones are tracked without logging into the core system.

Sales Representative

Quickly lists active quotations, checks company details, and updates contact information directly from the chat interface.

What Changes When You Connect

- 01 Stop manually auditing financial data. You can ask your agent to list all unpaid invoices or check the total value of outstanding quotations instantly.

-
- 02 Never lose track of a client relationship again. Use `list_contacts` and `list_companies` to get a full view of every associated person, right in the chat window.

 - 03 Keep projects on schedule without opening the task dashboard. Your agent handles listing tasks and creating new ones with deadlines when you need them most.

 - 04 Streamline your finance review process by calling `list_expenses` or retrieving product metadata via `list_products`, giving accountants instant access to data points.

 - 05 Avoid context switching entirely. You can manage client records (`list_companies`) and immediately follow up by creating a task for the sales team, all in one conversation.
-

Real-World Applications

The Quarterly Financial Health Check

An accountant needs to know the total financial standing. They ask their agent to list invoices and quotes from Q3. The agent consolidates the data, identifying which payments are overdue without requiring any manual report generation.

The Overflowing To-Do List

An operations manager realizes a project is slipping. Instead of digging through the dashboard, they ask their agent to `list_tasks`, see who's blocked, and immediately `create_task` follow-ups for specific team members.

Onboarding a New Client

A sales rep meets 'TechCorp' and needs background info. They ask their agent to `get_company` details, instantly pulling up contact lists (`list_contacts`) and checking for any outstanding quotes or orders.

Inventory Reconciliation

A finance lead needs to compare sales against available inventory. They can ask the agent to `list_products` and then cross-reference that data with active orders (`list_orders`) in a single query.

Patterns to Avoid

Manual Data Cross-Referencing

X AVOID

Trying to compile a report by exporting customer lists, then opening the invoice module, and manually matching IDs. This takes hours and is prone to human error.

✓ INSTEAD

Just ask your agent for it. Tell it: 'List all invoices associated with company X.' The MCP handles the cross-referencing automatically.

Forgetting Task Deadlines

X AVOID

Writing down a follow-up task on a sticky note and forgetting to log it in the system until it's too late.

✓ INSTEAD

Use `create_task`. You can tell your agent: 'Create a task for Jane next Tuesday to call TechCorp.' It logs it correctly.

Guessing Account Status

X AVOID

Assuming a client is active or checking account status by browsing multiple menus until you find the right record.

✓ INSTEAD

Use `get_account_check` first. This verifies system health and ensures your agent has the latest user context to work with.

The Right Fit

Use this MCP if your business operations require frequent, complex data synthesis across multiple functional areas—finance, CRM, and project management. If you spend more than 20 minutes a week switching between different software tabs just to compile one report, you need this. Don't use it if you only ever need to read one simple list (like checking the address of one company). For single-purpose tasks, a dedicated listing tool might suffice. But for true oversight—auditing expenses alongside quotes and updating associated contacts—this MCP is necessary.

Axonaut MCP for AI Agents: Streamlining Financial Auditing

Right now, auditing a client's financial status means opening the invoicing module, filtering by date range, then separately pulling reports on expenses and quotes. You copy IDs from one screen to another, hoping you don't miss an outstanding balance or an incorrectly logged expense.

With this MCP, your agent handles it all. Just ask: 'What are the open financial items for TechCorp?' It pulls data from invoices, list_quotations, and list_expenses simultaneously, giving you a single, summarized answer right in the chat window.

Axonaut MCP for AI Agents: Centralizing CRM Data

Manually maintaining client data means jumping between company profiles, contact directories, and project dashboards. You have to remember which person is linked to which contract, and if that contact has an active task associated with them.

Now you can ask the agent for a comprehensive view. It uses list_companies and list_contacts together, providing not just names, but the full context of their relationship—including any pending orders or tasks.

Axonaut: 12 Tools for Financial and CRM Operations

Coordinate complex business data points—from client contacts to financial reports—with these specialized tools.

#	TOOL	DESCRIPTION
01	<code>create_task</code>	Creates a new task within Axonaut with a set description and deadline.
02	<code>get_account_check</code>	Verifies the connection status and retrieves current user account details for system integrity checks.
03	<code>get_company</code>	Retrieves specific, detailed information for one company by name or ID.
04	<code>list_companies</code>	Generates a list of all companies recorded in the Axonaut system.
05	<code>list_contacts</code>	Provides a full directory listing of every contact associated with the account.
06	<code>list_expenses</code>	Pulls a list detailing all submitted and recorded expenses.
07	<code>list_invoices</code>	Retrieves an auditable list of all generated invoices, including status and dates.
08	<code>list_orders</code>	Generates a comprehensive list of all recorded client orders.
09	<code>list_products</code>	Lists every product available in the company's catalog.
10	<code>list_projects</code>	Pulls a list of all ongoing projects and their associated milestones.
11	<code>list_quotations</code>	Generates an auditable list of all pending or completed sales quotations (quotes).
12	<code>list_tasks</code>	Lists existing tasks, showing who they are assigned to and when they are due.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What's our financial standing with Acme Corp?

Acme Corp Financial Summary

- **Invoices:** 3 total (2 paid, 1 unpaid).
- **Outstanding Balance:** €4,500.
- **Quotes Pending:** One quote for €800 is awaiting approval.
- **Latest Expenses Logged:** €1,200 this month.

You need to approve that quote to get the job moving.

U I have a new client. Can you set up a follow-up task for next week?

Task Created Successfully

The task, 'Initial follow-up call with TechCorp,' is scheduled for **Next Tuesday**. I've also updated their contact record to show the owner of this task.

Reminder: Don't forget to check list_products before sending any final quote.

U List all companies that have an active project and haven't paid an invoice yet.

Unpaid Active Clients

COMPANY NAME	PROJECT STATUS	DUE INVOICE AMOUNT
Global Solutions	Active	€12,500
Beta Tech Inc.	Planning	€3,100

Action needed: Send follow-up emails to these contacts.

Frequently Asked Questions

01 How do I use the Axonaut MCP for AI Agents to audit my invoices?

You simply ask your agent, 'List all unpaid invoices.' It pulls the list directly from Axonaut and shows you key details like amounts and due dates. This eliminates manual report generation entirely.

02 Does Axonaut MCP for AI Agents help with client contact management?

Yes, it gives your agent full access to list all contacts and companies. You can search or request lists of people associated with a specific company record instantly.

03 Is the Axonaut MCP for AI Agents better than manually checking my dashboard?

Absolutely. Instead of navigating multiple dashboards, you use natural language to ask your agent questions that pull data from invoices, tasks, and quotes all at once. It's a single conversation instead of dozens of clicks.

04 What if I need to create follow-up actions? Can Axonaut MCP for AI Agents do that?

Yes. You can instruct your agent to create tasks for team members, setting specific descriptions and deadlines right from the chat. It logs it immediately in Axonaut.

05 Can I check product details and link them to existing orders using this MCP?

Yes. You can ask your agent to list products and cross-reference that data with active orders, helping you verify if everything needed for fulfillment is accounted for.
