# Baby Shower Planner MCP.

Handle all your event logistics through a single chat interface.

Baby Shower Planner MCP handles the heavy lifting of event coordination. It uses your guest count to scale food quantities, decor needs, and activity schedules. Instead of manually calculating how many sandwiches or favors you need, your AI client uses this MCP to generate precise blueprints and timelines for your event.

**A+** Quality Score 100/100

# The connectivity layer between AI and the world's software.

---

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

# Your AI Connections Run Through Vinkius Cloud

The world's largest  
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

*The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*

— Architecture principle

---

## Four Pillars of the Vinkius Runtime

### 01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

### 03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

### 02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

### 04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

**AES-256**

Encryption at rest

**Ed25519**

PKI vault signatures

**24h TTL**

Ephemeral session keys

**V8 Isolate**

Sandboxed execution

---

## One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

**MCP ENDPOINT**`https://edge.vinkius.com/{token}/mcp`

## Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

**01 — Ed25519 PKI Vault**

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

**02 — V8 Isolate Sandboxing**

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

### 03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

### 05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

### 04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

### 06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

## Emergency Kill Switch

EU AI Act Art. 14(1)  
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

#### 01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

#### 02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

#### 03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

## Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

**Control Plane**

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

**FinOps**

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

**Firewall & DLP**

PII redaction activity, sensitive data protection counters, and security event timeline.

**Agent Activity**

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

**Tool Health**

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

**Incident Log**

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

# Baby Shower Planner MCP

5 tools available

Cloud-hosted on Vinkius

Planning a baby shower involves a lot of moving parts that are easy to mess up. This MCP acts as a logistics engine that connects your AI client to specific event planning math. You don't have to guess how much food to order or how to structure the afternoon. You provide the guest count and the theme, and the MCP calculates the requirements for you. It handles the scaling of catering, the selection of games, and the creation of a chronological schedule. You can move from a rough idea to a complete event blueprint in a few prompts. It's built to take the guesswork out of quantities and timing so you can focus on the guests.

---

## Core Capabilities

### 01 — Catering Math

The AI calculates exact food and drink amounts based on your guest list.

### 02 — Schedule Creation

Your agent builds a minute-by-minute timeline for the party.

### 03 — Theme Scaling

The MCP adjusts decor and favor lists to match your chosen aesthetic.

### 04 — Activity Planning

The AI suggests specific games to keep the event moving.

### 05 — Master Planning

The tool generates a full event blueprint from a single prompt.

# One Click on Vinkius — From Prompt to Execution

Available at [vinkius.com/en/ai-agent-connect/baby-shower-planner](https://vinkius.com/en/ai-agent-connect/baby-shower-planner) — connect your AI agent in three steps.

- 01 Connect the MCP to your preferred AI client via Vinkius.
- 02 Tell your AI client the guest count, budget, and theme.
- 03 Request specific plans like catering amounts or event timelines.
- 04 Review the generated blueprints and lists in your chat window.

You connect the MCP to your AI client and start chatting to build your plan.

## Built For

This MCP is for anyone tasked with organizing a baby shower who wants to avoid manual math and scheduling errors.

### Event Hosts

Friends or family members who hand off the logistics math to their AI client.

### Party Planners

Professionals who use the MCP to quickly generate blueprints and catering lists for clients.

### Family Coordinators

People managing large family gatherings who need precise timelines and supply lists.

# What Changes When You Connect

- 01 Eliminates guesswork in food and drink quantities.
- 02 Automates the creation of event schedules.
- 03 Scales decor and favor lists to match guest counts.
- 04 Centralizes all planning tasks into one chat interface.

## Real-World Applications

### Budget-Conscious Planning

Use the MCP to allocate a specific dollar amount across food, decor, and games.

### Time Management

Create a structured timeline to ensure the party stays on track.

### Themed Events

Generate decor and favor lists that match a specific style like Boho or Tea Party.

### Catering Prep

Get exact counts for finger foods and pastries to prevent waste.

## Patterns to Avoid

### Guessing food quantities

❌ AVOID

You tell your agent to order food for 50 people without knowing how much each person actually eats.

✓ INSTEAD

Use `calculate_catering_requirements` to get specific food and drink counts based on your actual guest list.

### Vague event scheduling

❌ AVOID

You ask for a general idea of when things happen without a specific time structure.

✓ INSTEAD

Run `construct_event_timeline` to build a minute by minute schedule that keeps the party on track.

---

## Disconnected theme planning

### ❌ AVOID

You buy decorations that don't match the guest favors or the overall party vibe.

### ✓ INSTEAD

Use `generate_decor_and_favor_list` to ensure your supplies and decor stay consistent with your chosen theme.

---

## The Right Fit

Connect this MCP if you need to turn a guest count into a concrete logistics plan. Do not use it if you are just looking for general party inspiration. The decision depends on whether you need exact quantities and a strict timeline.

# Baby Shower Planner MCP Tools

These tools handle the math, timing, and logistics for your event. They turn guest counts and themes into actionable lists and schedules.

| #  | TOOL                            | DESCRIPTION                                                                                                                 |
|----|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 01 | construct_event_timeline        | This tool builds a chronological schedule for your event. It maps out exactly when activities and meals should happen.      |
| 02 | generate_decor_and_favor_list   | This tool produces a list of necessary decorations and guest favors. It helps you track what you need to buy for the theme. |
| 03 | generate_event_blueprint        | This tool creates a complete master plan for the baby shower. It serves as the central document for your entire event.      |
| 04 | plan_entertainment_and_games    | This tool suggests specific games and activities. It helps you keep guests engaged throughout the party.                    |
| 05 | calculate_catering_requirements | This tool provides a detailed breakdown of food and drink quantities. It scales amounts based on your specific guest count. |

---

## See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

**U** Plan a baby shower for 20 guests with a budget of \$500 and a Boho theme.

I have generated your Boho-themed baby shower blueprint for 20 guests. Your budget is allocated with \$250 for food, \$100 for decor, \$50 for favors, \$50 for games, and \$50 for gifts. The plan includes a list of finger foods, boho decorations, and a 3-hour timeline.

**U** How much food do I need for a tea party with 15 guests?

For a tea party with 15 guests, you will need approximately 45 finger sandwiches, 30 mini scones, and 15 servings of assorted pastries.

**U** Create a timeline for a 2-hour event with Arrival, Food, and Games.

Your 2-hour schedule is: 0:00-0:30 Arrival, 0:30-1:15 Food, and 1:15-2:00 Games.

---

## Frequently Asked Questions

### 01 How does this MCP help with food planning?

It uses the `calculate_catering_requirements` tool to provide a detailed breakdown of food and drink quantities based on your guest count.

### 02 Can I plan a themed party with this?

Yes, the MCP can generate decor and favor lists that align with your specific theme.

---

**03 What AI clients can I use with this MCP?**

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

---

**04 Does it create a schedule?**

Yes, the `construct_event_timeline` tool generates a chronological schedule for your event.

---

**05 How do I get a full plan?**

You can use the `generate_event_blueprint` tool to create a complete master plan for the shower.

---

**06 How do I create a full event plan?**

You can use the ``generate_event_blueprint`` tool to create a comprehensive plan covering budget, food, decor, and a timeline based on your guest count.

---

**07 Can I plan specific catering needs?**

Yes, the ``calculate_catering_requirements`` tool provides detailed food and drink quantities based on your guest count and chosen event style.

---

**08 How are decorations and favors handled?**

The ``generate_decor_and_favor_list`` tool calculates the necessary items and scales favors to match your guest count.
