Beauty Basket Total MCP handles pricing.

Get instant, accurate beauty product cost breakdowns and tax calculations.

Beauty Basket Total MCP gives your AI client the ability to manage beauty product pricing and shopping basket math. It handles everything from individual unit costs based on product tiers to complex regional tax calculations and full financial summaries. You can use it to get precise subtotals or complete grand totals for any beauty product order.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Beauty Basket Total MCP

4 tools available

Cloud-hosted on Vinkius

You can hand off all the tedious math involved in beauty product pricing to your AI client. This MCP provides the specific tools needed to pull unit prices for different product tiers and run through the entire checkout calculation process. Instead of manually calculating tax or summing up items, you just tell your agent what is in the basket and where the customer is located. It handles the subtotalling, applies the correct regional tax, and spits out a final grand total. It is built to take the guesswork out of beauty industry pricing workflows, making it easy to generate accurate financial summaries for orders without leaving your chat interface.

Core Capabilities

01 — Tiered Pricing Lookup

Your agent uses this to find the exact cost of a product based on its specific tier.

02 — Subtotal Calculation

Your AI client uses this to add up multiple items before tax is applied.

03 — Regional Tax Application

Your agent uses this to find the correct tax amount for a specific location.

04 — Financial Summaries

Your AI client uses this to generate a complete breakdown of subtotals, taxes, and grand totals.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/beauty-basket-total — connect your AI agent in three steps.

- 01 Connect the Beauty Basket Total MCP to your AI client via Vinkius.
- 02 Ask your agent to find a product price using a specific tier.
- 03 Request a subtotal for the items in your basket.
- 04 Provide a location to calculate the appropriate regional tax.
- 05 Ask for a full basket summary to see the final grand total.

You connect the MCP to your client and start asking for pricing data.

Built For

This MCP is for professionals managing beauty product inventories or e-commerce order calculations.

E-commerce Managers

They hand off basket math and tax calculations to their AI agent.

Beauty Industry Analysts

They use the tool to quickly check product pricing across different tiers.

Customer Support Agents

They use the MCP to provide customers with accurate order summaries and totals.

What Changes When You Connect

- 01 Removes manual math errors from beauty product pricing.
- 02 Automates regional tax calculations based on user location.

- 03** Provides instant financial breakdowns for any basket configuration.

Real-World Applications

Order Verification

Check the accuracy of a customer's shopping basket before finalizing a sale.

Tiered Pricing Audits

Verify that products are being priced correctly according to their specific tiers.

Tax Compliance Checks

Ensure the correct regional tax is applied to a subtotal for a specific location.

Quick Quote Generation

Generate a full summary of costs for a client including tax and grand totals.

Patterns to Avoid

Manual pricing math

❌ AVOID

You try to manually add up every item in a customer's cart and then guess the tax rate for their state.

✓ INSTEAD

Let your agent handle the math by using ``calculate_basket_subtotal`` and ``calculate_regional_tax`` to get exact numbers.

Ignoring product tiers

❌ AVOID

You assume every bottle of shampoo costs the same regardless of whether it is a wholesale or retail item.

✓ INSTEAD

Use ``get_product_price`` to pull the correct unit cost based on the specific tier assigned to that product.

Fragmented order reporting

❌ AVOID

You send a customer a messy list of prices and tax amounts that doesn't clearly show the final total.

✓ INSTEAD

Run ``get_basket_summary`` to provide a clean, professional breakdown of the subtotal, tax, and grand total.

The Right Fit

Connect this MCP if you manage beauty e-commerce orders or inventory pricing where tiered costs and regional taxes are constant variables. Do not connect it if you only deal with flat-rate pricing and single-region sales. The decision depends on whether your pricing logic requires multi-tier lookups and location-based tax math.

Beauty Basket Total 4 Tools

These tools handle everything from individual unit pricing to final tax calculations and full order summaries.

#	TOOL	DESCRIPTION
01	calculate_basket_subtotal	This tool sums up the prices of all items in a basket before any taxes are applied.
02	calculate_regional_tax	This tool determines the specific tax amount for a subtotal based on a user's location.
03	get_basket_summary	This tool provides a full financial breakdown including the subtotal, tax, and the final grand total.
04	get_product_price	This tool retrieves the unit price for a specific product depending on its assigned tier.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U How much does product B001 cost in the Premium tier?

The unit price for product B001 in the Premium tier is \$45.00.

U Calculate the subtotal for 2 units of B001 and 1 unit of B002.

The subtotal for your items is \$110.00.

U Give me a summary for 3 units of B001 in the USA.

Subtotal: \$135.00, Tax: \$11.48, Grand Total: \$146.48.

Frequently Asked Questions

01 How do I use this MCP with Claude?

You connect to the MCP through the Vinkius platform, which then makes the tools available to your AI client.

02 Can this MCP handle different tax rates?

Yes, the `calculate_regional_tax` tool determines the tax amount based on the user's location.

03 Does it support tiered pricing?

Yes, the `get_product_price` tool retrieves prices based on the product's specific tier.

04 What kind of summary can I get?

The `get_basket_summary` tool provides a full breakdown including the subtotal, tax, and the grand total.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP so it is ready to use immediately after connection.

06 How do I check the price of a specific item?

You can use the ``get_product_price`` tool by providing the product code and the desired tier (Standard, Premium, or Luxury).

07 Can I calculate the total cost including tax?

Yes, the ``get_basket_summary`` tool provides a full breakdown including the subtotal, the applied tax, and the final grand total for your region.

08 Which regions are supported for tax calculation?

Currently, the system supports tax calculations for the USA and Europe.
