

MCP SERVER

NO CODE

CLOUD HOSTED

BoardEffect MCP for AI Agents

Manage Board Governance and Corporate Records

BoardEffect connects your board governance systems directly to any AI agent. It lets you manage everything from tracking meeting schedules and accessing committee documents to reviewing member directories—all through natural conversation. Instead of logging into multiple portals, your agent pulls all the necessary data right where you are working.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

BoardEffect MCP

10 tools available

Cloud-hosted on Vinkius

Managing a corporate board involves juggling dozens of moving parts: committee minutes, contact lists, historical resolutions, and current meeting agendas. Doing this manually means clicking between five or six different portals just to get an overview. This MCP changes that.

By connecting your BoardEffect account, you let your agent pull all the necessary governance data into a single stream. Need to check who chaired last quarter's audit committee? Ask your agent. Want to know which workroom holds the Q3 budget documents and list them for review? Just ask. It retrieves that information immediately.

Your AI client handles the heavy lifting, gathering details like member profiles, listing all board meetings, or tracking recent surveys without you having to build complex reports. This entire capability is available through Vinkius, giving your agent access to thousands of specialized business tools.

Core Capabilities

01 — Reviewing Board Members and Contacts

You can list all board members or retrieve detailed contact information for a specific individual.

02 — Tracking Meeting Schedules and Details

The MCP lists upcoming meetings, retrieves agendas, and fetches full details on any past session.

03 — Accessing Committee Documents

You can list all committee workrooms and pull the specific documents or archives stored within them.

04 — Monitoring Governance Feedback

The system allows you to retrieve records of board surveys, polls, and formal corporate resolutions.

05 — Retrieving Historical Records

You can list and access historical archives containing past board decisions and projects.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/boardeffect — connect your AI agent in three steps.

- 01 Subscribe to this MCP on Vinkius.
- 02 Enter your BoardEffect API Token and Subdomain details into the connection setup.
- 03 Start giving commands to your agent in Claude, Cursor, or any compatible client.

The bottom line is: you tell your AI agent what board information you need, and it handles connecting, authenticating, and retrieving that data for you.

Built For

This MCP targets corporate governance professionals, board administrators, and executives who spend too much time navigating complex, siloed internal portals. If your job involves tracking compliance records or coordinating across multiple committees, this is for you.

Corporate Secretary

You use the MCP to monitor document archives and retrieve historical board records without manually searching through file shares.

Board Administrator

You manage compliance by quickly checking meeting schedules, member details, and governance survey statuses straight from your workflow tools.

Executive Board Member

You use the MCP to pull current board member information or summarize key points from past meetings using natural language prompts.

What Changes When You Connect

- 01 Get a complete picture of board operations. You can list all meetings, members, documents, polls, and surveys from one place without jumping between tabs.

-
- 02** Stop wasting time on manual data gathering. Your agent handles the retrieval process—whether you need to use `list_members` or `get_meeting`—and presents it conversationally.
-
- 03** Simplify compliance checks. Need to track historical votes? Use `list_archives` and get immediate access to past board records, saving hours of manual searching.
-
- 04** Coordinate committee workrooms easily. You can list all committees using `list_workrooms`, then ask for the specific documents inside them using `list_documents`.
-
- 05** Improve decision tracking. Instead of hunting through emails for feedback, your agent pulls results from polls and surveys directly by listing them.
-

Real-World Applications

Preparing for an Audit Committee Meeting

A board administrator needs to prepare for the next audit committee meeting. They ask their agent to list all workrooms, then specifically pull documents from the 'Audit' workroom and check the status of recent governance surveys using `list_surveys`.

Reviewing Board History

A corporate secretary needs context on a policy change from two years ago. They use their agent to list archived board records with `list_archives` and retrieve the resolution details for review.

Updating Member Contact Lists

An executive needs a current roster. They prompt their agent to list all board members, then request detailed contact information for three specific people using `get_member`, ensuring the records are up to date before an annual call.

Patterns to Avoid

Assuming all data is in one place

✗ AVOID

A user tries to find a committee's latest budget by searching only email archives, missing the official document stored in the board portal.

✓ INSTEAD

Instead, ask your agent to first use `'list_workrooms'` to identify the correct committee space, then run `'list_documents'` on that specific workroom to find the current files.

Confusing meeting details with member roles

✗ AVOID

A user asks for a summary of 'Sarah Miller's attendance at the Q2 meeting,' but only gets general member info, not the specific date or role in that session.

✓ INSTEAD

First, use `'list_meetings'` to confirm the exact meeting ID and date. Then, ask the agent to retrieve the details for both the meeting (`'get_meeting'`) and the member (`'get_member'`) using those IDs.

Skipping governance status checks

✗ AVOID

A board admin assumes a key vote was taken because it was mentioned in minutes, but fails to check if an official poll or survey was run for formal sign-off.

✓ INSTEAD

Always ask the agent to first use `'list_polls'` and then `'list_surveys'` immediately after reviewing meeting details. This confirms all necessary governance steps were completed.

The Right Fit

Use this MCP if your primary pain point is synthesizing disparate board records, committee documents, member directories, and formal survey results into a single conversational view. If you need to know 'what happened' or 'who was involved,' this is the tool. Don't use it if you simply need to draft meeting minutes; those are content generation tasks best suited for pure text models. Likewise, don't use it if your core need is running complex financial projections—that requires dedicated financial modeling tools outside of board governance scope.

BoardEffect MCP: Streamlining Board Governance Records

Right now, coordinating a single meeting summary means logging into the committee portal for documents, checking the HR system for contact info, and opening the meeting management tool to check agendas. You spend most of your day clicking through tabs and copy-pasting data points just to get an accurate picture.

With this MCP, you ask your agent one question—for instance, 'What were Sarah Miller's roles in Q1?' Your agent instantly pulls member details using `get_member`, finds the relevant meeting records using `get_meeting`, and compiles everything into a single answer. You get context, not clicks.

BoardEffect MCP: Managing Committee Document Workrooms

Before this, to find the latest budget draft for the Finance committee, you had to know the specific folder path, then manually download and verify the document name. If the document was moved or renamed, your workflow stopped cold.

Now, simply ask your agent to list all workrooms using `list_workrooms`, and then specify which documents you need using `list_documents`. The system finds it, regardless of where someone filed it last week.

BoardEffect: 10 Tools for Board Governance Data Retrieval

Use these tools to list members, retrieve specific meetings, find committee documents, and track governance records from your board system.

#	TOOL	DESCRIPTION
01	<code>get_account_info</code>	Checks and retrieves your current user profile details within BoardEffect.
02	<code>get_meeting</code>	Retrieves the specific agenda, attendees, and notes for a single board meeting.
03	<code>get_member</code>	Pulls detailed profiles, roles, and contact information for any listed board member.
04	<code>list_archives</code>	Lists all available historical corporate board records and archived project data.
05	<code>list_documents</code>	Shows you every document stored within a designated committee workroom.
06	<code>list_meetings</code>	Generates a full list of all scheduled and past board meetings for an overview.
07	<code>list_members</code>	Retrieves a comprehensive list of every individual registered as a board member.
08	<code>list_polls</code>	Lists all governance polls created to gather quick feedback or decision points from the board.
09	<code>list_surveys</code>	Retrieves a list of formal board surveys used for tracking organizational sentiment and compliance.
10	<code>list_workrooms</code>	Lists all established committee workrooms (e.g., Finance, Audit) for easy navigation.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Show me the three most recent board meetings and who attended them.

Board Meeting Summary

- **Annual General Meeting:** Oct 15, 2024 (Attendees: All 12 members)
- **Strategy Review Q3:** Aug 20, 2024 (Key Attendees: Chair, CFO, Legal Counsel)
- **Compliance Checkpoint:** Jun 10, 2024 (Attendees: Audit Committee Members Only)

[View full agenda for Oct 15th here.]

U What are the details and contact info for Jane Doe?

Member Profile: Jane Doe

- **Role:** Chair, Audit Committee
- **Status:** Active Member
- **Start Date:** 2018-05-10
- **Contact Email:** jane.doe@example.com

Jane is a key resource for governance matters.

- U** List all board surveys and tell me the general sentiment.

Governance Survey Report (Q2)

TOPIC	RESPONSES	AVERAGE SCORE (1-5)
Board Communication	89%	4.1/5
Strategy Alignment	76%	3.8/5

The overall sentiment is positive, but communication needs more focus on the quarterly goals.

Frequently Asked Questions

01 How can I use the BoardEffect MCP to find old board resolutions?

You can retrieve historical records by asking your agent to list archived board records. The system accesses all past decisions and projects, giving you context without needing manual file searches.

02 Does this MCP help me track committee-specific documents?

Yes. You simply tell the agent which workroom or committee you're interested in, and it lists every document stored there, so you never lose an important report again.

03 What if I need to know who was supposed to attend a meeting?

The MCP allows you to list all scheduled meetings and retrieve detailed information on attendees. You get the full roster and confirmation of attendance for any given session.

04 Is BoardEffect MCP useful for checking member roles?

Absolutely. It pulls comprehensive profiles, showing every board member's role, contact details, and history right from your agent interface in a single query.

05 Can I track governance feedback or polls with BoardEffect MCP?

Yes. You can list all active surveys and polls to see the status of board sentiment tracking. This helps you confirm that formal decision-making processes were followed.
