MCP SERVER | NO CODE | CLOUD HOSTED

Book Club Calendar MCP

Keep your reading group organized through your AI client.

Book Club Calendar MCP gives your AI agent direct access to your club's organizational data. It handles the heavy lifting of tracking reading cycles, managing meeting logistics, calculating book costs, and pulling discussion themes so you can focus on the books instead of the spreadsheets.

A+ Quality Score 100/100

book-club | scheduling | logistics | reading | meetings

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Book Club Calendar MCP

4 tools available
Cloud-hosted on Vinkius

Running a book club involves a lot of moving parts that usually live in scattered notes or spreadsheets. This MCP brings that data directly into your AI client. Instead of digging through emails to find out where the next meeting is or how much everyone owes for the current book, you just ask your agent.

You can use it to pull up a full history of your reading cycles or check specific details like the host and location for an upcoming meetup. If you need to handle the math, the MCP calculates the total costs for your current cycle. It even helps prep for the actual discussion by pulling curated themes and topics. It turns your AI from a simple chatbot into a dedicated club coordinator that knows exactly what your group is reading and when you're meeting next.

Core Capabilities

01 — Cycle Tracking

Your agent uses this to look up previous or upcoming reading periods.

02 — Logistics Retrieval

The AI checks this to find meeting times, locations, and hosts.

03 — Cost Calculation

Your agent runs this to determine the total book expenses for a cycle.

04 — Discussion Prep

The AI accesses this to provide talking points for your group.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/book-club-calendar** — connect your AI agent in three steps.

01 Connect the MCP to your preferred AI client via Vinkius.

02 Ask your agent a question about your book club.

03 The agent calls the necessary tool to fetch the data.

04 Your agent provides the specific details you asked for.

Connecting this MCP to your AI client gives your agent immediate access to your club's data.

Built For

This is for anyone managing a structured reading group who wants to offload administrative tasks to an AI agent.

Club Organizers

They hand off scheduling and cost tracking to the AI.

Reading Group Members

They use the AI to quickly find meeting details or discussion topics.

What Changes When You Connect

01	Centralizes club data within your AI client.
02	Automates the math for book costs.
03	Provides instant access to meeting logistics.
04	Reduces the time spent looking up discussion themes.

Real-World Applications

Meeting Prep

Ask your agent for discussion themes right before a meeting starts.

Budgeting

Check the total cost of books for the current cycle to manage group funds.

Schedule Checking

Quickly find out where and when the next group meetup is happening.

History Review

Look up what books the group has read in previous cycles.

Patterns to Avoid

Manual math errors

AVOID

You try to manually add up every book receipt from a spreadsheet to see if the club is over budget.

✓ INSTEAD

Let the agent handle the math by using `get_financial_summary` to get the exact total for a specific cycle.

Scattered logistics searches

AVOID

You spend ten minutes scrolling through old group chat messages to find out where the next meeting is.

✓ INSTEAD

Just ask your agent for the location and host using `get_meeting_details`.

Vague discussion requests

AVOID

You ask your AI client to suggest general book topics because you forgot what the group actually decided to talk about.

✓ INSTEAD

Use `get_discussion_plan` to pull the specific conversation topics already prepared for your meeting.

The Right Fit

Connect this MCP if you manage a structured reading group with recurring cycles and shared costs. Don't connect it if your group is just a casual, one-off chat with no set schedule or budget. The decision depends on whether you want to offload administrative tracking to your agent.

Book Club Calendar MCP Tools

These tools give your agent direct access to reading schedules, meeting logistics, and group finances.

#	TOOL	DESCRIPTION
01	`get_discussion_plan`	This tool pulls the specific conversation topics prepared for your meeting.
02	`get_financial_summary`	Calculates the total book cost for a specific cycle
03	`get_meeting_details`	This tool provides the location, host, and time for scheduled meetings.
04	`get_reading_cycles`	This tool retrieves a list of all your past and upcoming reading cycles.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What are the details for the next book club meeting?

The next meeting for 'The Great Gatsby' is scheduled for June 15th at 7:00 PM at the Downtown Library, hosted by Sarah.

U How much is the total cost for the current reading cycle?

The total cost for the current cycle is $120.00, based on a book price of $15.00 per member.

U What should we talk about during our next meeting?

The primary theme is 'Social Class in the 1920s'. Discussion topics include the symbolism of the green light and the impact of wealth on character motivations.

Frequently Asked Questions

01 **What can this MCP do for my book club?**

It lets your AI client manage reading cycles, meeting logistics, book costs, and discussion topics.

02 **How do I find out where the next meeting is?**

You can ask your AI client for meeting details, and it will use the tool to find the location and host.

03 **Can the AI help with book club expenses?**

Yes, the MCP includes a tool to calculate the total book cost for a specific reading cycle.

04 **Will this work with my existing AI tools?**

Yes, this MCP works with any MCP-compatible client like Claude, Cursor, or Windsurf.

05 **Do I need to set up my own database?**

No, Vinkius hosts the MCP, so you just connect and start using the tools.

06 **How can I see upcoming book reading periods?**

You can use the `get_reading_cycles` tool and filter by the 'Planned' or 'In-Progress' status to see upcoming periods.

07 **Where can I find the meeting location and host information?**

Use the `get_meeting_details` tool with the specific cycle ID to retrieve the date, time, location, and host name.

08 **Can I find out how much the books will cost the group?**

Yes, the `get_financial_summary` tool provides the individual book cost and the total cost for all active members.

Go Live in 60 Seconds

Get your connection token from **cloud.vinkius.com**, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
