Book Completion Rate Tracker MCP.

Keep your reading progress and book statistics organized.

Book Completion Rate Tracker MCP lets your AI client manage your reading data. You can update how many pages you have finished, check your progress on specific titles, and pull aggregate reading statistics. It turns your agent into a personal librarian that tracks exactly how much of your library you have actually finished.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Book Completion Rate Tracker MCP

4 tools available

Cloud-hosted on Vinkius

You can stop manually logging your reading progress in spreadsheets or notes. This MCP gives your AI client the ability to act as a dedicated reading assistant. You can tell your agent exactly which page you just reached, and it will handle the math to update your completion percentage. If you want to see how your reading habits look over time, your agent can pull together your total stats across every book you have tracked. It also helps you find books based on how much the community has read, making it easy to identify trending titles or books you might want to pick up next. Whether you are tracking a single novel or managing a massive digital library, this tool keeps your data current and accessible through any MCP-compatible client.

Core Capabilities

01 — Progress Tracking

Your agent calculates completion percentages based on current page counts.

02 — Data Updates

You can tell your agent to update your reading status instantly.

03 — Statistical Analysis

Your agent aggregates data to show your overall reading performance.

04 — Library Filtering

Your agent finds books based on global completion tiers.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/book-completion-rate-tracker — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Grant the client access to the Book Completion Rate Tracker MCP.
- 03 Ask your agent to update your progress or check your stats.
- 04 The agent executes the specific tool to retrieve or change your data.

The setup is handled by Vinkius, so you can start using the tools immediately.

Built For

This is for anyone who wants to move their reading logs into an AI-driven workflow. It works best for people who want to talk to their data rather than typing into a manual tracker.

Avid Readers

People who want to track multiple books without manual math.

Librarians

Users who need to monitor global completion trends for specific titles.

Data Enthusiasts

People who want to analyze their personal reading habits through an AI agent.

What Changes When You Connect

- 01 Automates the calculation of completion percentages.
- 02 Centralizes reading data for easy retrieval by your AI client.
- 03 Provides global book data through completion tiers.

04 Eliminates the need for manual progress logging.

Real-World Applications

Daily Reading Logs

Tell your agent you finished page 120 and let it update your progress automatically.

Reading Habit Analysis

Ask your agent for a summary of your reading stats to see how many books you finish each month.

Book Discovery

Ask for books that have a high global completion rate to find popular reads.

Progress Audits

Check exactly how far you are into a specific book before you start a reading session.

Patterns to Avoid

Manual math errors

❌ AVOID

You try to calculate your own percentage by dividing pages read by total pages in a chat window.

✓ INSTEAD

Let your agent do the math for you. Use ``update_reading_progress`` to log your current page and let the MCP handle the percentages.

Fragmented reading logs

❌ AVOID

You keep your reading history in a messy notepad or a spreadsheet that your agent can't see.

✓ INSTEAD

Centralize everything in this MCP. Use ``get_user_reading_stats`` to get a clean, unified view of your entire reading history.

Blind book discovery

❌ AVOID

You ask your agent for book recommendations based only on genre without knowing what's actually popular.

✓ INSTEAD

Use ``list_books_by_completion_tier`` to find books that have high global completion rates among other readers.

The Right Fit

Connect this MCP if you want to talk to your reading data instead of typing into spreadsheets. If you prefer manual logging and don't care about statistical trends, you don't need this. The deciding factor is whether you want your agent to act as a proactive reading assistant.

Book Completion Rate Tracker Tools

These tools let your agent manage your reading progress, pull your personal reading stats, and find trending books.

#	TOOL	DESCRIPTION
01	get_book_progress	This tool calculates the exact completion percentage for a specific book and user.
02	get_user_reading_stats	Use this to get a full breakdown of reading completion data across all books for a user.
03	list_books_by_completion_tier	This tool retrieves a list of books filtered by their global completion status.
04	update_reading_progress	This tool lets you update the current page count for a book you are reading.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U How much of the book 'book_123' has user 'user_456' finished?

User 'user_456' has completed 45% of 'book_123', having read 90 out of 200 pages.

U Update my progress for 'book_789' to page 50.

Progress updated successfully. Your new completion rate for 'book_789' is 25%.

U Show me books that have a global completion rate between 50% and 80%.

The following books have an average completion rate between 50% and 80%: 'book_abc' (62%), 'book_def' (75%).

Frequently Asked Questions

01 How do I update my reading progress?

You simply tell your AI client which book you are reading and what page you are on. The agent uses the update tool to save that information.

02 Can I see my total reading statistics?

Yes. You can ask your agent to show you your reading stats, and it will aggregate the data from all your books.

03 What clients can I use with this MCP?

You can use this with any MCP-compatible client like Claude, Cursor, Windsurf, or VS Code.

04 Does this track global book data?

Yes, you can use the tool to list books based on their global completion tiers.

05 Do I need to host this myself?

No. Vinkius hosts and manages the MCP for you, so it is ready to use as soon as you connect.

06 How do I update my current page?

You can use the `update\_reading\_progress` tool to set the current page number for a specific user and book.

07 How is the completion rate calculated?

The completion rate is the ratio of pages read to the total number of pages in the book, expressed as a percentage.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
