Camping Night Total is a cost calculator.

Plan your outdoor trips without guessing the total price.

Camping Night Total handles the math for your next trip. It lets your AI client check nightly rates for different campsite tiers, calculate exact stay costs, and verify if your planned booking follows specific regional camping rules in the USA or EU.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Camping Night Total MCP

4 tools available

Cloud-hosted on Vinkius

Planning a camping trip involves more than just packing gear. You have to account for different site tiers, regional pricing, and specific booking rules that might limit how long you can stay. This MCP takes that math off your plate. Instead of manually checking rate tables or calculating totals for multiple nights, you can just ask your agent to do it. It works across different regions like the USA and EU, so you can get accurate pricing regardless of where you're heading. You can check which tiers are available in a specific area, see what those tiers cost per night, and confirm if your intended stay is actually allowed under current camping regulations. It's a straightforward way to get clear answers on trip expenses and booking feasibility through your preferred AI interface.

Core Capabilities

01 — Regional Pricing

Your agent pulls specific rates for sites located in the USA or EU.

02 — Tier Comparison

The AI checks different campsite levels to find the right price point.

03 — Rule Validation

Your agent verifies if a stay length or tier selection is allowed.

04 — Total Costing

The AI calculates the final price for any combination of nights and tiers.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/camping-night-total — connect your AI agent in three steps.

- 01 Connect the MCP to your client like Claude or Cursor via Vinkius.
- 02 Ask your agent a question about camping costs or rules.
- 03 The agent calls the necessary tool to fetch rates or validate a stay.
- 04 You receive a direct answer with the calculated cost or eligibility status.

Connecting this MCP to your AI client gives it immediate access to camping rate and rule data.

Built For

This is for anyone planning outdoor trips who wants to avoid pricing surprises. It's built for people who want to use an AI agent to handle the logistics of trip budgeting.

Travel Planner

Hands off the math and rule checking to an AI agent.

Outdoor Enthusiast

Uses the AI to quickly estimate trip budgets for different regions.

Trip Coordinator

Checks booking eligibility for groups to ensure stays meet site rules.

What Changes When You Connect

- 01 Eliminates manual math for multi-night stays.
- 02 Provides real-time tier availability by region.
- 03 Prevents booking errors by checking stay limits automatically.

Real-World Applications

Budget Estimation

Ask your agent for the total cost of a 5-night trip in a specific tier.

Regional Planning

Compare the available camping tiers between the USA and the EU.

Rule Compliance

Check if a long-term stay exceeds the maximum allowed nights for a tier.

Tier Selection

Find out which tiers are available before you start booking.

Patterns to Avoid

Guessing total costs

❌ AVOID

You try to estimate a trip budget by multiplying a rough nightly rate by your total nights.

✓ INSTEAD

Use ``calculate_stay_cost`` to get the exact total based on specific tier rates.

Ignoring regional rules

❌ AVOID

You assume a 10-night stay is fine everywhere without checking local site restrictions.

✓ INSTEAD

Run ``validate_booking_eligibility`` to ensure your planned duration doesn't break site rules.

Assuming tier availability

❌ AVOID

You plan a high-end trip assuming premium tiers exist in every single region you visit.

✓ INSTEAD

Check `list\_available\_tiers` first to see what's actually offered in your destination.

The Right Fit

Connect this MCP if you frequently plan multi-night outdoor trips across different countries and want to avoid pricing errors. If you only ever camp at the same local site with fixed rates, you don't need this.

Camping Night Total: 4 Specialized Tools

These tools handle the math and rule checking for campsite pricing and stay limits across different regions.

#	TOOL	DESCRIPTION
01	get_tier_rates	This tool pulls the current nightly fees for every available camping tier.
02	list_available_tiers	Use this to get a list of all tier names offered in a specific region.
03	validate_booking_eligibility	This tool checks if your planned stay follows the specific rules for camping sites.
04	calculate_stay_cost	This tool calculates the total amount you'll pay for a specific number of nights.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U How much does it cost to stay 3 nights in a Tier A site in the USA?

The total cost for a 3-night stay in a Tier A site in the USA is \$45.00.

U What are the available camping tiers in the EU?

The available tiers in the EU are Tier A (Standard), Tier B (Premium), and Tier C (Luxury).

U Is it possible to book a Tier B site for 10 nights in the USA?

No, Tier B sites have a maximum stay limit of 7 consecutive nights.

Frequently Asked Questions

01 Which regions are supported?

The MCP supports pricing and rules for the USA and the EU.

02 Can I check if a stay is allowed?

Yes, the tool can validate if your stay configuration meets specific camping rules.

03 How does it handle different campsite levels?

It uses tier rates to calculate costs based on the specific tier you choose.

04 What clients can I use this with?

You can use this with any MCP-compatible client like Claude, Cursor, or Windsurf.

05 Does it calculate the total price for me?

Yes, it calculates the total amount for a specific stay based on the tier and number of nights.

06 How do I find out the price for a specific campsite tier?

You can use the ``get_tier_rates`` tool to see the nightly fees for all available tiers in your chosen region.

07 Can I calculate the total cost for my entire trip?

Yes, use the ``calculate_stay_cost`` tool by providing the tier name, the number of nights, and the region.

08 How do I know if my booking is allowed?

Use the ``validate_booking_eligibility`` tool to check if your requested stay complies with regional camping rules.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
