Care Decision Meeting Plan MCP

Standardize clinical meetings and track patient care outcomes.

Care Decision Meeting Plan MCP helps healthcare teams manage complex clinical decision-making. It handles the heavy lifting of organizing multidisciplinary meetings, from building chronological agendas to logging formal decisions and assigning follow-up tasks. Your AI client uses this to ensure patient safety and team alignment through structured governance rules.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Care Decision Meeting Plan MCP

4 tools available

Cloud-hosted on Vinkius

You can use this MCP to bring structure to high-stakes clinical discussions. Instead of scrambling to organize notes or missing critical follow-up tasks, you let your AI client manage the workflow. It helps you prepare for meetings by identifying necessary patient data and documents before anyone sits down. Once the meeting starts, it keeps the conversation on track with a clear timeline.

After a decision is reached, the MCP formalizes the outcome in a permanent log. It applies specific governance rules like Consensus or Majority to ensure the decision is valid and documented correctly. You won't lose track of what happens next because it automatically generates a list of tasks and review dates. This keeps the entire multidisciplinary team aligned on patient care plans and ensures no action item falls through the cracks.

Core Capabilities

01 — Meeting Preparation

Your agent identifies required clinical documents and builds chronological timelines.

02 — Decision Formalization

The MCP logs outcomes using specific governance rules like Consensus or Majority.

03 — Task Management

It generates follow-up actions and review dates to ensure care plan execution.

04 — Clinical Governance

The tool applies structured rules to ensure multidisciplinary alignment.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/care-decision-meeting-plan — connect your AI agent in three steps.

- 01
- Connect your preferred client like Claude or Cursor to the Vinkius platform.
- 02
- Ask your agent to prepare for a clinical meeting by requesting an agenda or pre-read list.
- 03
- Use the MCP to record formal decisions and the rules used to reach them during the meeting.
- 04
- Generate a list of follow-up actions and review dates to close the loop on care.

Connect your AI client to Vinkius to start managing clinical workflows immediately.

Built For

This MCP is built for healthcare professionals managing multidisciplinary patient care teams.

Clinicians

They use the MCP to structure complex decision-making meetings and log outcomes.

Nurse Managers

They use it to track follow-up actions and ensure team alignment on care plans.

Care Coordinators

They use it to prepare pre-read lists and manage meeting timelines.

What Changes When You Connect

- 01
- Reduces meeting drift by enforcing chronological agendas.
- 02
- Ensures patient safety through formal decision logging and governance rules.
- 03
- Prevents missed tasks by automatically generating follow-up action lists.

- 04 Standardizes how multidisciplinary teams reach and record consensus.
-

Real-World Applications

Discharge Planning

Organize meetings to finalize patient discharge details and assign necessary follow-up tasks.

Palliative Care Transitions

Identify required patient history and lab results before deciding on a transition in care.

Multidisciplinary Rounds

Use structured agendas to keep diverse medical specialists aligned on a single patient plan.

Decision Auditing

Maintain a permanent log of decisions made using specific rules like Consent or Majority.

Patterns to Avoid

Manual meeting organization

❌ AVOID

You spend twenty minutes before a multidisciplinary round hunting for lab results and patient history files.

✓ INSTEAD

Use `compile_pre_read_list` to identify exactly which documents and data points the team needs to review before you start.

Unstructured decision logging

❌ AVOID

The team agrees on a discharge plan, but the specific reasoning and consensus type are lost in handwritten notes.

✓ INSTEAD

Use `record_decision` to capture and formalize outcomes into a permanent, structured log.

Forgotten follow-up tasks

❌ AVOID

A clinician agrees to a follow-up lab, but it never gets scheduled or tracked in the patient's care plan.

✓ INSTEAD

Use `assign_follow_up_actions` to create a list of tasks and specific review dates based on your meeting decisions.

The Right Fit

Multidisciplinary care teams should connect this MCP to standardize how they reach and record consensus. Individual clinicians working in isolation do not need this. The decision depends on whether your team currently struggles with meeting drift or lost action items.

Care Decision Meeting Plan Tools for Clinical Workflows

These tools handle the heavy lifting of meeting preparation, decision logging, and task assignment for medical teams.

#	TOOL	DESCRIPTION
01	compile_pre_read_list	This tool identifies the specific documents and data points that the team needs to review before a meeting begins.
02	generate_meeting_agenda	This tool builds a structured, chronological timeline to guide the meeting flow.
03	record_decision	This tool captures and formalizes meeting outcomes into a permanent, structured log.
04	assign_follow_up_actions	This tool creates a list of tasks and specific review dates based on the decisions made during a meeting.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Generate a 30-minute agenda for a meeting with Dr. Smith and Nurse Jones to discuss discharge plans, prioritizing the discharge plan.

Meeting Agenda:

- Discharge Plan Discussion: 25 minutes
 - Other items: 5 minutes
- Total Duration: 30 minutes

- U** What documents should we review for a decision on palliative care transition?

Required Documents: Patient History, Recent Lab Results, Imaging Reports.

- U** Record the decision to transition to palliative care using Consensus with Dr. Smith and Nurse Jones.

Decision Recorded: Transition to palliative care. Outcome: Approved. Rationale: Patient comfort and goals of care alignment. Rule: Consensus. Participants: Dr. Smith, Nurse Jones.

Frequently Asked Questions

01 Which AI clients can use this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

02 How does the MCP handle decision-making rules?

The MCP applies specific governance rules such as Consensus, Consent, or Majority to ensure decisions are recorded according to clinical requirements.

03 Does this MCP host my data?

Vinkius hosts and manages the MCP, allowing you to connect your client once and access the tools immediately without managing your own hosting.

04 Can I use this to track tasks after a meeting?

Yes, the `assign_follow_up_actions` tool creates a list of tasks and review dates based on the decisions you record.

05 Is this for individual doctors or entire teams?

It is designed for multidisciplinary teams to ensure alignment and safety during complex clinical decision-making.

06 How does this tool help with clinical governance?

The `'record_decision'` tool allows users to specify the governance rule used, such as Consensus or Consent, ensuring every clinical decision is documented with its specific rationale and rule.

07 Can I prepare participants before the meeting starts?

Yes, you can use `'compile_pre_read_list'` to identify which supporting documents are essential for the decisions being discussed, helping participants prepare in advance.

08 How are follow-up tasks managed?

After decisions are finalized, `'assign_follow_up_actions'` generates a list of tasks and maps them to specific review dates to ensure implementation.
