Care Family Contact Directory MCP

Keep critical family and provider information accurate and secure.

Care Family Contact Directory MCP manages sensitive contact details for families and healthcare providers. It uses role-based access to protect privacy and includes built-in auditing to catch outdated information. You can use it within your AI client to pull emergency lists, check for stale data, or run quarterly contact audits.

management

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Care Family Contact Directory MCP

4 tools available

Cloud-hosted on Vinkius

Managing contact info for elderly parents or family members in care is a mess of spreadsheets and outdated notes. This MCP fixes that by giving your AI client a structured, secure way to handle provider and family data. It doesn't just store numbers; it manages access. You can set different permission tiers so that sensitive details stay private while still giving caregivers the info they need.

When a crisis hits, you don't want to hunt through a PDF. You can ask your agent to pull a condensed list of essential contacts immediately. To keep things running smoothly, the MCP identifies which records haven't been checked lately and generates checklists for your regular audits. It's a way to ensure that when you actually need a doctor or a relative, the number you're calling is actually correct.

Core Capabilities

01 — Role-Based Access

Your agent filters contact visibility based on the user's specific permission tier.

02 — Crisis Response

The AI pulls highly condensed emergency lists when you need them instantly.

03 — Data Integrity

The MCP flags outdated information through stale record reporting.

04 — Audit Management

Your agent generates structured checklists to guide quarterly data verification.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/care-family-contact-directory — connect your AI agent in three steps.

- 01 Connect your AI client to Vinkius.
- 02 The MCP is hosted and ready to run immediately.
- 03 Ask your agent to pull a directory view or an emergency list.
- 04 Use the audit tools to keep your data clean and current.

Setting up this MCP takes one click through Vinkius.

Built For

This MCP is built for people managing care for others who need reliable, organized contact data.

Family Caregivers

They use the agent to quickly access provider numbers and manage family contact updates.

Healthcare Coordinators

They rely on the tool to run audits and ensure contact lists remain accurate for patients.

Private Care Managers

They use the role-based access to manage sensitive information across different staff levels.

What Changes When You Connect

- 01 Role-based permissions prevent unauthorized access to sensitive contact details.
- 02 Stale record reports highlight exactly which numbers need updating.

- 03

Emergency contact filtering speeds up response times during a crisis.
- 04

Automated checklists turn manual audits into a structured process.

Real-World Applications

Emergency Situations

Ask your agent for the priority emergency contacts to get immediate phone numbers during a medical crisis.

Privacy Management

Set specific permission tiers to ensure different family members see only the data they are allowed to see.

Quarterly Maintenance

Use the verification checklist to systematically check that all provider info is still correct.

Data Cleaning

Run a stale records report to find and fix phone numbers that haven't been used in months.

Patterns to Avoid

Manual data auditing

❌ AVOID

You spend your Sunday afternoon scrolling through a massive spreadsheet to find which phone numbers might be out of date.

✓ INSTEAD

Let your agent do the heavy lifting by using ``get_stale_records_report`` to find exactly which entries need your attention.

Over-sharing sensitive info

❌ AVOID

You send a full list of medical provider contacts to a temporary caregiver who only needs a single phone number.

✓ INSTEAD

Use ``get_directory_view`` to provide a filtered view that respects specific permission tiers and keeps sensitive data private.

Panic searching during crises

❌ AVOID

A medical emergency happens and you're frantically searching through old emails or printed PDFs to find a doctor's number.

✓ INSTEAD

Ask your agent for the priority contacts immediately using ``get_emergency_contacts`` to get the info you need in seconds.

The Right Fit

Connect this MCP if you manage care for elderly parents or family members and need a single source of truth for contact data. Do not connect it if you are looking for a general-purpose address book. The decision depends on whether you need to enforce strict privacy tiers and automated data audits for caregivers.

Care Family Contact Directory MCP Tools

These tools give your agent the ability to manage permissions, pull emergency data, and run maintenance audits on your contact lists.

#	TOOL	DESCRIPTION
01	get_directory_view	This tool provides a filtered view of the contact directory based on the specific role and permission level you provide.
02	get_emergency_contacts	This tool pulls a condensed list of essential contacts for immediate crisis response, with an optional filter for priority levels.
03	get_stale_records_report	This tool identifies any contacts in your directory that haven't been verified within the required timeframe.
04	get_verification_checklist	This tool generates a structured task list for your quarterly audits to ensure all contact info stays current.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Show me the contact directory for a user with Tier 2 access.

Here is the contact directory view for Tier 2 access: John Doe (Primary Physician), Jane Smith (Pharmacy).

U Which contacts have not been verified in the last 90 days?

The following contacts are considered stale: John Doe (last verified 120 days ago), Jane Smith (last verified 105 days ago).

U Give me the emergency contact list.

The primary emergency contacts are: Alice Johnson (Phone: 555-0123, Priority 1) and Bob Wilson (Phone: 555-0456, Priority 2).

Frequently Asked Questions

01 How does this MCP handle privacy?

It uses role-based visibility, meaning your agent only shows contact information that matches the user's assigned permission tier.

02 Can I use this with Claude or Cursor?

Yes, you can connect this MCP to any MCP-compatible client like Claude, Cursor, or Windsurf.

03 How do I know if a contact's number is wrong?

You can use the stale records report to identify any contacts that haven't been verified within your required maintenance window.

04 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use as soon as you connect.

05 What is the purpose of the verification checklist?

It provides a structured list of tasks to help you perform quarterly audits and ensure all contact information remains accurate.

06 How is privacy handled in the directory?

Privacy is enforced through role-based visibility. Depending on your assigned permission tier, you will only see the contact details permitted for your level of access.

07 How can I find contacts that need updating?

You can use the ``get_stale_records_report`` tool to identify any contacts whose information has not been verified within your specified timeframe.

08 Can I access emergency contacts during a crisis?

Yes, the ``get_emergency_contacts`` tool provides a condensed list of essential contacts following the established emergency order, bypassing standard permission tiers for immediate access.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
