Care Provider Interview Planner MCP

Hire the right caregiver using data-driven selection tools.

Care Provider Interview Planner MCP helps families and hiring managers move past gut feelings to make objective hiring decisions. It provides your AI client with the tools to build interview questions, rank candidates against specific family needs, verify references, and summarize final decisions through a structured rubric system.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Care Provider Interview Planner MCP

4 tools available

Cloud-hosted on Vinkius

Hiring a caregiver is a high-stakes decision that shouldn't rely on a single conversation. This MCP gives your AI agent the framework to act as a professional hiring consultant. Instead of generic questions, you can generate interview prompts tailored to specific household needs like meal prep or mobility assistance. You can also feed candidate profiles into the system to rank them against a weighted rubric, ensuring that mandatory requirements are met before you even consider a score. Once you've interviewed a few people, the MCP helps you build verification checklists for reference checks and produces a final onboarding brief to transition the new hire into your home or facility. It turns a chaotic interview process into a repeatable, organized workflow.

Core Capabilities

01 — Custom Question Generation

Your agent creates interview questions that target specific job duties.

02 — Weighted Candidate Ranking

The AI compares multiple profiles against your specific scoring criteria.

03 — Reference Verification

The system builds checklists to ensure you confirm candidate claims with past employers.

04 — Decision Summarization

Your agent produces a final onboarding brief once a provider is selected.

05 — Mandatory Requirement Filtering

The tool flags candidates who fail to meet non-negotiable criteria regardless of their total score.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/care-provider-interview-planner — connect your AI agent in three steps.

- 01 Connect your AI client to the MCP via the Vinkius dashboard.
- 02 Provide your candidate data or job requirements to your AI agent.
- 03 Use the tools to generate questions, rank candidates, or build checklists.
- 04 Review the final decision summary or onboarding brief produced by the agent.

Connect your preferred AI client to Vinkius to start using these tools immediately.

Built For

This MCP is built for anyone responsible for vetting personal or professional care providers.

Families

Parents or adult children hiring in-home help who need an objective way to vet candidates.

Care Managers

Professionals who need to standardize the selection process across multiple clients.

Hiring Coordinators

Staff members who hand off candidate data to the AI to generate interview workflows.

What Changes When You Connect

- 01 Reduces hiring bias by using weighted rubrics instead of intuition.
- 02 Ensures non-negotiable requirements are checked before evaluating scores.

- 03

Standardizes the interview process through consistent question sets.
- 04

Speeds up the transition from interview to hire with automated briefs.

Real-World Applications

In-Home Care Selection

A family uses the rubric to compare three different nannies or elder care providers.

Reference Verification

A manager uses the checklist tool to ensure they don't forget to verify specific skills with a former boss.

Standardizing Interviews

A care agency uses the tool to ensure every interviewer asks the same core questions.

Onboarding Preparation

A user generates a final summary to hand to a new hire to outline their role.

Patterns to Avoid

Relying on gut feeling

❌ AVOID

You interview three people and pick the one you liked most personally without comparing their actual skills.

✓ INSTEAD

Input all candidate profiles into the system and use ``compare_candidates`` to rank them against your weighted rubric.

Vague interview questions

❌ AVOID

You ask every candidate the same generic questions like 'Tell me about yourself' regardless of their role.

✓ INSTEAD

Use ``generate_interview_questions`` to build a list tailored to specific duties like mobility assistance or meal prep.

Skipping the reference check

❌ AVOID

You hire a provider immediately after the interview because their resume looks perfect.

✓ INSTEAD

Run ``generate_reference_check_tasks`` first to get a checklist of specific claims you need to verify with former employers.

The Right Fit

Families and care managers should connect this MCP if they need an objective way to vet providers. People looking for a casual, non-structured hiring process should avoid it. The decision depends on whether you want a repeatable, rubric-based workflow instead of relying on intuition.

Care Provider Interview Planner Tools

These tools handle everything from drafting specific interview questions to ranking candidates and preparing onboarding documents.

#	TOOL	DESCRIPTION
01	generate_interview_questions	This tool builds a custom list of interview questions based on the specific needs of the role.
02	compare_candidates	Use this to rank multiple people against your weighted rubric and mandatory requirements.
03	create_onboarding_brief	This tool generates a final summary of the selected provider to help with the transition.
04	generate_reference_check_tasks	This tool produces a checklist of specific items you need to verify with a candidate's references.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Compare these two candidates: Alice (Score: 85, Mandatory: Pass) and Bob (Score: 90, Mandatory: Fail).

Alice is the qualified candidate. Although Bob has a higher score, he failed the mandatory criteria and is therefore disqualified.

- U** Generate interview questions for a candidate for meal prep and light cleaning.

1. Can you describe your experience with meal preparation for specific dietary needs? 2. How do you manage your schedule to ensure light cleaning tasks are completed daily?

- U** Create a reference check task for a candidate who claims to have 5 years of experience.

Verify the candidate's employment history with previous employers to confirm they have completed at least 5 years of professional caregiving experience.

Frequently Asked Questions

01 How do I use this MCP with Claude?

You connect your Claude desktop app to Vinkius once, and then you can call these tools directly within your existing chats.

02 Can I use my own scoring system?

Yes, the compare_candidates tool is designed to work with your specific weighted rubrics and mandatory criteria.

03 Does this MCP store my candidate data?

Vinkius hosts the MCP, but the data you pass to your AI client during a session is managed according to your client's privacy settings.

04 What happens if a candidate fails a mandatory requirement?

The `compare_candidates` tool will flag that candidate as disqualified even if they have a high overall score.

05 Do I need to install anything on my computer?

No, Vinkius hosts the MCP, so you only need to connect your compatible AI client to the hosted service.

06 How does the candidate ranking work?

The system uses a weighted rubric where you assign importance to different factors. It also enforces mandatory criteria; if a candidate fails a mandatory requirement, they are automatically disqualified.

07 Can I generate specific questions for a candidate?

Yes, you can use the `'generate_interview_questions'` tool to create a customized list of questions based on the required tasks and the candidate's profile.

08 What is included in the onboarding brief?

The `'create_onboarding_brief'` tool produces a structured summary that includes the selection justification, a fit summary, and identified risks to help you move forward with the provider.
