MCP SERVER | NO CODE | CLOUD HOSTED

Care Relocation Logistics Plan MCP

Turn move details into a structured, actionable plan.

Care Relocation Logistics Plan MCP handles the heavy lifting of move coordination. It takes your move parameters and builds a logical sequence of events, manages helper workloads, and keeps your budget and utility transfers on track. You can use it with any MCP-compatible client to turn a chaotic relocation into a organized schedule.

A+ Quality Score 100/100

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Care Relocation Logistics Plan MCP

5 tools available
Cloud-hosted on Vinkius

Moving is a logistical nightmare of overlapping deadlines and shifting resources. This MCP acts as your coordination engine to keep everything organized. Instead of staring at a messy list of tasks, you give your AI client the move details, and it builds a structured plan that respects how much time and money you actually have.

You can use it to map out exactly when things need to happen with get_move_timeline. If you have friends or family helping, get_packing_assignments splits the work so nobody is overwhelmed. It also helps you stay on top of the small but critical details, like when to switch your utilities via get_service_notifications or what to prioritize the moment you walk into your new place using get_first_day_checklist. To make sure you don't run out of cash halfway through, calculate_budget_utilization checks your planned costs against your limit. It's about turning a massive project into a series of manageable, predictable steps.

Core Capabilities

01 — Timeline Generation

Your agent uses this to build a step by step schedule for the entire relocation.

02 — Workload Distribution

Your AI client uses this to assign specific packing tasks to different people.

03 — Budget Monitoring

Your agent uses this to verify that moving expenses do not exceed your available funds.

04 — Service Coordination

Your AI client uses this to manage the timing of utility transfers.

05 — Arrival Prioritization

Your agent uses this to identify the most important tasks for your first day in the new home.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/care-relocation-logistics-plan** — connect your AI agent in three steps.

01 Connect your preferred AI client to the Vinkius hosted MCP.

02 Provide your move details, such as dates, items, and helpers, to your agent.

03 The agent uses the MCP tools to generate timelines, budgets, or assignments.

04 Review the structured plan and use it to execute your move.

The MCP connects your move details directly to your AI client for instant planning.

Built For

This MCP is built for anyone managing a relocation where timing and resource management are critical.

Relocation Coordinators

They hand off the creation of complex move schedules and task assignments to the AI.

Homeowners

They use the tool to manage their own moving budgets and first-day checklists.

Logistics Assistants

They use the MCP to organize helper workloads and service notifications.

What Changes When You Connect

01 Converts move parameters into a structured chronological schedule.

02 Prevents budget overruns by validating costs against limits.

03	Balances workloads by assigning specific tasks to available helpers.
04	Reduces arrival chaos with a prioritized first-day task list.

Real-World Applications

Personal Relocation

A person moving to a new city uses the tool to organize their budget and packing helpers.

Small Business Moves

A small team uses the timeline and packing tools to coordinate an office relocation.

Budget Management

A user checks if their moving quotes fit within their total available cash.

Utility Transition

A mover schedules service notifications to ensure electricity and water are ready at the new house.

Patterns to Avoid

Ignoring the budget limit

AVOID

You list every single moving expense without checking if you actually have the cash to cover them.

✓ INSTEAD

Run your estimates through calculate_budget_utilization to see if you're overspending before you commit to a moving company.

Overwhelming your helpers

AVOID

You tell three friends they are all responsible for packing the entire kitchen at once.

✓ INSTEAD

Use get_packing_assignments to give each person a specific, manageable workload so nobody burns out.

Missing utility deadlines

AVOID

You assume the electricity will just be on when you arrive at the new house.

✓ INSTEAD

Check get_service_notifications to identify exactly which utility transfers you need to schedule to avoid a dark house.

The Right Fit

Connect this MCP if you are managing a move that involves multiple people or a strict budget. If you are moving a single suitcase across town by yourself, you don't need this. The deciding factor is whether you have moving resources and deadlines that require structured coordination.

Care Relocation Logistics Plan Tools

These tools handle the heavy lifting of scheduling, budgeting, and task distribution for your move.

#	TOOL	DESCRIPTION
01	`get_move_timeline`	This tool creates a chronological schedule of every activity required for your move. It organizes tasks based on when they must happen.
02	`calculate_budget_utilization`	This tool checks if your planned moving costs stay within your set budget. It compares your estimated expenses against your financial limit.
03	`get_first_day_checklist`	This tool generates a prioritized list of things you need to do immediately upon arriving at your new home. It focuses on essential tasks to get you settled.
04	`get_packing_assignments`	This tool distributes packing duties among the people helping you move. It assigns specific workloads to your available helpers.
05	`get_service_notifications`	This tool identifies which utility or service transfers you need to schedule. It helps ensure you have continuous service at your new location.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Plan a move from New York to Boston on 2025-05-15 with a sofa, 10 boxes, and a dining table. I have two helpers: Alice and Bob.

Your move timeline is set for May 15th, 2025. Alice will pack the sofa and 5 boxes, while Bob will pack the dining table and 5 boxes. Service notifications for utilities in New York and Boston are scheduled accordingly.

U What should I do first when I arrive at my new home in Seattle?

Your first-day checklist includes securing the keys, verifying water and power connectivity, and setting up your essential bedding and basic tools.

U Check if my $2000 budget is enough for costs of $1500, $300, and $400.

Your total estimated cost is $2200, which exceeds your $2000 budget by $200.

Frequently Asked Questions

01 **How do I use this MCP with Claude?**

You connect your Claude client to Vinkius once. After that, you can simply ask Claude to plan your move or check your budget using the tools provided by this MCP.

02 **Can this MCP help me stay under budget?**

Yes. You can use the calculate_budget_utilization tool to check if your estimated moving costs fit within your financial constraints.

03 **Does it help with packing?**

Yes. The get_packing_assignments tool allows you to distribute packing tasks among the people helping you move.

04 **What happens on my first day at the new house?**

You can use the get_first_day_checklist tool to get a prioritized list of essential tasks to complete as soon as you arrive.

05 **Do I need to host this myself?**

No. Vinkius hosts and manages the MCP for you. You just connect your client and start using the tools.

06 **How does the timeline handle dependencies?**

The `get_move_timeline` tool respects sequence dependencies, ensuring that tasks like packing are scheduled before loading activities.

07 **Can I manage my moving budget?**

Yes, you can use `calculate_budget_utilization` to compare your estimated costs against your total allocated budget.

08 **How are packing tasks assigned?**

The `get_packing_assignments` tool distributes items among available helpers to ensure a balanced workload.
