Care Service Renewal Calendar MCP

Stop missing contract notice windows and accidental renewals.

Care Service Renewal Calendar MCP tracks your service contracts and manages the entire renewal lifecycle. It turns expiration dates and notice windows into clear timelines, meeting agendas, and decision checklists. Your AI client uses this to keep you ahead of critical deadlines and ensures you have the documentation ready for every provider review.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Care Service Renewal Calendar MCP

4 tools available

Cloud-hosted on Vinkius

You shouldn't have to worry about a service contract auto-renewing because you missed a notice window. This MCP handles the heavy lifting of contract orchestration by turning raw renewal parameters into a structured schedule. You can use it to map out exactly when you need to make a decision for every provider in your stack. Instead of digging through emails, you can ask your agent to pull a chronological timeline of upcoming expirations or generate a high-priority list of decisions that need your attention right now. It also helps you prepare for the actual review meetings. You can generate a specific agenda for a provider evaluation or build a plan for where to store your audit documentation. It keeps your procurement and compliance workflows organized without the manual tracking.

Core Capabilities

01 — Timeline Generation

Your agent creates a chronological view of all upcoming contract expirations and notice deadlines.

02 — Decision Prioritization

The MCP identifies which contracts are currently in their notice window to prevent accidental renewals.

03 — Meeting Preparation

Your AI client builds structured agendas to help stakeholders evaluate provider performance.

04 — Audit Readiness

The tool generates plans for organizing documentation to support contract decisions and audits.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/care-service-renewal-calendar — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Provide your contract details including expiration dates and notice windows.
- 03 Ask your agent to generate timelines, agendas, or decision lists.
- 04 Use the output to execute renewals, cancellations, or audits.

You connect the MCP to your AI client and start managing contracts through natural language.

Built For

This MCP is built for professionals managing vendor relationships and procurement cycles who need to stay ahead of contract deadlines.

Procurement Manager

Uses the MCP to track notice windows and manage vendor renewal timelines.

Operations Lead

Hands off the task of organizing renewal agendas and decision checklists to their agent.

Compliance Officer

Uses the tool to ensure all contract documentation is organized and audit-ready.

What Changes When You Connect

- 01 Prevents accidental automatic renewals by tracking notice windows.
- 02 Reduces manual tracking by generating chronological timelines automatically.

-
- 03 Standardizes provider reviews with structured meeting agendas.
-
- 04 Organizes audit documentation through structured storage plans.
-

Real-World Applications

Preventing Auto-Renewals

Use the action list to identify contracts where the notice window is closing soon.

Vendor Performance Reviews

Generate a review agenda to lead a meeting regarding a specific provider's service quality.

Contract Scheduling

View a full renewal calendar to plan your procurement budget and timing for the year.

Audit Preparation

Create a folder plan to ensure all decision-making evidence is stored correctly for compliance.

Patterns to Avoid

Manual Spreadsheet Tracking

❌ AVOID

You spend hours manually updating an Excel sheet with expiration dates and notice windows for fifty different vendors.

✓ INSTEAD

Let your agent build a chronological timeline of all upcoming critical dates using ``get_renewal_calendar`` instead.

Reactive Renewal Management

❌ AVOID

You realize a major service contract auto-renewed yesterday because you missed the notice window in your inbox.

✓ INSTEAD

Check ``get_action_list`` to see exactly which contracts require a decision right now to prevent accidental renewals.

Disorganized Audit Prep

❌ AVOID

A compliance auditor asks for proof of a vendor decision and you spend the afternoon hunting through old email threads.

✓ INSTEAD

Use ``get_evidence_folder_plan`` to create a structured plan for where to store your documentation.

The Right Fit

Procurement managers and operations leads should connect this MCP if they manage multiple vendor contracts. It is not for individuals with a single service provider. The decision depends on whether you need to automate the tracking of notice windows to prevent accidental renewals.

Care Service Renewal Calendar Tools

These tools handle the heavy lifting of contract orchestration by turning raw renewal parameters into a structured schedule.

#	TOOL	DESCRIPTION
01	get_action_list	This tool provides a high-priority checklist of decisions that are currently active or imminent. It tells you exactly which contracts require a cancel or renew decision right now.
02	get_evidence_folder_plan	This tool organizes a structured plan for your documentation. It outlines how and where to store files to support your decisions and satisfy audit requirements.
03	get_provider_review_agenda	This tool builds a structured meeting agenda for decision owners. It helps you evaluate a specific provider's performance during scheduled reviews.
04	get_renewal_calendar	This tool generates a chronological timeline of all upcoming critical dates. It uses service names, expiration dates, and notice windows to map out your contract schedule.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Generate a renewal calendar for my contracts.

Here is your renewal timeline: [Contract A: Expiration Oct 1, Notice Deadline Sept 1; Contract B: Expiration Dec 15, Notice Deadline Nov 15].

U What are my most urgent renewal decisions?

You have 2 imminent actions: Renew 'Cloud Services' by Friday or cancel 'Office Supplies' before the notice window closes tomorrow.

U Create a review agenda for the software provider including price analysis.

Agenda for Software Provider: 1. Performance Review (based on satisfaction notes), 2. Price Analysis (showing a 15% increase from \$1000 to \$1150), 3. Final Decision.

Frequently Asked Questions

01 How does this MCP prevent accidental renewals?

It tracks the notice window days for each contract and provides a high-priority action list of imminent decisions.

02 What AI clients can I use with this MCP?

You can use any MCP-compatible client like Claude, Cursor, Windsurf, or VS Code.

03 Can I use this to prepare for vendor meetings?

Yes, you can use the tool to create structured meeting agendas specifically for evaluating provider performance.

04 Does Vinkius host the MCP?

Yes, Vinkius hosts and manages the MCP so it is ready to use immediately upon connection.

05 What information is needed for the renewal calendar?

The tool requires the service name, expiration date, and the number of days in the notice window for each contract.

06 How does the tool help prevent automatic contract renewals?

The ``get_renewal_calendar`` tool calculates the exact date to provide notice by subtracting the notice window from the expiration date, ensuring you act before the window closes.

07 Can I include price changes in the provider review?

Yes, when using ``get_provider_review_agenda``, you can set the price analysis flag to true to include a detailed breakdown of percentage changes between current and proposed pricing.

08 What kind of documentation can I plan for?

The ``get_evidence_folder_plan`` tool organizes documentation into Legal, Financial, and Performance tiers to support audits and decision-making.
