MCP SERVER | NO CODE | CLOUD HOSTED

Caregiver Routine Handoff MCP

A single timeline for consistent, safe patient care.

Caregiver Routine Handoff MCP builds a unified, chronological guide for caregivers by pulling together schedules, meals, and safety protocols. Instead of digging through scattered notes, your AI client can instantly provide a clear daily timeline, dietary restrictions, and emergency contact info to keep care consistent and safe.

A+ Quality Score 100/100

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Caregiver Routine Handoff MCP

4 tools available
Cloud-hosted on Vinkius

You shouldn't have to hunt through multiple documents to figure out a patient's schedule or dietary needs. This MCP gives your AI client the ability to act as a central intelligence hub for caregiving. It pulls fragmented data into a single, linear timeline so you can see exactly what needs to happen and when.

When you're managing shifts or handoffs, you can ask your agent to pull a complete daily guide that merges activities with specific comfort preferences. It also keeps critical safety information at your fingertips. You can quickly check dietary profiles to prevent meal errors or pull emergency protocols to find contact details and escalation steps immediately. It's designed to reduce the mental heavy lifting required to maintain a steady, safe routine for the person in your care.

Core Capabilities

01 — Timeline Generation

Your agent creates a chronological list of daily events and activities.

02 — Dietary Oversight

The AI checks specific food restrictions and dietary profiles before suggesting meal plans.

03 — Emergency Access

Your client pulls contact info and escalation steps during urgent situations.

04 — Preference Tracking

The AI retrieves non-medical comfort preferences to ensure routine consistency.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/caregiver-routine-handoff** — connect your AI agent in three steps.

01 Connect the MCP to your preferred AI client via Vinkius.

02 Ask your agent for a specific daily guide or dietary profile.

03 The MCP pulls the relevant data from the care records.

04 Your AI client presents a clear, actionable timeline or list.

Get your care data into a single conversational interface.

Built For

This MCP is built for professionals managing direct patient care and daily routines.

Home Health Aides

They use the AI to quickly check daily schedules and dietary needs during shifts.

Nursing Staff

They use the tool to manage handoffs and access emergency protocols.

Care Coordinators

They use the timeline features to ensure all care requirements are met across different caregivers.

What Changes When You Connect

01 Reduces cognitive load by merging schedules and preferences into one timeline.

02 Prevents dietary errors by providing instant access to restriction profiles.

03 Speeds up emergency response by surfacing contact and escalation data.

04 Maintains care consistency through access to non-medical comfort preferences.

Real-World Applications

Shift Handoffs

A new caregiver asks the AI for the daily guide to understand the day's flow immediately.

Meal Preparation

The AI checks the dietary profile to ensure a meal meets all specific restrictions.

Emergency Response

A caregiver uses the AI to find the correct escalation steps during a medical event.

Routine Maintenance

The AI uses comfort preferences to suggest how to handle specific daily activities.

Patterns to Avoid

Manual data hunting

AVOID

A nurse spends ten minutes digging through paper files to find a patient's allergy list during a shift change.

✓ INSTEAD

Ask your agent to pull the specific dietary requirements using `get_dietary_profile` for instant access.

Vague scheduling requests

AVOID

You ask your AI client to tell you what is happening today without specifying a date.

✓ INSTEAD

Request a full chronological timeline for a specific date by using `get_daily_guide`.

Ignoring non-medical needs

AVOID

A caregiver follows the medical schedule but ignores the patient's specific comfort habits, causing distress.

✓ INSTEAD

Use `get_comfort_preferences` to ensure the daily routine respects the patient's personal preferences.

The Right Fit

Connect this MCP if you manage direct patient care or coordinate shifts for nursing staff. Do not connect it if you only handle administrative billing or long-term facility logistics. The decision depends on whether your team needs real-time access to daily patient routines and safety protocols.

Caregiver Routine Handoff MCP Tools

These tools give your agent direct access to patient schedules, dietary needs, and emergency protocols.

#	TOOL	DESCRIPTION
01	`get_comfort_preferences`	This tool retrieves non-medical preferences to help maintain routine consistency and patient comfort.
02	`get_daily_guide`	This tool generates a complete, chronological timeline of all scheduled events for a specific date.
03	`get_dietary_profile`	This tool provides a summary of all dietary requirements and restrictions for the individual.
04	`get_emergency_protocols`	This tool gives you immediate access to contact information and specific escalation procedures.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Can you show me the daily schedule for 2024-12-25?

Here is the daily guide for 2024-12-25: 08:00 - Breakfast (Low sodium meal), 10:00 - Morning Walk (Use mobility aid), 12:00 - Lunch (Soft foods only).

U What are the emergency contact details for subject ID 123?

The primary contact is Jane Doe (Relative) at 555-0199. Escalation steps: 1. Contact Jane, 2. Call emergency services.

U What are the dietary restrictions for this patient?

The patient has the following restrictions: Low sodium diet, no peanuts, and prefers soft foods.

Frequently Asked Questions

01 **How does this MCP help with caregiver handoffs?**

It creates a single, chronological timeline of all activities and preferences, so the incoming caregiver doesn't have to search through multiple notes.

02 **Can I use this with Claude or Cursor?**

Yes, you can connect this MCP to any MCP-compatible client like Claude, Cursor, or Windsurf.

03 **Does it handle emergency information?**

Yes, it includes a tool to retrieve emergency protocols and contact information for immediate escalation.

04 **Can it manage dietary restrictions?**

Yes, the dietary profile tool provides a summary of all food requirements and restrictions for the individual.

05 **Is the data hosted by Vinkius?**

Yes, Vinkius hosts the MCP and manages the connections so it is ready to use immediately.

06 **How does the daily guide handle dietary restrictions?**

The `get_daily_guide` tool automatically integrates dietary restrictions from the `get_dietary_profile` into the relevant meal descriptions in the timeline.

07 **Can I access emergency contacts quickly?**

Yes, you can use the `get_emergency_protocols` tool to immediately retrieve primary contacts and escalation steps.

08 **What information is included in the daily guide?**

The guide includes a chronological timeline of activities, meal times, dietary restrictions, comfort preferences, and emergency protocols.
