MCP SERVER | NO CODE | CLOUD HOSTED

Charity Run Team Planner MCP

Keep your running team organized from registration to race day.

Charity Run Team Planner MCP handles the heavy lifting for race organizers and team leads. Your AI client uses this to track participant registration, monitor fundraising progress, manage apparel orders, and coordinate training schedules or travel plans. It turns your agent into a logistics coordinator that keeps every runner on track.

A+ Quality Score 100/100

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Charity Run Team Planner MCP

5 tools available
Cloud-hosted on Vinkius

Running a charity team involves too many moving parts to track in a spreadsheet. This MCP gives your AI client the ability to act as a dedicated logistics coordinator. You can ask your agent to check if a specific runner has finished their registration or if the team is hitting its fundraising goals. Instead of digging through emails for shirt sizes or travel details, you just ask.

Your agent can monitor the entire team's progress, from tracking total donations to managing apparel inventory. It also handles the physical preparation side of things. You can pull up upcoming training sessions or look over travel arrangements to ensure everyone arrives at the event on time. It's built to handle the specific needs of race organizers and team captains who need real-time updates without the manual data entry.

Core Capabilities

01 — Registration Tracking

Your agent checks individual runner status to ensure everyone is signed up.

02 — Fundraising Oversight

The AI monitors total team donations against your set goals.

03 — Gear Management

Your agent tracks apparel inventory and size requirements for the team.

04 — Schedule Coordination

The AI provides updates on upcoming training sessions and travel plans.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/charity-run-team-planner** — connect your AI agent in three steps.

01 Connect your preferred AI client to Vinkius.

02 Select the Charity Run Team Planner MCP from the catalog.

03 Ask your agent questions about registration, fundraising, or schedules.

04 The agent uses the specific tools to pull real-time data and give you answers.

You connect the MCP to your AI client and start asking questions about your team.

Built For

This MCP is designed for people managing large groups of runners for charitable events.

Race Organizers

They hand off registration and apparel tracking to the AI.

Team Captains

They use the agent to monitor fundraising and training schedules.

Event Coordinators

They delegate travel planning and logistics to the AI client.

What Changes When You Connect

01 Centralizes registration and fundraising data in one place.

02 Automates the checking of individual participant progress.

03 Reduces manual tracking of apparel and gear needs.

04 Keeps training and travel logistics organized through your AI client.

Real-World Applications

Fundraising Audits

Ask your agent for a quick update on how close the team is to their donation goal.

Apparel Ordering

Use the agent to verify shirt sizes and inventory before placing a team order.

Training Reminders

Check the training schedule to tell runners when and where to meet.

Travel Logistics

Verify travel arrangements to ensure the team arrives at the race site together.

Patterns to Avoid

Manual Spreadsheet Updates

AVOID

You spend your Saturday afternoon typing registration numbers from emails into a massive Excel sheet to see if the team is ready.

✓ INSTEAD

Let your agent handle the heavy lifting. Use `get_participant_status` to pull real-time registration and fundraising data instantly.

Guessing Apparel Needs

AVOID

You place a bulk order for team shirts based on last year's numbers and end up with twenty extra smalls and no large.

✓ INSTEAD

Check your actual requirements first. Use `manage_apparel_inventory` to see exactly what sizes your current runners need before you buy.

Fragmented Logistics Planning

AVOID

You send out ten different emails to confirm where everyone is staying and when the training runs start.

✓ INSTEAD

Keep everything in one place. Use `view_training_schedule` and `coordinate_travel_plan` to keep the team on the same page.

The Right Fit

Connect this MCP if you are a race organizer or team captain managing dozens of runners. If you are just running solo or managing a tiny group of three friends, you don't need this. The deciding factor is whether your logistics are currently scattered across emails, texts, and spreadsheets.

Charity Run Team Planner 5 Tools

These tools let your agent manage everything from individual runner registration to team-wide travel and gear logistics.

#	TOOL	DESCRIPTION
01	`get_participant_status`	This tool checks a specific runner's registration and fundraising status. It's how you find out if someone is fully signed up and how much they've raised.
02	`manage_apparel_inventory`	Use this to handle team gear. It lets your agent view and manage the apparel requirements for your runners.
03	`track_fundraising_totals`	This tool monitors the collective fundraising progress for the whole team. It gives you a bird's-eye view of your total donations.
04	`view_training_schedule`	This tool pulls up the upcoming training sessions for the team. It's the quickest way to see when the next run is happening.
05	`coordinate_travel_plan`	This tool manages and displays travel arrangements. It helps you keep track of how the team is getting to the event.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What is the status of participant runner-123?

Runner-123 is currently Registered, has raised $150 towards their $200 target, and is assigned a size Medium shirt.

U How much has team-alpha raised so far?

Team-alpha has raised $4,500 out of a total goal of $5,000, reaching 90% completion.

U When is the next training session for team-beta?

The next training session for team-beta is scheduled for 2024-06-15 at Central Park, requiring an intermediate skill level.

Frequently Asked Questions

01 **What AI clients can I use with this MCP?**

You can use any MCP-compatible client, including Claude, Cursor, Windsurf, and VS Code.

02 **Do I need to host the MCP myself?**

No. Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect.

03 **Can I track individual runners?**

Yes. You can use the get_participant_status tool to check registration and fundraising for a specific person.

04 **How does it help with fundraising?**

The track_fundraising_totals tool allows your agent to monitor the total money raised by the entire team.

05 **Can it manage team gear?**

Yes. The manage_apparel_inventory tool lets you view and handle the team's apparel requirements.

06 **How can I check if a runner has met their fundraising goal?**

You can use the `get_participant_status` tool to see the `fundraisingProgress` and `targetAmount` for any specific participant.

07 **How do I know how many shirts to order for my team?**

Use the `manage_apparel_inventory` tool to get a detailed `sizeBreakdown` of all registered participants.

08 **Can I see the total amount raised by the whole group?**

Yes, the `track_fundraising_totals` tool provides the `totalRaised` and the `completionPercentage` for the entire team.

Go Live in 60 Seconds

Get your connection token from **cloud.vinkius.com**, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

```
https://edge.vinkius.com/[TOKEN]/mcp
```

CLIENT	WHERE TO CONFIGURE
Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add `"charity-run-team-planner": { "url": "…" }`
Windsurf	MCP Settings → `mcp_settings.json` → Add endpoint URL
ChatGPT	Settings → Tools & plugins → Add MCP server → Paste endpoint
Gemini	Extensions → Add MCP Server → Paste endpoint URL
