Chore Points Total is a reward MCP.

Turn household tasks into a trackable point system.

Chore Points Total connects your AI client to a household reward system. It lets your agent manage chores, track point balances, and log completed tasks. Use it to automate the tedious parts of managing household responsibilities and keep everyone motivated through a clear, digital reward structure.

tracking

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Chore Points Total MCP

4 tools available

Cloud-hosted on Vinkius

You can use this MCP to bring structure to household management. Instead of manual tracking or messy spreadsheets, your AI client handles the heavy lifting. You can ask your agent to find out what needs to be done, check how many points you have left to spend, or log a task the moment it's finished. It turns daily responsibilities into a predictable, gamified system. Your agent acts as the interface between the physical work happening in your home and the digital record of rewards. It's a simple way to keep things organized and fair without constant manual updates.

Core Capabilities

01 — Balance Tracking

Your agent checks current point totals whenever you ask about rewards.

02 — Task Discovery

The AI identifies which chores are ready to be picked up.

03 — Reward Logging

Your agent updates the system immediately after a chore is finished.

04 — Activity Auditing

The AI reviews the history of all completed tasks on demand.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/chore-points-total — connect your AI agent in three steps.

- 01
- Connect your preferred MCP-compatible client to Vinkius.
- 02
- Select the Chore Points Total MCP from the catalog.
- 03
- Ask your agent to list available chores or check a balance.
- 04
- Tell your agent when a task is done to update the points.

Setting up this MCP takes just a few steps to get your agent working.

Built For

This MCP is built for anyone looking to gamify household management through an AI interface.

Parents

Hand off chore tracking and reward distribution to an AI agent.

Roommates

Use the AI to manage shared responsibilities and point balances fairly.

Educators

Apply the reward logic to student task management and incentive tracking.

What Changes When You Connect

- 01
- Automates the math behind reward point accumulation.
- 02
- Provides a central digital log for all household tasks.
- 03
- Removes the friction of manual point updates.

Real-World Applications

Daily Chore Management

Ask your agent what needs to be done today to earn points.

Reward Verification

Check a user's balance to see if they have enough points for a reward.

Accountability Tracking

Review the chore history to see who has been contributing most recently.

Gamified Motivation

Use the point system to encourage consistent participation in chores.

Patterns to Avoid

Manual Spreadsheet Updates

❌ AVOID

You try to manually calculate everyone's points in a notebook or spreadsheet after chores are done.

✓ INSTEAD

Let your agent handle the math and record the work immediately using ``complete_chore``.

Vague Reward Requests

❌ AVOID

You ask your agent if anyone has enough points for a prize without checking specific totals.

✓ INSTEAD

Ask your agent to run ``get_user_balance`` for a specific person to get an exact number.

Missing Task Visibility

❌ AVOID

You wonder why no one is helping around the house and assume everyone is being lazy.

✓ INSTEAD

Use ``list_available_chores`` to see what tasks are actually waiting to be picked up.

The Right Fit

Connect this MCP if you want to replace manual chore tracking with a digital, gamified system. Do not connect it if you prefer using physical chore charts or manual spreadsheets. The decision depends on whether you want your AI client to act as the primary record keeper for household tasks.

Chore Points Total Tools for Household Management

These tools give your agent the ability to manage chore lists, track user balances, and log completed tasks.

#	TOOL	DESCRIPTION
01	complete_chore	This tool lets your agent mark a specific chore as finished to claim the associated reward points.
02	get_chore_history	Use this to have your agent pull up a full log of past chore activity and completed tasks.
03	get_user_balance	This tool allows your agent to check the current total of reward points for a specific user.
04	list_available_chores	Your agent uses this to see the full list of chores currently available to be performed.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U How many points does user_123 have?

User user_123 currently has 150 reward points.

U What chores can I do in the Kitchen?

In the Kitchen, you can complete 'Wash Dishes' (10 points) or 'Clean Microwave' (15 points).

U I just finished the 'Vacuum Living Room' chore. My user ID is user_456 and the chore ID is chore_789.

Success! You earned 20 points. Your new balance is 85 points.

Frequently Asked Questions

01 How do I connect this to my AI client?

You connect once through your client like Claude or Cursor using the Vinkius connection settings. Vinkius hosts the MCP so it is ready to run immediately.

02 Can I use this with Cursor or Windsurf?

Yes, this MCP works with any compatible client including Cursor, Windsurf, and VS Code.

03 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you. You just connect and start using the tools.

04 What happens when I finish a chore?

You tell your agent you finished the task, and it uses the `complete_chore` tool to add points to your balance.

05 Is there a way to see what I've done in the past?

Yes, your agent can use the `get_chore_history` tool to show you a log of your previous activity.

06 How do I see how many points I have?

You can use the `get_user_balance` tool by providing your unique user ID to see your current total.

07 Can I see what tasks are available to do?

Yes, use the `list_available_chores` tool to see all tasks and the points they are worth. You can also filter by category.

08 How do I claim my points after finishing a chore?

Once a task is finished, use the `complete_chore` tool with your user ID and the specific chore ID to add the points to your balance.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
