

MCP SERVER

NO CODE

CLOUD HOSTED

ClubReady MCP for AI Agents

Manage Member Records, Check-ins, and Billing Status

ClubReady MCP gives your AI agents full access to manage any fitness facility's core operations. Use it to search member profiles, process check-ins instantly, track billing balances for collections, schedule classes, and monitor staff roles—all through natural conversation.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

ClubReady MCP

11 tools available

Cloud-hosted on Vinkius

This connection links your gym's entire operation into your AI client. You can run complex queries that used to take a full day of clicking between separate tabs. Need to know if John Smith is active and paid up? Ask your agent. Need the roster for tomorrow's spinning class, including waitlist spots? Ask it. The MCP lets you handle everything from billing status checks to logging daily check-ins, making sure every detail stays accurate. When you connect this through Vinkius, your AI client treats your gym data like a native system, letting you manage members, classes, and revenue streams instantly.

Core Capabilities

01 — Find member details

Search the database by name, email, or phone number to view a member's profile, status, and check-in history.

03 — Review billing and collections data

Pull detailed information on a member's account balance, payment history, and past-due amounts to manage collections efforts.

05 — List facility staff records

View profiles of trainers, managers, and front desk employees, including their certifications and roles at the gym.

02 — Check in members at the door

Validate membership status against current rules, record the visit, and trigger physical door access for immediate entry.

04 — Manage class schedules and rosters

Get the group fitness schedule for any date range and list exactly which members are signed up or waiting for specific classes.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/clubready — connect your AI agent in three steps.

- 01** Connect your AI client to this MCP within Vinkius. This gives your agent read/write access to all core fitness operations data.
- 02** Tell your agent what you need—for example, 'Check the billing status for John Smith' or 'List the roster for tomorrow's yoga class.'
- 03** Your agent executes the necessary tool call against the ClubReady system and returns a structured answer containing real-time membership, financial, or scheduling data.

The bottom line is you talk to your AI client like talking to a front desk employee who knows every member's account details instantly.

Built For

This MCP is essential for gym owners and managers running multi-location facilities. It solves the pain of juggling separate systems for billing, scheduling, and check-ins, allowing staff to operate from a single conversation.

Front Desk Staff

Using this MCP, you can instantly validate membership status, look up account details, process check-ins via barcode scan, and find the correct contact for any member.

Billing/Collections Specialist

You use it to run reports on past-due accounts, checking balances and payment statuses for multiple members quickly without manual database queries.

Sales Manager

Your agent lists potential leads (prospects) and tracks their source and assigned salesperson, keeping the sales pipeline current for follow-up.

What Changes When You Connect

-
- 01 Instant member insights. Instead of manually searching by name or barcode, you can ask your agent to find a member's profile details using the `search_members` tool instantly.

 - 02 Automated check-ins. The `do_check_in` function validates membership status and grants door access in one step, removing manual verification at the front desk.

 - 03 Streamlined collections. You can run reports on overdue accounts by calling `get_member_billing`, quickly identifying who needs a payment reminder without deep diving into separate finance software.

 - 04 Complete class visibility. Get accurate capacity counts and waitlist status by using `list_class_roster` for any group fitness session, improving resource planning.

 - 05 Staff oversight. The `list_staff` tool gives you an immediate directory of every employee's role and certifications when you need to verify credentials.
-

Real-World Applications

A member arrives with a questionable status

A member claims they are active, but the system shows a billing issue. You ask your agent to check their records. The MCP uses `search_members` and then `get_member_billing` to confirm the profile is valid but flag an outstanding balance of \$150, telling you exactly what's wrong.

Quickly staffing a new class

You need to know who showed up for tomorrow's Advanced Cycling. You ask your agent and it uses `list_class_roster` to show that 14 out of 20 spots are filled, and three people have already checked in early.

Reviewing the day's attendance

The manager asks for a count of how many unique members used the facility today. Your agent uses ``list_check_ins`` to pull all records, filter them by date, and provide an immediate total headcount.

Identifying new sales targets

The owner wants to know which leads are ready for a follow-up call. You ask your agent to list prospects using ``list_prospects``, which instantly delivers the lead names, their source, and who owns them.

Patterns to Avoid

Trying to manually update billing records

X AVOID

A user tries to tell the AI: 'Change John Smith's payment status to paid.' The system needs permission or specific financial APIs for that. This MCP only provides read access.

✓ INSTEAD

To get current billing data, use ``get_member_billing``. If you need to run a bulk action (like sending reminders), ask your agent to analyze the output from ``list_prospects`` first.

Assuming class capacity is always visible

X AVOID

A user asks: 'How many people fit in the studio?' The MCP needs specific data. It doesn't know physical limits; it only knows booked spots and waitlist positions.

✓ INSTEAD

To see current utilization, use ``list_class_roster``. This tool reports both the number of members enrolled and their actual check-in status.

Confusing member search with staff list

X AVOID

A user asks: 'Who is Sarah?' The MCP needs context. If they mean a client, use ``search_members``. If they mean an employee, use ``list_staff``.

✓ INSTEAD

The Right Fit

Use this MCP if your primary pain point involves cross-referencing operational data: linking a member's profile to their current billing status, or connecting a class booking to staff certifications. It handles the full lifecycle of gym management—from lead generation (`list_prospects`) through daily entry validation (`do_check_in`). Don't use it if your need is purely internal HR documentation that isn't tied to membership data (e.g., payroll processing). For

complex, multi-system financial reconciliation beyond just checking a balance, you'll need specialized accounting software integration; this MCP focuses strictly on the fitness facility operational layer.

ClubReady MCP: Managing Member Profiles and Check-ins

Right now, managing member entry is a mess. Staff have to manually check barcodes against membership databases, then cross-reference that status with the billing system just to confirm access. It's slow, and human error happens constantly.

With this MCP, your agent handles it all in one prompt. You ask for a check-in, and the tool uses `do_check_in` to validate active membership, record the visit, and grant door access—all instantly and reliably.

ClubReady MCP: Tracking Billing Status and Sales Prospects

Handling collections requires jumping between the main member portal and a separate billing ledger. You have to copy over account IDs, manually compare past-due amounts, and determine who is ready for a sales pitch.

Now, your agent pulls that data together. It uses `get_member_billing` alongside `list_prospects`, giving you immediate insight into both overdue payments and the potential revenue from leads, all in one view.

Eleven Tools for Gym Operations and Membership Data

These tools let you search member profiles, validate status, handle billing records, list attendance, and manage facility staff details using your AI agent.

#	TOOL	DESCRIPTION
01	<code>search_members</code>	Searches gym members using criteria like name or email to retrieve profile, membership status, and check-in history.
02	<code>list_membership_plans</code>	Retrieves details on all available pricing structures, including billing frequency and initiation fees.
03	<code>get_store_info</code>	Fetches general location information for the gym facility.
04	<code>get_member</code>	Retrieves a specific member's full profile details and current status within the system.
05	<code>get_member_billing</code>	Provides critical billing information, useful for collections efforts, showing balances and payment history.
06	<code>list_check_ins</code>	Generates a record of daily check-ins, detailing member name, time, barcode used, and membership type, with date filtering.
07	<code>do_check_in</code>	Performs the actual check-in process: validating the member's status, recording the visit, and granting door access. It reports success or failure reasons.
08	<code>list_schedule</code>	Displays the full group fitness schedule, allowing you to filter results by a specific date range.
09	<code>list_class_roster</code>	Lists members for a specific class, showing who checked in, waitlist positions, and which membership plan they used.
10	<code>list_prospects</code>	Provides the sales pipeline list of potential customers (leads), essential data for gym sales teams.
11	<code>list_staff</code>	Lists all facility staff, including their specific role, certifications, and contact information within the gym.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Show me John Doe's status today.

✔ **Profile Summary:**

- 👤 Name: John Doe (ID: 45231)
- 📄 Membership: Premium All-Access (\$89/month)
- 💰 Billing Status: PAID through April 30.
- 📅 Last Check-in: Today, 10:15 AM.
- 🇺🇸 This is his 47th visit this year.

U What's the plan for Advanced Cycling tomorrow?

Advanced Cycling Roster (Tomorrow)

- **Total Capacity:** 20 spots
 - **Members Booked:** 14
 - **Waitlist:** Empty
 - **Checked In So Far:** 3 members (Status: Active)
- Action:* Waitlist remains open until capacity is reached.

U Find all overdue accounts over \$50

🔔 **Billing Report:** Found 8 members with outstanding balances exceeding \$50.

- Michael R.: \$150 past due (Premium Plan)
- Emma W.: \$89 past due (Student Plan)
- James B.: \$62 past due (Annual Membership)

Do you want me to draft automated payment reminders for these users?

Frequently Asked Questions

01 Can the ClubReady MCP help with daily check-ins and membership verification?

Yes, it can. You simply ask your agent to perform a check-in. The MCP validates if the member's plan is active and paid up, then records the visit and triggers door access automatically.

02 How do I use this ClubReady MCP for tracking billing and collections?

You ask your agent to list members with specific billing criteria. It uses the underlying financial data to pull overdue amounts, helping you prioritize follow-up calls without leaving your chat interface.

03 Does this MCP track class schedules and waitlists for my gym?

Absolutely. You can ask it to list the roster for any specific fitness class. It shows who is booked, how many spots are left, and if there's a current waitlist.

04 Is this MCP good for managing new leads or prospects?

Yes, it keeps your sales pipeline organized. You can ask the agent to list all potential clients (prospects), seeing who they are, where they came from, and which salesperson owns that lead.

05 Can I use this MCP with my AI client for staff management?

Yes. It provides a full directory of your facility staff. You can pull up profiles listing their roles, certifications, and contact information instantly when needed.
