Commission Total is a finance MCP.

Get instant breakdowns of agent earnings and transaction totals.

Commission Total handles the math and organization of your commission data. Your AI client uses this MCP to sum up specific amounts, filter transactions by category, and pull detailed earnings reports for individual agents. It also includes a validation step to make sure every entry follows your business rules.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Commission Total MCP

4 tools available

Cloud-hosted on Vinkius

You can stop manually auditing commission spreadsheets. This MCP gives your AI client the ability to process financial data with precision. Instead of you doing the math, you just tell your agent to sum up a list of entries or find out how much a specific person earned this month.

If you need to see how much came from a specific category, the MCP filters those entries for you. It also acts as a gatekeeper for your data. You can use it to check if a new commission entry is valid before it hits your books, ensuring everything meets your specific business requirements. It turns your AI into a specialized financial assistant that understands your commission structures.

Core Capabilities

01 — Commission Aggregation

Your agent sums up large lists of commission amounts instantly.

02 — Category Filtering

The AI pulls only the transaction types you care about from a larger dataset.

03 — Agent Reporting

Your client generates specific earnings summaries for individual team members.

04 — Data Validation

The MCP checks individual entries to ensure they meet your business rules.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/commission-total — connect your AI agent in three steps.

- 01
- Connect the Commission Total MCP to your AI client via Vinkius.
- 02
- Provide your commission data or list of entries to your agent.
- 03
- Ask your agent to perform a specific task like summing totals or filtering types.
- 04
- The agent executes the corresponding tool and gives you the result.

Connecting this MCP to your workflow takes seconds.

Built For

This MCP is built for professionals managing sales teams or financial records who need to move quickly between data entry and reporting.

Sales Operations Manager

Hands off commission calculation and agent performance tracking to the AI.

Accountant

Uses the tool to validate entries and aggregate totals for financial reporting.

Business Owner

Checks agent earnings and transaction breakdowns without manual spreadsheet work.

What Changes When You Connect

- 01
- Eliminates manual math errors by letting the AI handle all summations.
- 02
- Speeds up reporting by filtering transaction types on command.
- 03
- Reduces data entry mistakes through automated entry validation.

04 Provides instant agent-specific earnings breakdowns.

Real-World Applications

End of Month Payouts

Your agent sums up all valid commissions to prepare agent payouts.

Performance Auditing

You ask the AI to compare earnings across different transaction categories for a specific agent.

Data Integrity Checks

The AI runs validation on new entries to ensure they fit business requirements.

Sales Category Analysis

You filter a long list of commissions to see only specific service or retail types.

Patterns to Avoid

Manual math in the prompt

❌ AVOID

You paste a list of 50 commissions and ask your agent to add them up manually in the chat window.

✓ INSTEAD

Let the MCP handle the math by using ``get_total_commission`` to ensure the sum is exact.

Blindly accepting new entries

❌ AVOID

You add a new commission row to your spreadsheet without checking if the numbers follow your company rules.

✓ INSTEAD

Run the entry through ``validate_commission_entry`` first to catch errors before they hit your books.

Broad, unhelpful data requests

❌ AVOID

You ask your agent to show you all commission data at once when you only care about retail sales.

✓ INSTEAD

Use ``filter_commissions_by_type`` to narrow the dataset down to the specific categories you need.

The Right Fit

Connect this MCP if you manage sales teams or handle financial reporting where manual math errors are a risk. Do not connect it if your commission process is already fully automated through a dedicated accounting software. The deciding factor is whether you still spend time auditing spreadsheets or validating individual entries.

Commission Total 4 Tools

These tools handle everything from simple math to complex agent earnings reports and data validation.

#	TOOL	DESCRIPTION
01	get_commission_summary_by_agent	This tool generates a detailed breakdown of total earnings for a specific agent across different transaction types.
02	get_total_commission	This tool calculates the sum of all commission amounts in a provided list.
03	validate_commission_entry	This tool checks a single commission entry against your business requirements to ensure it is valid.
04	filter_commissions_by_type	This tool isolates specific commission entries that match a chosen transaction category.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U What is the total sum of these commissions: 150.50, 200.00, and 50.25?

The total sum of the commissions is 400.75.

U Show me the commission summary for agent 'A123'.

Agent A123 has earned a total of 1250.00, with 800.00 from Retail and 450.00 from Wholesale.

U Filter the commissions to only show 'Service' types.

The filtered commissions for 'Service' are: 100.00, 250.00, and 75.00.

Frequently Asked Questions

01 How do I use this MCP with Claude?

You connect to the Vinkius catalog and then add the Commission Total MCP to your Claude desktop app. Once connected, you can start asking Claude to process your commission data.

02 Can this MCP validate my financial entries?

Yes. It includes a tool specifically designed to check if a single commission entry meets your defined business requirements.

03 Can I see how much a specific person earned?

Yes. You can use the agent summary tool to get a breakdown of earnings for a specific agent across different transaction types.

04 Does this work for different types of transactions?

Yes. You can use the filtering tool to isolate specific transaction categories from your commission lists.

05 Do I need to host this myself?

No. Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect your client.

06 How do I sum multiple commissions?

You can use the ``get_total_commission`` tool by providing a list of commission amounts.

07 Can I see a breakdown of earnings by transaction type?

Yes, the ``get_commission_summary_by_agent`` tool provides both the total amount and a breakdown by transaction type for a specific agent.

08 How can I verify if a commission entry is valid?

Use the ``validate_commission_entry`` tool to check if an entry has a positive amount, a valid agent ID, and a valid type.
