Creative Archive Legacy Plan MCP.

Turn your creative assets into a structured succession plan.

Creative Archive Legacy Plan MCP helps you organize the long-term management of your creative works. It provides the tools to build stewardship strategies, set access rules for your successors, and map out the physical and digital steps needed to preserve your estate for the future.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Creative Archive Legacy Plan MCP

5 tools available

Cloud-hosted on Vinkius

You've spent years building a body of work. This MCP ensures that work doesn't get lost or mismanaged when you aren't the one making the decisions. Instead of leaving a messy pile of files and vague wishes, you use this MCP to build a formal framework for your estate. You can define exactly how authorized people interact with your archives, what physical documents need to be organized, and when key decisions must be revisited. It turns abstract intentions into a concrete roadmap that your executors can actually follow. Whether you are managing a massive art collection or a digital archive, this tool gives your agent the ability to draft the specific plans and agendas required to keep your legacy intact.

Core Capabilities

01 — Estate Strategy

Your agent uses this to build a management plan for your creative assets.

02 — Access Control

Your agent defines how successors interact with your work.

03 — Physical Preservation

Your agent lists the real-world tasks needed to keep your archives organized.

04 — Decision Mapping

Your agent tracks future dates when your estate must make significant choices.

05 — Executor Guidance

Your agent builds meeting agendas to help successors evaluate the estate.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/creative-archive-legacy-plan — connect your AI agent in three steps.

- 01 Connect your AI client to the Creative Archive Legacy Plan MCP via Vinkius.
- 02 Tell your agent what kind of creative estate you are managing.
- 03 Use the tools to generate plans, access rules, or documentation lists.
- 04 Review the structured outputs and save them for your executors.

Connect your preferred AI client to the Vinkius-hosted MCP to start planning.

Built For

This MCP is built for creators who want to ensure their life's work is handled according to their specific wishes.

Artists and Collectors

They use the MCP to organize physical collections and define curation rules.

Digital Archivists

They use the tools to map out succession and access instructions.

Estate Executors

They use the generated agendas to manage periodic reviews of the estate.

What Changes When You Connect

- 01 Converts vague wishes into actionable stewardship plans.
- 02 Provides clear instructions for authorized successors.
- 03 Identifies necessary physical organization tasks.

04 Creates a schedule for future decision points.

Real-World Applications

Art Collection Management

Define how a collection should be curated and who has the right to view specific pieces.

Digital Asset Succession

Set up instructions so your heirs can access and manage your digital creative files.

Physical Archive Organization

Draft a list of tasks to label and store physical documents and artifacts.

Executor Briefing

Generate a structured agenda to guide executors through their periodic review meetings.

Patterns to Avoid

Vague estate intentions

❌ AVOID

Telling your agent you want your art to be 'well taken care of' after you pass away.

✓ INSTEAD

Use ``generate_stewardship_plan`` to turn those general wishes into a concrete management strategy for your entire estate.

Ignoring physical assets

❌ AVOID

Focusing only on digital files while leaving your physical sketches and canvases in unorganized boxes.

✓ INSTEAD

Run ``draft_documentation_actions`` to get a specific list of physical tasks required to preserve your legacy.

Reactive decision making

❌ AVOID

Waiting until an executor is overwhelmed to figure out when the next major estate choice needs to happen.

✓ INSTEAD

Use ``map_future_decision_points`` to identify exactly when your estate will need to make significant choices.

The Right Fit

Connect this MCP if you own a significant collection of physical or digital creative works and want to formalize how they are managed. Do not connect this if you have no interest in defining specific rules for successors or if your assets require no formal stewardship. The deciding factor is whether you need a structured roadmap for executors to follow.

Creative Archive Legacy Plan Tools

These tools help your agent build a formal management framework for your creative estate and physical assets.

#	TOOL	DESCRIPTION
01	create_access_instructions	Use this to define exactly how authorized individuals can interact with your creative works.
02	draft_documentation_actions	This tool generates a list of the non-digital steps you need to take to preserve your physical legacy.
03	generate_review_agenda	This tool prepares a structured meeting guide for your executors and successors to follow.
04	generate_stewardship_plan	This tool creates a management strategy for your entire creative estate.
05	map_future_decision_points	This tool identifies specific moments in the future when your estate will need to make major choices.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Help me create a stewardship plan for my art collection.

I have generated a stewardship strategy that prioritizes active curation while maintaining strict privacy for unreleased sketches.

U How can I prepare for my next legacy review meeting?

I have prepared a structured agenda including discussion topics for verifying access permissions and a list of required attendees.

U What are the next steps for organizing my physical records?

The recommended actions include labeling existing physical files and updating the central registry to align with your stewardship philosophy.

Frequently Asked Questions

01 What can this MCP do for my creative estate?

It provides tools to create stewardship plans, define access for successors, and map out future decision points for your work.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

03 How does it help with physical items?

The `draft_documentation_actions` tool creates a list of non-digital steps needed to preserve your physical legacy.

04 Can I use this to manage my heirs' access?

Yes, the `create_access_instructions` tool lets you define how authorized individuals interact with your works.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect.

06 How do I create a management strategy for my work?

You can use the `generate_stewardship_plan` tool to synthesize your stewardship preferences, privacy boundaries, and display intentions into a cohesive strategy.`

07 Can I define who has access to my creative assets?

Yes, the ``create_access_instructions` tool allows you to define authorization rules and a contact directory for your designated succession contacts.`

08 Does this tool handle digital file storage?

No, the ``draft_documentation_actions` tool focuses on non-digital organizational steps like cataloging and physical preservation needs.`
