Creative Exhibition Submission Plan MCP

Turn exhibition calls into organized, actionable submission plans.

Creative Exhibition Submission Plan MCP helps artists handle the logistical heavy lifting of gallery and museum submissions. It connects your AI client to specialized tools that check if your work fits a specific call, builds your submission timeline, and helps you avoid signing away your intellectual property rights.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Creative Exhibition Submission Plan MCP

4 tools available

Cloud-hosted on Vinkius

Submitting work to galleries or museums involves much more than just sending an image. You have to navigate technical requirements, strict deadlines, and complex legal terms. This MCP handles those details so you can focus on the art. You can use your agent to cross-reference your current portfolio against a specific exhibition's constraints to see if a submission even makes sense. Once you decide to move forward, the MCP builds a step-by-step roadmap to keep you on track for the deadline. It also helps you prepare the necessary files and documentation, ensuring you don't miss a single requirement. Most importantly, it acts as a second set of eyes on the fine print, helping you verify that you aren't signing away your rights in a way that hurts your career later.

Core Capabilities

01 — Eligibility Checking

Your agent compares your work against the hard constraints of an exhibition call.

02 — Asset Management

The MCP generates a list of required files and physical materials for your submission.

03 — Legal Review

Your agent analyzes submission terms to protect your intellectual property.

04 — Deadline Tracking

The MCP builds a chronological roadmap to ensure you meet every submission milestone.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/creative-exhibition-submission-plan — connect your AI agent in three steps.

- 01 Connect your AI client to the MCP via Vinkius.
- 02 Provide your agent with the details of the exhibition call and your artwork.
- 03 Run tools to check eligibility and generate checklists or roadmaps.
- 04 Use the output to execute your submission plan.

Connect your preferred AI client to Vinkius to access these tools instantly.

Built For

This MCP is built for professional artists and curators who need to manage multiple exhibition opportunities without losing track of the details.

Fine Artists

Use the MCP to verify if specific works fit gallery calls and to manage submission timelines.

Curators

Use the tool to organize submission requirements and asset checklists for artists.

Art Managers

Use the roadmap and legal verification tools to oversee the logistics of artist submissions.

What Changes When You Connect

- 01 Reduces the risk of disqualification by checking technical requirements early.
- 02 Prevents missed deadlines through automated chronological roadmaps.

Real-World Applications

Gallery Call Evaluation

Check if a new sculpture or painting fits the specific medium or theme requirements of a museum call.

Submission Planning

Build a complete timeline of tasks from file preparation to final shipping for a major exhibition.

Rights Protection

Review the legal implications of an exhibition contract before you sign it.

Material Preparation

Generate a list of every digital and physical asset needed to complete a professional application.

Patterns to Avoid

Blindly signing gallery contracts

❌ AVOID

You sign a museum's submission agreement immediately because you want the exposure, ignoring the fine print about image rights.

✓ INSTEAD

Run the contract through `verify_rights_and_permissions` first to ensure you aren't signing away your intellectual property.

Guessing if work fits a call

❌ AVOID

You spend hours prepping a massive sculpture for a show that only accepts small-scale paintings.

✓ INSTEAD

Use `evaluate_submission_eligibility` to check your work against the specific technical and thematic rules before you start prepping.

Missing deadline milestones

❌ AVOID

You realize two days before the deadline that you haven't even finished the required high-res digital scans.

✓ INSTEAD

Use `create_submission_roadmap` to build a chronological timeline that accounts for every task and communication step.

The Right Fit

Professional artists and curators managing multiple exhibition cycles should connect this MCP. Solo hobbyists with no intention of professional gallery representation will find it unnecessary. The decision rests on whether you need to manage complex technical requirements and legal terms for high-stakes submissions.

Creative Exhibition Submission Tools

These tools handle the technical, logistical, and legal heavy lifting required to move an artwork from the studio to a gallery floor.

#	TOOL	DESCRIPTION
01	generate_asset_checklist	This tool identifies every file, physical material, or document you need to have ready for a submission.
02	create_submission_roadmap	This tool builds a chronological timeline of tasks and communication steps to hit your deadlines.
03	evaluate_submission_eligibility	This tool checks if your artwork meets the specific technical and thematic rules of an exhibition call.
04	verify_rights_and_permissions	This tool reviews the legal language of a submission to help you protect your intellectual property.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Should I submit my 'Neon Dreams' sculpture to the upcoming City Gallery call?

The City Gallery requirements match your sculpture's medium, but you'll need to prepare a technical rider for the installation.

U What do I need to prepare for the Museum of Modern Art submission?

You need high-resolution 300dpi digital images, a signed artist statement, and a detailed CV.

U Create a timeline for my submission due on December 1st.

To hit the December 1st deadline, finish your asset checklist by November 15th and complete all shipping logistics by November 25th.

Frequently Asked Questions

01 How does this MCP help with artist submissions?

It provides tools to check eligibility, create asset checklists, build timelines, and review legal rights for exhibition calls.

02 Can I use this with Claude or Cursor?

Yes, you can use this MCP with any MCP-compatible client like Claude, Cursor, or Windsurf once you connect it through Vinkius.

03 Does this tool check legal documents?

Yes, the `verify_rights_and_permissions` tool analyzes the legal implications of a submission to help protect your rights.

04 How do I stay on schedule for deadlines?

You can use the `create_submission_roadmap` tool to build a chronological timeline of all necessary tasks.

05 Will it tell me what files I need?

Yes, the `generate_asset_checklist` tool identifies the specific files, materials, and documentation required for your submission.

06 How does the tool evaluate if my work is suitable?

The `evaluate_submission_eligibility` tool compares your candidate works against the specific themes, technical constraints, and deadlines provided in the exhibition call.

07 Can I use this to prepare my technical files?

Yes, you can use `'generate_asset_checklist'` to identify exactly which high-resolution images, documentation, or physical assets are required for a specific call.

08 Does this help with legal concerns?

Yes, the `'verify_rights_and_permissions'` tool analyzes the legal terms of an exhibition call to ensure they align with your intellectual property preferences.
