MCP SERVER | NO CODE | CLOUD HOSTED

Creative Publication Partnership Planner MCP

Manage rights, workflows, and asset handoffs without the manual overhead.

Creative Publication Partnership Planner MCP handles the heavy lifting of managing creative rights and publication logistics. It lets your AI client evaluate if a partnership fits your requirements, builds out editorial roadmaps, and maps out every necessary sign-off point. You can use it to organize technical asset transfers and set up post-publication follow-up schedules to ensure you never miss an attribution requirement.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256	Ed25519	24h TTL	V8 Isolate
Encryption at rest	PKI vault signatures	Ephemeral session keys	Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

MCP ENDPOINT

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Creative Publication Partnership Planner MCP

5 tools available
Cloud-hosted on Vinkius

You can use this MCP to navigate the messy details of creative publishing. Instead of juggling spreadsheets to track rights and approval steps, you let your AI client handle the logic. It looks at the specific terms of a publication offer and compares them against your own rules for rights and distribution. Once you decide to move forward, the MCP builds the actual roadmap for the project. It identifies exactly when a project needs to stop for a formal sign-off and organizes how technical assets move from your hands to the publisher. It also keeps track of what happens after the work goes live, making sure you follow up on all necessary requirements. It turns complex legal and logistical constraints into a structured plan your agent can follow.

Core Capabilities

01 — Rights Evaluation

Your agent uses this to check if a publisher's terms match your distribution needs.

02 — Workflow Mapping

Your agent builds detailed communication and production roadmaps.

03 — Checkpoint Identification

Your agent flags specific moments where formal approval is required.

04 — Logistics Planning

Your agent organizes the technical transfer of files and assets.

05 — Post-Publication Tracking

Your agent schedules follow-up tasks to ensure rights and attribution are handled.

One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/creative-publication-partnership-planner** — connect your AI agent in three steps.

01 Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.

02 Provide the partnership terms or project details to your AI client.

03 Ask the agent to analyze viability or build a workflow.

04 Review the generated roadmaps, checkpoints, or schedules.

05 Execute the plan using the structured data provided by the agent.

You connect the MCP to your preferred AI client and start managing partnerships through natural language.

Built For

This MCP is built for professionals managing the intersection of creative work and legal rights. It helps users move from a verbal agreement to a structured execution plan.

Creative Directors

They use the MCP to manage approval checkpoints and editorial timelines.

Publishing Managers

They use the MCP to evaluate partnership viability and plan asset handoffs.

Rights Managers

They use the MCP to track attribution requirements and post-publication follow-ups.

What Changes When You Connect

01 Reduces errors in rights management by checking terms against user preferences.

02	Automates the creation of editorial roadmaps and communication plans.
03	Prevents project delays by identifying necessary sign-off points early.
04	Ensures technical assets are transferred according to a set plan.

Real-World Applications

Evaluating New Deals

Check if a new magazine or platform offer violates your existing distribution rights.

Managing Editorial Timelines

Build a complete roadmap for a submission, from initial contact to final sign-off.

Coordinating Asset Delivery

Plan the technical handoff of high-resolution files to a partner.

Post-Launch Compliance

Schedule follow-up actions to ensure all attribution and rights requirements are met after publication.

Patterns to Avoid

Ignoring Rights Constraints

AVOID

You accept a magazine's offer immediately because the payout looks good, without checking if you still own the distribution rights.

✓ INSTEAD

Run the terms through analyze_partnership_viability first to see if the deal actually fits your existing rights profile.

Missing Critical Sign-offs

AVOID

A project moves straight from production to the publisher, skipping the necessary legal review step.

✓ INSTEAD

Use map_approval_checkpoints to identify exactly where your team needs to pause for formal approval before proceeding.

Disorganized Asset Delivery

AVOID

You send high-resolution files via a random email thread without a structured plan for the technical handoff.

✓ INSTEAD

Organize the entire transfer process using plan_asset_handoff to ensure the publisher gets exactly what they need.

The Right Fit

Connect this MCP if you manage creative rights or editorial timelines and need to turn verbal agreements into actionable plans. Do not connect it if you only handle simple, one-off freelance gigs without complex distribution requirements. The deciding factor is whether your publication deals involve multi-step approvals and technical asset transfers.

5 Tools for Managing Creative Publication Workflows

These tools handle everything from initial deal evaluation to post-publication compliance and asset logistics.

#	TOOL	DESCRIPTION
01	`create_followup_schedule`	This tool manages the post-publication phase. It defines the actions you need to take after the work is officially published.
02	`map_approval_checkpoints`	This tool finds the critical moments in a project. It identifies exactly where you need to stop for formal sign-offs.
03	`plan_asset_handoff`	This tool handles the logistics of moving work. It organizes the technical transfer of creative assets to the partner.
04	`analyze_partnership_viability`	This tool checks if a partnership actually works for you. It weighs the offered rights and approval terms against your specific preferences.
05	`generate_editorial_workflow`	This tool builds a step-by-step roadmap. It outlines how you will communicate with the publisher throughout the project.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Should I accept this publication offer given these terms?

The partnership is not recommended because the requested reproduction rights conflict with your primary requirement for exclusive distribution.

U Create a communication plan for my upcoming magazine submission.

The editorial workflow includes initial submission, a review period of 14 days, and a final sign-off by the editor-in-chief before the October 1st deadline.

U What are the mandatory sign-off points for this project?

The required checkpoints are: 1. Initial Concept Approval by the Creative Director, and 2. Final Proof Review by the Legal Department.

Frequently Asked Questions

01 **What AI clients can I use with this MCP?**

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

02 **How does the MCP help with rights management?**

The MCP uses the analyze_partnership_viability tool to weigh a publisher's requested rights against your specific preferences to see if a deal is a good fit.

03 **Can this MCP help me track project approvals?**

Yes, the map_approval_checkpoints tool identifies the specific moments in a project where you must stop for formal sign-off.

04 **Do I need to host the MCP myself?**

No, Vinkius hosts and manages the MCP for you. You just connect your client and start using the tools.

05 **Can I use this to plan technical file transfers?**

Yes, the plan_asset_handoff tool is designed to organize the technical and logistical transfer of creative work.

06 **How does the tool handle conflicting rights and preferences?**

The `analyze_partnership_viability` tool follows a strict precedence rule where legal rights and mandatory approval conditions always override user opportunity preferences.

07 **Can I use this to manage my asset delivery?**

Yes, the `plan_asset_handoff` tool organizes the technical and logistical transfer of your creative work to specific contacts based on editorial requirements.

08 **What happens after my work is published?**

You can use `create_followup_schedule` to generate a list of actions, such as monitoring usage or ensuring attribution requirements are fulfilled.

Go Live in 60 Seconds

Get your connection token from **cloud.vinkius.com**, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

```
https://edge.vinkius.com/[TOKEN]/mcp
```

CLIENT	WHERE TO CONFIGURE
Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add `"creative-publication-partnership-planner": { "url": "…" }`
Windsurf	MCP Settings → `mcp_settings.json` → Add endpoint URL
ChatGPT	Settings → Tools & plugins → Add MCP server → Paste endpoint
Gemini	Extensions → Add MCP Server → Paste endpoint URL
