Creative Rights Clearance Plan MCP

Track asset permissions and automate your clearance workflows.

Creative Rights Clearance Plan MCP manages the permissions for your creative assets. It connects your AI client to workflows that identify missing rights, draft outreach to rights-holders, and maintain audit logs for compliance. You can use it to map out the exact steps needed to move assets from a hold status to being fully released.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Creative Rights Clearance Plan MCP

4 tools available

Cloud-hosted on Vinkius

You can use this MCP to handle the messy details of creative asset permissions. Instead of manually checking if you have the rights to use a specific track or image, your AI client can evaluate your current permissions against your intended use. It identifies exactly where your coverage falls short, such as missing territory rights or expired licenses.

Once a gap is found, the MCP helps you bridge it. You can have your agent draft specific outreach messages to rights-holders to request new permissions. It also keeps your records clean by logging how assets are used, which is essential for compliance audits. If an asset is currently on hold, the MCP determines the specific sequence of actions required to get it cleared. This moves your team from guessing about legal status to following a clear, actionable roadmap for every piece of media in your library.

Core Capabilities

01 — Permission Gap Analysis

Your agent checks if your current licenses cover your intended media usage.

02 — Automated Outreach Drafting

The MCP writes specific permission request messages for rights-holders.

03 — Compliance Logging

Your AI client records asset usage to build an audit trail.

04 — Release Path Mapping

The tool calculates the sequence of steps needed to clear assets on hold.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/creative-rights-clearance-plan — connect your AI agent in three steps.

- 01 Connect your AI client to the Vinkius hosted MCP.
- 02 Provide your asset permission data to your agent.
- 03 Run a clearance plan to find missing rights.
- 04 Use the generated outreach templates to contact rights-holders.
- 05 Record usage to maintain your compliance logs.

Get your clearance workflow running in minutes by connecting your preferred client to Vinkius.

Built For

This MCP is built for creative professionals and legal teams managing large media libraries.

Rights Managers

They use the MCP to track permission gaps and manage outreach to owners.

Legal Compliance Officers

They rely on the tool to maintain audit logs and verify asset usage.

Creative Producers

They use the clearance plans to see which assets are ready for production.

What Changes When You Connect

- 01 Identifies missing territory or usage rights automatically.
- 02 Reduces manual drafting time for rights-holder communications.

-
- 03** Provides a clear sequence of actions to resolve asset holds.
-
- 04** Maintains a formal audit log of asset utilization.
-

Real-World Applications

Global Campaign Readiness

Check if your existing image licenses cover the specific countries in your upcoming social media rollout.

Music Clearance

Draft permission requests for music tracks used in video advertisements.

Audit Preparation

Generate usage logs to prove compliance with copyright permissions during an audit.

Asset Release Management

Determine the exact steps to move a video from a legal hold to a released status.

Patterns to Avoid

Manual permission tracking

❌ AVOID

You try to manually cross-reference every image license against a new campaign spreadsheet to see if you're covered.

✓ INSTEAD

Use `generate\_clearance\_plan` to automatically compare your current permissions against your intended media usage.

Generic rights outreach

❌ AVOID

You send a standard, vague email to a music label asking for permission without specifying the exact usage terms.

✓ INSTEAD

Use `create\_outreach\_templates` to draft specific, customized messages for rights-holders.

Ignoring asset holds

❌ AVOID

A production lead sees a legal hold on a video and waits for a manual email from the legal department to proceed.

✓ INSTEAD

Run ``get_approval_sequence`` to see the exact steps required to move that asset from a hold to a released status.

The Right Fit

Connect this MCP if your team manages large media libraries and needs to verify usage rights before production. Do not connect it if you only handle single, one-off assets with simple licenses. The decision depends on whether you need a repeatable roadmap to clear assets and maintain audit logs.

Creative Rights Clearance Plan 4 Tools

These tools manage the lifecycle of media permissions, from identifying coverage gaps to drafting outreach and logging usage for audits.

#	TOOL	DESCRIPTION
01	create_outreach_templates	This tool drafts customized messages for contacting rights-holders. It helps your agent request specific permissions for music, images, or video assets.
02	record_asset_usage	This tool creates formal audit logs for your assets. It tracks how media is being used to ensure you stay compliant with existing licenses.
03	generate_clearance_plan	This tool compares your existing permissions against your planned usage. It produces a roadmap showing what rights you still need to acquire.
04	get_approval_sequence	This tool identifies the necessary order of operations to clear an asset. It shows the path to move an item from a hold status to a released status.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Evaluate my current assets and tell me what is missing for a social media campaign.

The clearance plan identifies that Asset ID 'IMG_001' has only Tier 2 (Restricted) clearance, which covers digital use but lacks the specific territory rights required for your global social media campaign. A release hold is active for this asset.

U Generate a message to contact the rights-holder for the music track in our video.

Subject: Permission Request for Music Asset. Dear Rights-Holder, we are requesting permission to use your musical work for a digital advertisement on YouTube and Instagram. We will provide attribution as follows: [Attribution Preference].

U What is the next step to release the assets currently on hold?

The critical path requires first securing the Tier 4 (No Clearance) status for Asset 'VID_99' via the outreach template, followed by verifying the Tier 2 permissions for Asset 'IMG_42'.

Frequently Asked Questions

01 What does this MCP do?

This MCP manages creative asset permissions. It helps you identify missing rights, draft outreach to owners, and track asset usage for compliance.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

03 How does it help with asset holds?

The MCP uses a tool to determine the specific sequence of operations required to move an asset from a hold status to a released status.

04 Can it help with copyright compliance?

Yes, it includes a tool to record asset usage, which creates a formal audit log for your compliance needs.

05 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and start working.

06 How do I identify assets that are missing permissions?

You can use the `generate\_clearance\_plan` tool. It evaluates your assets against existing permissions and flags any assets with unknown or partial authorization.

07 Can I automate the contact process for rights-holders?

Yes, the `create\_outreach\_templates` tool generates customized communication drafts specifically designed for contacting rights-holders based on your intended use.

08 How can I ensure my asset usage is compliant?

Use the `record\_asset\_usage` tool to create a formal audit log. This helps verify that the specific instance of use stays within the boundaries of your existing permissions.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
