Creator Account Legacy Brief MCP

Secure your digital footprint and content continuity.

Creator Account Legacy Brief MCP helps you organize the digital chaos of a content creator's life. It gives your AI client a clear map of every platform, storage location, and legal contact needed to manage a digital estate. Instead of hunting for passwords or file locations during a transition, your agent uses this MCP to pull exact inventories and publishing instructions instantly.

A+ Quality Score 100/100

automation

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Creator Account Legacy Brief MCP

4 tools available

Cloud-hosted on Vinkius

Managing a digital legacy is messy. When a creator's ecosystem spans dozens of platforms, cloud drives, and legal stakeholders, things get lost. This MCP gives your AI client the ability to act as a digital estate manager. It provides a structured way to track where every piece of media lives and who has the authority to move it.

You can use it to build a complete map of a creator's digital footprint. Your agent can identify every active platform, locate specific video or image files across different storage services, and pinpoint exactly which collaborators or legal representatives hold authority. Most importantly, it holds the specific instructions for what happens to content during a transition. Whether you are preparing for long-term archiving or managing a sudden change in leadership, this MCP ensures your AI agent has the data it needs to execute those plans without guesswork.

Core Capabilities

01 — Ecosystem Mapping

Your agent identifies all active digital platforms used by the creator.

02 — Asset Tracking

The AI finds specific media and data across various storage locations.

03 — Stakeholder Identification

Your agent resolves the connections between creators and their legal contacts.

04 — Instruction Execution

The AI retrieves specific publishing and archiving mandates for transition events.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/creator-account-legacy-brief — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Select the Creator Account Legacy Brief MCP from the catalog.
- 03 Ask your AI agent to map the creator's platforms or find specific assets.
- 04 The agent uses the tools to pull real-time data from the creator's ecosystem.

Get your digital estate data ready in minutes.

Built For

This MCP is built for professionals managing the digital footprints of high-value content creators.

Digital Estate Planners

Use the agent to organize asset locations and legal contacts for long-term planning.

Talent Managers

Hand off the task of auditing platform inventories and collaborator lists to your AI.

Legal Professionals

Use the tool to verify publishing mandates and authorized contacts for a creator's estate.

What Changes When You Connect

- 01 Reduces manual searching for file locations and platform logins.
- 02 Centralizes collaborator and legal contact data for quick access.
- 03 Provides clear instructions for content handling during transitions.

04 Creates a structured map of a creator's entire digital footprint.

Real-World Applications

Estate Transition

An agent uses the publishing plans to execute content archiving when a creator retires.

Asset Auditing

A manager uses the tool to find where all historical video files are stored.

Legal Verification

A lawyer checks the collaborator matrix to see who has authorized access to accounts.

Platform Management

A team uses the inventory tool to ensure no social media accounts are forgotten.

Patterns to Avoid

Manual asset hunting

❌ AVOID

You spend hours clicking through different cloud drives and social media settings to find where a specific video is stored.

✓ INSTEAD

Let your agent find the exact storage path immediately using ``list_content_locations``.

Guessing legal authority

❌ AVOID

A manager assumes a specific team member has the right to move content during a transition without checking the official records.

✓ INSTEAD

Verify the exact relationship between the creator and their legal contacts with ``resolve_collaborator_matrix``.

Ignoring transition mandates

❌ AVOID

An estate planner starts archiving files without knowing the specific publishing rules set by the creator.

✓ INSTEAD

Pull the exact instructions for content handling by using ``audit_publishing_and_archive_plans``.

The Right Fit

Connect this MCP if you manage high-value digital estates or talent with complex platform footprints. Do not connect it if you only manage a single, simple social media account. The decision depends on whether you need to track legal authority and asset locations across multiple disconnected platforms.

Creator Account Legacy Brief: 4 Essential Tools

These tools map a creator's digital footprint and manage the transition of assets and legal authority.

#	TOOL	DESCRIPTION
01	resolve_collaborator_matrix	This tool maps the relationships between the creator, their team, and their legal or professional contacts.
02	list_content_locations	Use this to find exactly where media assets and historical data are stored across the ecosystem.
03	audit_publishing_and_archive_plans	This tool pulls the specific instructions for content handling during a transition event.
04	get_platform_inventory	This tool identifies every digital platform currently in the creator's ecosystem.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all digital platforms for creator ID 'user_123'.

The platforms associated with creator 'user_123' are YouTube (Primary Hub), Instagram (Distribution Channel), and Gmail (Utility/Admin).

U Where are the video files for 'creator_99' stored?

Videos for 'creator_99' are stored in Cloud-based storage on YouTube and Local-hard-drive storage.

U Who are the authorized contacts for 'creator_456'?

The authorized contacts for 'creator_456' include Jane Doe (Legal Representative) and John Smith (Successor).

Frequently Asked Questions

01 What can this MCP do for a content creator?

It helps manage digital continuity by mapping platforms, locating media assets, and identifying authorized legal contacts.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

03 How does it help with estate planning?

It provides the specific instructions and asset locations needed to manage a digital legacy during a transition.

04 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect.

05 Can it find where my videos are stored?

Yes, the `list_content_locations` tool specifically finds where media assets and historical data live.

06 How can I see all platforms used by a creator?

You can use the `'get_platform_inventory'` tool by providing the unique `'creatorId'` to retrieve a list of all associated platforms.

07 Can I find where specific videos are stored?

Yes, use the `'list_content_locations'` tool. You can optionally filter by `'contentCategory'` such as 'video' to find specific storage types.

08 How do I know what to do with content after a transition?

Use the `'audit_publishing_and_archive_plans'` tool. You must specify if you are auditing `'publishing_mandates'` or `'archive_preferences'`.
