Date Night Budget Planner MCP

Build complete itineraries that actually fit your budget.

Date Night Budget Planner MCP handles the logistics of planning a night out. It balances activities, dining, transport, and even childcare costs to ensure your plans are realistic and stay within your spending limit. Your AI client uses this to build cohesive schedules that won't break the bank.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Date Night Budget Planner MCP

4 tools available

Cloud-hosted on Vinkius

Planning a night out usually involves a dozen different tabs and constant math to see if you can actually afford that dinner plus a sitter. This MCP changes that by acting as a decision engine for your evening. You give your agent your budget and preferences, and it handles the heavy lifting of checking if your ideas are mathematically possible. It looks at the timing between activities, the cost of meals, and the necessity of transportation or childcare to build a single, logical plan. Instead of guessing if you have enough left over for dessert, you get a validated itinerary where every component fits. You can browse specific categories like outdoor or cultural activities to find inspiration, or just tell your agent to find something that works with the money you have on hand. It keeps the logistics in check so you can focus on the actual date.

Core Capabilities

01 — Budget Validation

Your agent checks if your planned activities and meals stay under your spending limit.

02 — Itinerary Scheduling

The MCP calculates the specific timing for each part of your evening.

03 — Activity Discovery

You can ask your agent to find specific types of activities like outdoor or cultural options.

04 — Logistics Integration

The tool accounts for extra costs like childcare or transportation in the total plan.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/date-night-budget-planner — connect your AI agent in three steps.

- 01 Connect your AI client to the Vinkius hosted MCP.
- 02 Tell your agent your budget and what kind of night you want.
- 03 The agent uses the MCP to check costs and find activities.
- 04 The agent generates a validated, timed itinerary for you to follow.

Connect the MCP to your AI client and start planning immediately.

Built For

This is for anyone who wants to plan a night out without the stress of manual math or scheduling conflicts.

Busy Parents

They hand off the task of balancing childcare costs with activity budgets to the agent.

Budget-Conscious Couples

They use the tool to ensure their evening plans never exceed their set spending limit.

Event Planners

They use the timing and feasibility tools to structure small-scale social outings.

What Changes When You Connect

- 01 Eliminates math errors by validating budget feasibility before you commit.
- 02 Prevents scheduling conflicts by calculating specific start and end times.

-
- | | |
|----|---|
| 03 | Includes hidden costs like childcare in the total budget calculation. |
| 04 | Provides structured activity options based on specific categories. |
-

Real-World Applications

Low-Budget Outings

Use the tool to find affordable dinner and activity combinations when you have a strict limit.

Parental Date Nights

Incorporate childcare costs into your plan to see if a night out is financially viable.

Themed Evenings

Find specific types of activities, such as cultural or outdoor options, to match a specific mood.

Time-Sensitive Planning

Ensure your sequence of events fits within a specific window of time.

Patterns to Avoid

Ignoring hidden logistical costs

❌ AVOID

You plan a fancy dinner and a movie but forget to account for the sitter or the Uber ride home.

✓ INSTEAD

Include all costs in your initial request so the MCP can account for them. Use `check_budget_feasibility` to see if the total, including childcare, actually fits your limit.

Overlooking time gaps

❌ AVOID

You book a 6:00 PM dinner and an 8:00 PM show, but realize too late that travel time makes the show impossible to catch.

✓ INSTEAD

Let the agent handle the clock. Use `calculate_itinerary_timing` to ensure your sequence of events actually works in real time.

Vague activity requests

❌ AVOID

You tell your agent to find something fun without giving any direction on the vibe or budget.

✓ INSTEAD

Be specific about what you want. Use `get_activity_options` to browse specific categories like outdoor or cultural activities that match your mood.

The Right Fit

Connect this MCP if you want to stop guessing whether you can afford a night out. If you prefer manually calculating every expense and timing every transition yourself, you don't need this. The deciding factor is whether you want a validated itinerary or just a list of ideas.

Date Night Budget Planner Tools

These tools handle the math and logistics of your evening. They turn a list of ideas into a validated, timed itinerary.

#	TOOL	DESCRIPTION
01	calculate_itinerary_timing	This tool determines the exact start and end times for your sequence of events. It ensures your dinner reservation doesn't clash with your activity.
02	check_budget_feasibility	This tool runs the math on your planned components. It tells you if your combination of activities and meals is actually possible within your limit.
03	generate_date_plan	This tool builds a complete, validated itinerary. It takes your preferences and budget to produce a full schedule of events.
04	get_activity_options	This tool lets you browse specific categories of things to do. You can ask for outdoor, cultural, or other specific types of activities.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Plan an outdoor date night for two with a \$100 limit, including childcare, starting at 6 PM.

Your date night is set. You'll enjoy a walk in the botanical gardens, followed by a quick-bite meal at a local cafe. Total cost is \$85, including \$30 for childcare. You will start at 6:00 PM and finish by 8:30 PM.

U Can I afford a fine-dining date with a \$50 budget?

No, a fine-dining experience typically starts at a higher price point. I recommend trying a quick-bite or sit-down meal to stay within your \$50 limit.

U What kind of cultural activities are available?

Available cultural activities include a visit to the local art museum and a guided historical walking tour.

Frequently Asked Questions

01 How does this MCP help with budgeting?

It uses a feasibility tool to check if your chosen activities, meals, and extra costs like childcare stay within your specific limit.

02 Can I plan for specific types of dates?

Yes, you can ask for specific categories like outdoor or cultural activities to find options that fit your mood.

03 Does it handle the timing of the evening?

Yes, the MCP calculates the start and end times for each event in your itinerary to ensure everything flows logically.

04 What AI clients can I use this with?

You can use this MCP with any compatible client, including Claude, Cursor, Windsurf, and VS Code.

05 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use as soon as you connect your client.

06 How does the budget calculation work?

The total cost is the sum of the selected activity, meal, transport, and any required childcare. The ``generate_date_plan`` tool ensures the total never exceeds your specified limit.

07 Can I plan a date that includes childcare?

Yes. When using ``generate_date_plan``, simply set the ``needsChildcare`` parameter to true, and the tool will include the necessary childcare costs in the total budget.

08 What if no plan fits my budget?

If no combination of activities and meals fits your constraints, the tool will return an error. You can use ``check_budget_feasibility`` to see if your requested types are even possible with your current limit.
