

MCP SERVER

NO CODE

CLOUD HOSTED

Demio MCP for AI Agents

Manage webinar registrations and track attendance metrics.

Demio equips your AI agent to handle complex webinar logistics. It lets you list, search, and get detailed reports on past and future events. You can track who signed up for any session, check live attendance numbers, or even register a new person directly through chat conversation.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Demio MCP

10 tools available

Cloud-hosted on Vinkius

Managing webinars used to mean jumping between the platform dashboard, a spreadsheet of attendees, and an email client just to answer one basic question about a specific event. Demio brings all that data into your AI workflow. Your agent connects to this MCP, allowing you to manage entire webinar cycles—from identifying upcoming dates to tracking every attendee's performance metrics.

You can list all your events and retrieve detailed settings for any of them. Need to know who signed up? Your agent searches the complete roster of registrants. You can monitor scheduled sessions to get specific details on attendees or pull full reports showing attendance rates. If you need a last-minute addition, your agent registers new users right in the chat. Because this MCP is hosted on Vinkius, it lets your AI client access Demio and all its capabilities, making webinar marketing strategy an intuitive conversation instead of a tedious dashboard deep dive.

Core Capabilities

01 — List and search for events

Retrieve detailed information about all past and future webinars in your account.

03 — Monitor live and scheduled sessions

Get specific details about an ongoing session, including a list of current attendees.

05 — Manage user participation

Register new users to specific sessions without having to log into the platform manually.

02 — Track webinar performance reports

Pull attendance metrics, performance data, and comprehensive reports for completed sessions.

04 — Identify and search registrants

List everyone who signed up for a particular webinar event or narrow the list down by criteria.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/demio — connect your AI agent in three steps.

- 01 Connect Demio's MCP using your AI client and authorize it with your API Key and Secret.
- 02 Your agent uses natural language prompts, telling it exactly what data you need—for example, 'Show me the attendance report for Q3.'
- 03 The system runs the appropriate tool calls, pulls the live data from Demio, and presents the clean, summarized information directly in your chat interface.

The bottom line is that instead of knowing which dashboard to click into, you just tell your agent what information you need about your webinars, and it handles the rest.

Built For

Marketing managers who are sick of cross-referencing spreadsheets with platform dashboards. Event coordinators needing real-time roster management during a crisis. Sales teams that rely on webinar attendance data to qualify leads.

Event Coordinator

Managing event lists and registering participants via chat instantly, rather than manually updating forms.

Marketing Manager

Quickly checking registration numbers or retrieving performance reports on the go to adjust campaign spend.

Customer Success Specialist

Accessing specific registrant info and session status during customer meetings without logging into a separate CRM.

What Changes When You Connect

- 01 Track performance with `get_webinar_report` : Stop guessing about event success. Pull full reports instantly to see actual attendance rates, not just sign-ups.

-
- 02** Keep your roster clean using `list_webinar_registrants` : Never manually check spreadsheets again. Get a definitive list of every person signed up for an event directly in the chat.
-
- 03** Manage events with `list_upcoming_webinars` and `list_webinar_events` : See everything at once. You can get a full overview of your entire webinar catalog without jumping through multiple menus.
-
- 04** Update attendance using `register_user_for_webinar` : Need to add someone last minute? Your agent handles the registration instantly, saving you time during peak event times.
-
- 05** Get real-time session data via `get_session_details` : During a live webinar, immediately check who is present. Knowing current attendance helps you adjust your talking points on the fly.
-

Real-World Applications

I need to know how many people attended my last product demo.

A marketing manager asks their agent, 'What was the final count and overall attendance rate for the Q2 Product Demo?' The agent uses `get_webinar_report` to instantly provide metrics like 130 attendees out of 150 registrants.

We have an urgent registration need during a conference.

An event coordinator types, 'Add Jane Doe to the Product Demo session.' The agent uses `register_user_for_webinar`, confirming her spot immediately without needing platform access.

A client needs access to a past webinar recording.

The customer success team member asks, 'Show me the details and roster for the 'Client Onboarding Workshop' from last month.' The agent uses `list_webinar_events` followed by `get_webinar_details` to pull up the necessary context.

I want to build a list of all leads from next month's webinars.

The manager asks, 'List everyone signed up for any webinar happening in October.' The agent runs `list_upcoming_webinars` and then uses `list_webinar_registrants` on each one, compiling a master list.

Patterns to Avoid

Using the wrong report tool

✗ AVOID

Trying to find live attendee counts by calling the general webinar settings. This only gives static details and misses current participants.

✓ INSTEAD

To check who's in a session right now, use ``get_session_details``. For past performance data, always run ``get_webinar_report``.

Manually listing every event

✗ AVOID

Asking the agent to search for a webinar by name repeatedly. This is slow and requires multiple tool calls just to list what's available.

✓ INSTEAD

To get a complete, comprehensive view of all events at once, start by using ``list_webinar_events``.

Mixing up status checks

✗ AVOID

Confusing the main event details with live session data. You might accidentally pull general setup info when you really needed to know who was logged in.

✓ INSTEAD

If you need current attendee lists, use ``get_session_details``. If you just need to check the basic setup of the whole webinar, stick to ``get_webinar_details``.

The Right Fit

Use this MCP if your core pain point is managing the lifecycle of multiple webinars: tracking registrations, monitoring live attendance, and compiling post-event performance reports. It excels at cross-referencing data points like linking a general event to its specific roster or its final report metrics. Don't use it if you need deep CRM functionality, like automatically updating sales stages based on attendance. For complex lead scoring that involves external data sources (like LinkedIn or HubSpot), you'll need a different integration type, but for pure webinar logistics and tracking, this MCP is the industry standard tool.

Demio MCP: Simplifying Webinar Registration Tracking

Today, tracking registrations means logging into Demio to see a raw sign-up list, then exporting that data into a spreadsheet. You have to manually compare those names against your CRM records and figure out who was actually present or who signed up but never showed.

With this MCP, your agent handles the complexity. Simply asking 'Who registered for Product Demo?' pulls the clean roster directly from Demio's database, allowing you to get a definitive list of every sign-up without leaving your chat window.

Demio MCP: Accessing Detailed Webinar Performance Metrics

Before connecting this MCP, pulling post-event metrics meant waiting for the platform's internal reports to generate. You were limited to what Demio decided to show you in its native dashboard.

Now, your agent pulls full performance metrics and attendance rates instantly using `get_webinar_report`. This means you get the data faster, letting you adjust marketing spend or follow-up emails within minutes of the session ending.

Demio: 10 Tools for Webinar Event Management

Use these tools to list all your webinars, search registrants, pull detailed session metrics, and manage user enrollment directly via your AI agent.

#	TOOL	DESCRIPTION
01	<code>get_account_metadata</code>	Retrieves basic usage information and limits for your Demio account.
02	<code>get_webinar_details</code>	Pulls all the specific settings and core information for a single, defined webinar event.
03	<code>get_webinar_report</code>	Gathers performance metrics and detailed attendance reports after an event finishes.
04	<code>get_session_details</code>	Provides specific details for a webinar session, including who is currently attending.
05	<code>list_webinar_events</code>	Shows you every single upcoming and past webinar event stored in your Demio account.
06	<code>list_webinar_registrants</code>	Lists all people who have signed up for a specific, identified webinar.
07	<code>list_webinar_sessions</code>	Shows all scheduled sessions that exist under a larger webinar event.
08	<code>list_upcoming_webinars</code>	Identifies and lists all webinars that are scheduled to happen in the future.
09	<code>register_user_for_webinar</code>	Registers a new user for a specific webinar session using just chat commands.
10	<code>search_webinars_by_name</code>	Finds and retrieves webinars based on a keyword you provide, like the name of the event.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all my upcoming webinars.

Upcoming Webinars Overview

I found three scheduled events:

- Product Demo: New Features (Date: 10/15)
- Q3 Sales Strategy Summit (Date: 10/28)
- Client Onboarding Workshop (Date: 11/05)

Do you want me to check the current registration count for any of these?

U Who is registered for the Q3 Sales Strategy Summit?

Registrant Roster: Q3 Sales Strategy

Total Registered: 152 people.

Here are a few notable registrants:

- Jane Smith (jane@corp.com)
- Mark Johnson (markj@client.net)
- Emily Chen (emilyc@partners.org)

I can search for any specific person or export this list.

U Show me the report for my last webinar session.

Webinar Report: Marketing 101

- Total Registrants: 150
- Actual Attendees: 120 (80% attendance)
- Average Session Duration: 45 minutes

Overall, the turnout was strong. Would you like a list of attendees who stayed until the end?

Frequently Asked Questions

01 How can I use the Demio MCP to check my webinar attendance numbers?

Your agent pulls real-time performance metrics and detailed reports for any completed or scheduled event. You get accurate attendance counts, which is critical for measuring marketing success.

02 Can the Demio MCP help me find out who signed up for an old webinar?

Yes. The agent can search through all your historical data and list every person who registered for a specific event, even if it happened months ago. This is useful for follow-up campaigns.

03 Does Demio MCP help me add someone to a webinar roster?

Absolutely. You can tell your agent to register a new user for any session directly through chat, which saves you from having to log into the platform and manually enter their details.

04 How do I see all my scheduled webinars using Demio MCP?

The MCP lists every upcoming webinar in your account. You can use this list to check event settings or pull registration data for any one of them, giving you a full overview.
