Digital Legacy Document Plan MCP

Map your digital assets to the right people.

Digital Legacy Document Plan MCP acts as a planning engine for your digital transition. It maps technical assets like accounts, devices, and encrypted storage to specific contacts. Your AI client uses this to build a complete picture of your digital estate, identify documentation gaps, and set up a schedule to keep your information current.

A+ Quality Score 100/100

organization

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Digital Legacy Document Plan MCP

4 tools available

Cloud-hosted on Vinkius

Managing what happens to your digital life after you're gone is messy. This MCP solves that by providing a structured way to link your digital footprint to the people you trust. Instead of leaving scattered passwords or inaccessible devices, you use your AI client to build a cohesive map of accounts, hardware, and encrypted files.

You can check for holes in your planning to ensure no critical account is left orphaned. It helps you verify that every piece of hardware or sensitive storage has a designated contact ready to take over. Beyond just listing assets, it helps you stay organized by calculating exactly when you should sit down to review and update your plan. It turns a chaotic collection of logins and devices into a managed, actionable legacy record.

Core Capabilities

01 — Gap Analysis

Your agent identifies missing documentation for critical digital assets.

02 — Asset Mapping

Your AI client links specific accounts and devices to designated contacts.

03 — Readiness Summaries

Your agent generates a unified view of your entire digital estate.

04 — Maintenance Scheduling

Your AI client calculates future dates for plan reviews and updates.

05 — Contact Verification

Your agent checks that every asset has an appropriate person assigned to it.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/digital-legacy-document-plan — connect your AI agent in three steps.

- 01 Connect the MCP to your preferred client like Claude or Cursor via Vinkius.
- 02 Provide your asset and contact details to your AI agent.
- 03 Ask the agent to analyze your coverage or compile a plan.
- 04 Review the generated checklists and schedules to finalize your documentation.

Get your digital estate organized through a simple connection to your AI client.

Built For

This MCP is for anyone looking to organize their digital footprint for the future.

Estate Planners

Use the MCP to help clients organize technical assets alongside physical ones.

Security-Conscious Individuals

Manage the transition of encrypted storage and sensitive accounts.

Digital Organizers

Map complex device and account hierarchies to specific family members or executors.

What Changes When You Connect

- 01 Identifies missing links between assets and contacts.
- 02 Creates a structured timeline for regular plan updates.
- 03 Consolidates technical asset data into a single view.

- 04 Verifies that critical storage and accounts are not left unassigned.
-

Real-World Applications

Digital Estate Organization

Map your cloud storage, social media, and hardware to specific executors.

Security Audit

Find out which encrypted files currently lack a designated person to access them.

Annual Plan Updates

Use a generated schedule to ensure your digital records stay current every six months.

Completeness Checking

Run a check to see if you've missed any major categories of your digital life.

Patterns to Avoid

Manual spreadsheet tracking

❌ AVOID

You try to keep a running list of every password and device in a local Excel file. This gets outdated the moment you change a setting or buy a new phone.

✓ INSTEAD

Use ``analyze_asset_coverage`` to find exactly where your documentation is thin and keep everything in a managed structure.

Assuming contacts are assigned

❌ AVOID

You assume your spouse or executor knows how to access your encrypted cloud storage. You haven't actually verified the link between the account and the person.

✓ INSTEAD

Run ``validate_contact_assignment`` to confirm every critical asset is actually mapped to a specific person.

Setting and forgetting the plan

❌ AVOID

You build a digital map once and never look at it again. Years later, your executors find your plan is completely obsolete.

✓ INSTEAD

Use `generate\_review\_schedule` to create a recurring timeline so you stay on top of updates.

The Right Fit

Connect this MCP if you own significant digital assets, encrypted storage, or complex account hierarchies that need a clear handoff plan. Do not connect it if you only use a few basic web services with no sensitive data. The decision depends on whether you need a structured way to ensure your digital footprint doesn't become a headache for your survivors.

Digital Legacy Document Plan Toolset

These tools manage the mapping, verification, and scheduling of your digital estate. They turn scattered account data into a structured plan for your designated contacts.

#	TOOL	DESCRIPTION
01	analyze_asset_coverage	This tool checks if you've documented all your essential digital components. It identifies where your records are missing critical information.
02	compile_legacy_plan	This tool pulls all your data into one cohesive summary. It gives you a clear view of your current legacy readiness.
03	generate_review_schedule	This tool creates a timeline for your future updates. It tells you exactly when to revisit your plan to keep it accurate.
04	validate_contact_assignment	This tool verifies that your designated contacts are properly linked to your assets. It ensures the right people are mapped to the right accounts.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Can you check if my digital assets are sufficiently documented?

Your current completeness score is 75%. You have critical gaps in your encrypted storage assets which lack a designated contact.

U Generate a review schedule for my legacy plan with a 6-month interval.

Your next review is scheduled for June 15, 2024. Subsequent reviews are set for December 15, 2024, and June 15, 2025.

U Compile my full legacy plan with my current assets and contacts.

Your legacy plan is ready. It includes a completeness checklist showing 4 secured assets and 2 vulnerabilities, along with a review schedule for the next 12 months.

Frequently Asked Questions

01 What can this MCP do for my digital estate?

It maps your digital assets, like accounts and devices, to specific contacts and generates a structured plan for your digital legacy.

02 How do I know if my digital plan is complete?

You can ask your AI client to analyze your asset coverage, which will identify any critical gaps in your documentation.

03 Can I set up reminders to update my plan?

Yes, the MCP can generate a review schedule that provides specific dates for you to revisit and update your information.

04 Does this MCP work with Claude or Cursor?

Yes, you can connect this MCP to any compatible client including Claude, Cursor, and Windsurf.

05 How does it handle encrypted storage?

The MCP allows you to map encrypted storage to designated contacts so you can identify if any sensitive data lacks an assigned person.

06 How do I know if my digital estate is fully documented?

You can use the `analyze\_asset\_coverage` tool to receive a completeness score and identify any critical gaps in your asset documentation.

07 Can I schedule regular updates for my plan?

Yes, the `generate\_review\_schedule` tool calculates a timeline of future dates based on your preferred review interval.

08 What information is required to create a full legacy plan?

To use `compile\_legacy\_plan`, you need to provide your accounts, devices, encrypted storage, contacts, and document locations.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

`https://edge.vinkius.com/[TOKEN]/mcp`

CLIENT	WHERE TO CONFIGURE
 Claude AI	Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint
 Cursor	Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint
 VS Code	Ctrl/Cmd+Shift+P → "MCP: Add Server" → add <code>"digital-legacy-document-plan": { "url": "..." }</code>
 Windsurf	MCP Settings → <code>mcp_settings.json</code> → Add endpoint URL
 ChatGPT	Settings → Tools & plugins → Add MCP server → Paste endpoint
 Gemini	Extensions → Add MCP Server → Paste endpoint URL
