MCP SERVER | NO CODE | CLOUD HOSTED

# Digital Receipt Archive Plan MCP

## Keep your expense records organized and your warranties tracked.

Digital Receipt Archive Plan MCP lets your AI client manage your entire digital receipt history. It handles the heavy lifting of grouping receipts by merchant or category, spotting missing documentation, and flagging upcoming warranty or return deadlines so you never miss a window.

A+ Quality Score 100/100

# The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

# Your AI Connections Run Through Vinkius Cloud

The world's largest managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

> *The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.*
>
> — Architecture principle

## Four Pillars of the Vinkius Runtime

**01 — Security by design**

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

**02 — Built on MCP Fusion**

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

**03 — Deterministic observability**

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

**04 — Autonomous operations**

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

| AES-256 | Ed25519 | 24h TTL | V8 Isolate |
|---|---|---|---|
| Encryption at rest | PKI vault signatures | Ephemeral session keys | Sandboxed execution |

## One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

## Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

**01 — Ed25519 PKI Vault**

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

**02 — V8 Isolate Sandboxing**

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

**03 — SSRF Guard**

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

**04 — DLP & PII Redaction**

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

**05 — Cryptographic Audit Trail**

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

**06 — Honeytoken Trap System**

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

# Emergency Kill Switch

EU AI Act Art. 14(1) Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

**01 — Server deactivated**

The MCP server is immediately taken offline across the entire cluster.

**02 — All tokens revoked**

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

**03 — WebSocket connections killed**

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

## Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

**Control Plane**

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

**Agent Activity**

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

**FinOps**

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

**Tool Health**

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

**Firewall & DLP**

PII redaction activity, sensitive data protection counters, and security event timeline.

**Incident Log**

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

# Digital Receipt Archive Plan MCP

4 tools available
Cloud-hosted on Vinkius

Stop digging through folders and email threads to find a single proof of purchase. This MCP turns your AI client into a dedicated document controller for your financial records. You can ask your agent to pull up specific metadata for an item or check if you're missing a receipt for a recent transaction. It keeps your archive tidy by grouping files into logical collections like merchant or year, making it easy to audit your spending. Most importantly, it watches your deadlines for you. If a return window is closing or a product warranty is about to expire, your agent can flag it before it's too late. It's a hands-off way to ensure your digital paper trail is complete and actionable.

## Core Capabilities

**01 — Automated Filing**

Your agent uses this to group receipts by merchant or category for easier browsing.

**02 — Gap Detection**

The AI checks your transaction logs against your files to find missing documentation.

**03 — Deadline Monitoring**

Your agent identifies when warranties or return windows are about to expire.

**04 — Metadata Retrieval**

The AI pulls specific details and file locations for any receipt in the archive.

## One Click on Vinkius — From Prompt to Execution

Available at **vinkius.com/en/ai-agent-connect/digital-receipt-archive-plan** — connect your AI agent in three steps.

01 Connect the MCP to your preferred client like Claude or Cursor via Vinkius.

02 Grant the agent access to your digital receipt archive.

03 Ask your agent questions about missing files or upcoming deadlines.

04 The agent executes the necessary tools to retrieve data or organize files.

Connecting this MCP to your AI client gives your agent immediate access to your receipt archive.

## Built For

This is built for anyone managing high volumes of digital purchase records who needs an automated way to audit and track them.

**Accountants**

They hand off the task of identifying missing transaction documentation to the agent.

**Small Business Owners**

They use the agent to monitor business expense categories and warranty timelines.

**Personal Finance Managers**

They rely on the agent to track return windows and organize personal spending archives.

## What Changes When You Connect

01 Reduces time spent searching for specific purchase metadata.

02 Prevents missed return windows by flagging upcoming deadlines.

03 Ensures audit readiness by identifying missing receipt files.

04 Organizes messy digital archives into clean, searchable groups.

## Real-World Applications

**Audit Preparation**

Ask your agent to find all missing receipts for a specific month to ensure your records are complete.

**Warranty Management**

Check for upcoming warranty expirations to decide if a repair or replacement is needed.

**Expense Categorization**

Use the agent to group all electronics or travel receipts into single collections.

**Return Tracking**

Identify which items are still within their eligible return period before they expire.

## Patterns to Avoid

### Manual folder hunting

AVOID

You spend twenty minutes clicking through nested folders to find a specific invoice from last July.

✓ INSTEAD

Ask your agent to find the exact file location immediately using `get_receipt_details`.

### Ignoring expiration dates

AVOID

You realize a laptop warranty expired yesterday right when you need a repair.

✓ INSTEAD

Set your agent to proactively flag these dates by running `get_upcoming_deadlines` regularly.

### Assuming your archive is complete

AVOID

You start an audit only to realize half your transaction logs don't have matching receipts.

✓ INSTEAD

Run `get_missing_receipts` to identify exactly which documents are missing before you start your review.

## The Right Fit

Connect this MCP if you manage high volumes of digital receipts and need to track warranties or audit readiness. Do not connect it if you only make a few purchases a year. The decision depends on whether your current filing system requires manual intervention to find proof of purchase.

# Digital Receipt Archive Plan: 4 Essential Tools

These tools give your agent full control over your financial document archive. Use them to find missing files, track deadlines, and organize your records.

| # | TOOL | DESCRIPTION |
|---|---|---|
| 01 | `get_filing_groups` | This tool organizes your receipt records into logical collections like merchant, category, or year. |
| 02 | `get_missing_receipts` | This tool identifies gaps in your archive by comparing your transaction logs against the files you actually have. |
| 03 | `get_receipt_details` | This tool pulls the full metadata and specific storage location for any individual receipt. |
| 04 | `get_upcoming_deadlines` | This tool finds receipts that have approaching return windows or warranty expirations. |

# See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

**U** Show me all my missing receipts for Amazon.

I found 2 missing receipts for Amazon: a purchase from March 12th and another from June 5th.

**U** What return deadlines are coming up in the next 30 days?

You have one return deadline approaching: the Sony Headphones from Best Buy expire on October 15th.

**U** Get the details for receipt ID 98765.

Receipt 98765 is for a Logitech Mouse purchased at Staples on January 10th, 2024. It is filed under Electronics.

# Frequently Asked Questions

01 **How does this MCP find missing receipts?**

It compares your existing transaction logs against the files currently in your digital archive to spot discrepancies.

02 **Can I use this with Claude or Cursor?**

Yes, you can connect this MCP to any MCP-compatible client including Claude, Cursor, and Windsurf.

03 **What kind of deadlines can it track?**

The MCP tracks return windows and warranty expiration dates found within your receipt metadata.

04 **Do I need to host this myself?**

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately after connection.

05 **Can it organize my receipts by year?**

Yes, the filing tool allows your agent to group receipts into collections by merchant, category, or year.

06 **How can I see which receipts are missing?**

You can use the `get_missing_receipts` tool to identify transactions that lack a corresponding digital file.

07 **Can I track warranty expirations?**

Yes, the `get_upcoming_deadlines` tool allows you to monitor both warranty and return deadlines within a specified day window.

08 **How do I group my receipts?**

Use `get_filing_groups` to organize your records by merchant, category, or year.

# Go Live in 60 Seconds

Get your connection token from **cloud.vinkius.com**, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

```
https://edge.vinkius.com/[TOKEN]/mcp
```

| CLIENT | WHERE TO CONFIGURE |
|---|---|
| Claude AI | Profile → Customize → Connectors → "+" → Add custom connector → Paste endpoint |
| Cursor | Settings → Features → MCP Servers → "+ Add New MCP Server" → Type: SSE → Paste endpoint |
| VS Code | Ctrl/Cmd+Shift+P → "MCP: Add Server" → add `"digital-receipt-archive-plan": { "url": "…" }` |
| Windsurf | MCP Settings → `mcp_settings.json` → Add endpoint URL |
| ChatGPT | Settings → Tools & plugins → Add MCP server → Paste endpoint |
| Gemini | Extensions → Add MCP Server → Paste endpoint URL |
