Disaster Insurance Records Plan MCP

Keep your property evidence ready for immediate insurance claims.

Disaster Insurance Records Plan MCP helps you manage property evidence and insurance readiness. It organizes your assets, identifies documentation gaps, and provides quick access to insurer contact details so you aren't scrambling when a disaster hits. Connect it to your AI client to maintain a claim-ready dossier of all your policies and physical evidence.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Disaster Insurance Records Plan MCP

4 tools available

Cloud-hosted on Vinkius

When a disaster strikes, the difference between a fast payout and a months-long headache is your documentation. This MCP keeps your property evidence and insurance details organized and ready for action. Instead of digging through old emails or physical folders during an emergency, you can ask your AI client to pull up your entire insurance dossier or find the specific contact number for your provider.

You can use it to stay proactive by scheduling regular record reviews to ensure nothing is outdated. It also acts as a gap analysis tool, scanning your files to tell you exactly which receipts or photos you're missing to make a successful claim. By maintaining a continuous loop of updates, you ensure that your inventory and policy details are always current and ready to be handed over to an adjuster the moment you need them.

Core Capabilities

01 — Dossier Compilation

Your agent gathers all assets and policies into a single claim-ready file.

02 — Gap Detection

The AI identifies missing receipts or photos needed for a successful claim.

03 — Contact Retrieval

Your agent pulls up insurer contact cards instantly during emergencies.

04 — Review Scheduling

The tool calculates when you need to update your records to keep them current.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/disaster-insurance-records-plan — connect your AI agent in three steps.

- 01 Connect the MCP to Claude, Cursor, or Windsurf via Vinkius.
- 02 Provide your policy details or asset information to your AI client.
- 03 Ask your agent to check for missing evidence or compile a dossier.
- 04 Use the generated contact cards or record packets during a claim.

Connect the MCP to your preferred client and start managing your records through natural conversation.

Built For

This MCP is built for anyone managing high-value property who needs to be ready for unexpected disasters.

Homeowners

Use it to maintain a digital inventory of assets and insurance policies.

Property Managers

Hand off the task of tracking evidence and policy updates to your AI agent.

Estate Planners

Organize comprehensive asset dossiers for client property protection.

What Changes When You Connect

- 01 Reduces claim delays by identifying missing evidence before you file.
- 02 Provides instant access to insurer contact details during emergencies.

-
- 03 Automates the scheduling of record reviews to prevent outdated documentation.
-
- 04 Centralizes all policy and asset data into a single, organized dossier.
-

Real-World Applications

Pre-Disaster Preparation

Use the tool to ensure all your high-value item photos and receipts are accounted for before storm season.

Immediate Emergency Response

Get your insurer's contact information instantly when you need to report damage.

Routine Documentation Audits

Ask your agent to check for missing evidence to keep your records up to date.

Claim Filing

Generate a complete dossier of assets to hand over to an insurance adjuster.

Patterns to Avoid

Waiting for a disaster to organize

❌ AVOID

You realize your receipts are lost only after a storm hits your property. You spend days searching through old emails while the damage gets worse.

✓ INSTEAD

Stay ahead by using `calculate_update_cadence` to know exactly when to refresh your records.

Submitting incomplete claim evidence

❌ AVOID

You send a pile of random photos to your adjuster and they reject the claim because a key receipt is missing.

✓ INSTEAD

Run `identify_missing_evidence` first to see exactly which photos or receipts you still need to collect.

Searching for contact info during a crisis

❌ AVOID

You are standing in a flooded basement trying to find your insurance policy number and the agent's phone number in a stack of papers.

✓ INSTEAD

Keep things simple by using `get_claim_contact_card` to pull up your provider's details instantly through your AI client.

The Right Fit

Connect this MCP if you manage high-value property or multiple estates that require constant documentation readiness. Do not connect it if you only have basic renter's insurance with no significant assets to track. The decision rests on whether you need a continuous, automated audit of your insurance readiness.

Disaster Insurance Records Plan: 4 Essential Tools

These tools manage your property documentation and insurance contact data. They help you find gaps in your evidence and prepare claim-ready dossiers.

#	TOOL	DESCRIPTION
01	calculate_update_cadence	This tool tells you exactly when you need to review your records next. It helps you stay on top of documentation updates without manual tracking.
02	get_claim_contact_card	This tool provides a clear, readable summary of your insurer's contact information. Use it to get immediate access to your provider during an emergency.
03	get_insurance_records_packet	This tool compiles a complete, claim-ready dossier of all your assets and policies. It gathers everything an adjuster needs into one organized package.
04	identify_missing_evidence	This tool pinpoints the specific gaps in your documentation. It identifies missing photos or receipts that could stall a successful claim.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Can you show me my insurance records packet for policy POL-123?

Here is your claim-ready dossier for policy POL-123. It includes your verified inventory, evidence manifest, and a readiness score of 85%.

U What is the contact information for my current insurance policy?

Your primary contact for this policy is Insurer Corp at 555-0199. Please call them first, then document any damage.

U Check if I have any missing evidence for my policy.

You have 3 items missing documentation. Specifically, you need to upload a receipt for the high-value electronics and a photo for the living room furniture.

Frequently Asked Questions

01 How do I use this MCP with my AI client?

You connect once through the Vinkius catalog. After that, you can use the tools directly within Claude, Cursor, Windsurf, or any other MCP-compatible client.

02 What kind of evidence can I track?

You can track digital evidence like photos and receipts that prove the existence and value of your assets for insurance purposes.

03 Can this MCP help me file a claim?

It prepares you for the claim by compiling a complete dossier of assets and identifying any missing documentation you'll need to prove your loss.

04 How often should I update my records?

The MCP includes a tool that calculates your specific update cadence so you know exactly when to review your files.

05 Where is my data hosted?

Vinkius hosts and manages the MCP, ensuring it is ready to run whenever you connect your AI client.

06 How do I know if my records are ready for a claim?

You can use ``get_insurance_records_packet`` to check your readiness score, which evaluates if items have both photos and receipts.

07 What should I do if I am missing documentation?

Use ``identify_missing_evidence`` to generate a prioritized checklist of missing photos, receipts, or redundant storage requirements.

08 How often should I update my insurance records?

The ``calculate_update_cadence`` tool determines your next review date based on your last audit and the value of your assets.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
