Emergency Pet Evacuation Plan MCP

Coordinate pet transport and readiness during emergencies.

Emergency Pet Evacuation Plan MCP helps you manage the logistics of moving animals during crisis situations. Your AI client uses this tool to verify documentation, build supply lists based on specific medical needs, plan transport routes, and identify authorized caretakers at your destination.

A+ Quality Score 100/100

coordination

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Emergency Pet Evacuation Plan MCP

4 tools available

Cloud-hosted on Vinkius

When an emergency hits, you don't have time to hunt for vaccination records or guess what supplies a specific pet needs. This MCP gives your AI agent the ability to handle the heavy lifting of pet evacuation logistics. You can use it to check if a pet is actually cleared to move based on destination rules and current documentation. It handles the math of transport by determining the best order of operations and carrier requirements for your group of animals. Instead of manual checklists, your agent generates specific packing lists tailored to each pet's dietary and medical requirements. It also keeps track of who is authorized to receive the pets at the destination, ensuring a smooth handoff when you arrive. It's built to turn your AI client into a coordinated logistics coordinator for animal safety.

Core Capabilities

01 — Readiness Verification

Your agent checks pet documentation against specific destination requirements.

02 — Supply Management

The AI builds packing lists based on pet-specific medical and food needs.

03 — Transport Planning

Your agent calculates the best way to move multiple pets and the carriers they need.

04 — Contact Coordination

The AI identifies authorized personnel at the evacuation destination.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/emergency-pet-evacuation-plan — connect your AI agent in three steps.

- 01

Connect your preferred MCP-compatible client to Vinkius.
- 02

Ask your AI agent to check pet readiness or generate a packing list.
- 03

The agent uses the MCP tools to process documentation and logistics.
- 04

Receive organized plans, lists, and contact info directly in your chat.

Connect your AI client to Vinkius to start managing pet logistics immediately.

Built For

This MCP is designed for people managing animal safety during sudden relocation or disaster response.

Emergency Coordinators

They hand off logistics and readiness checks to the AI to manage large groups of animals.

Pet Owners

They use the AI to quickly generate packing lists and verify their pets are ready to move.

Shelter Managers

They use the tool to coordinate handoffs between transport teams and destination caretakers.

What Changes When You Connect

- 01

Reduces manual errors in pet documentation checks.
- 02

Automates supply lists based on individual animal needs.
- 03

Organizes transport logistics for multiple pets at once.

04 Centralizes authorized contact info for destination handoffs.

Real-World Applications

Natural Disaster Response

Quickly verify if pets are ready to move when a wildfire or flood forces an evacuation.

Large Scale Pet Relocation

Organize the transport of multiple animals by calculating carrier needs and movement order.

Shelter Handoffs

Ensure pets are delivered to the correct authorized personnel at a new facility.

Medical Supply Prep

Generate specific lists of food and medicine for pets with complex health requirements.

Patterns to Avoid

Manual Checklist Guesswork

❌ AVOID

You try to remember every pet's specific dietary needs and medical requirements from memory during a flood evacuation.

✓ INSTEAD

Let your agent build a precise, pet-specific list using `generate_packing_list`.

Destination Readiness Blindness

❌ AVOID

You arrive at a shelter only to find out the pet's vaccination records don't meet the new facility's rules.

✓ INSTEAD

Run `check_evacuation_readiness` to confirm documentation matches destination requirements before you leave.

Disorganized Transport Logistics

❌ AVOID

You attempt to move a large group of animals without knowing the best order to load them or what carriers you need.

✓ INSTEAD

Use `calculate_logistics_plan` to determine the best order of operations and carrier needs for the whole group.

The Right Fit

Connect this MCP if you manage animal safety during disasters or large scale relocations. Do not connect it if you are only managing a single pet in a stable environment. The decision depends on whether you need to coordinate logistics for multiple animals or complex destination requirements.

Emergency Pet Evacuation Plan 4 Tools

These tools handle the logistics of animal readiness, supply planning, and destination coordination.

#	TOOL	DESCRIPTION
01	calculate_logistics_plan	This tool determines the best order of operations and specific carrier requirements needed to move all your pets.
02	check_evacuation_readiness	Use this to see if a specific pet is cleared for evacuation by checking their documentation against destination rules.
03	generate_packing_list	This tool creates a custom checklist of supplies for each pet based on their individual medical and dietary needs.
04	get_caretaker_contacts	This tool retrieves contact information for the people authorized to handle the pets at your destination.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Is pet_123 ready to be evacuated to destination_abc?

Pet_123 is ready for evacuation to destination_abc.

U What supplies do I need to pack for pet_456 and pet_789?

For pet_456, you need 5kg of dry food and a medical kit. For pet_789, you need 3kg of dry food and specialized water supplies.

U Who can I contact at destination_xyz to receive the pets?

The authorized contacts at destination_xyz are Jane Doe (Primary Caretaker) at 555-0123 and John Smith (Transport Coordinator) at 555-0456.

Frequently Asked Questions

01 What AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

02 How does the packing list work?

The tool looks at the dietary and medical needs of each pet to create a specific list of required supplies.

03 Can I use this for multiple pets at once?

Yes, the logistics tool is designed to calculate the best order of operations and carrier requirements for moving all your pets.

04 Does this MCP handle contact information?

Yes, it includes a tool to retrieve contact details for people authorized to receive pets at a destination.

05 How is readiness determined?

The tool checks a pet's specific documentation against the rules of the destination to see if they are cleared to move.

06 How do I know if a pet is ready to be moved?

You can use the `check\_evacuation\_readiness` tool to verify if a pet's veterinary records are valid and if the destination can accept their species.

07 Can I plan the transport for multiple pets at once?

Yes, the `calculate\_logistics\_plan` tool helps determine the sequence of steps and carrier assignments for a group of pets.

08 How are packing lists generated?

The `generate\_packing\_list` tool creates a checklist of food, water, and medical supplies based on the specific needs of the pets provided.
