Emergency Relocation Coordination Plan MCP

Turn official emergency notices into structured household logistics.

Emergency Relocation Coordination Plan MCP converts official evacuation orders and emergency directives into organized, actionable roadmaps. It helps you manage the chaos of a sudden move by handling everything from packing assignments to return-home safety checks. Connect it to your AI client to build timelines and coordinate with your household or contacts immediately.

A+ Quality Score 100/100

safety

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Emergency Relocation Coordination Plan MCP

4 tools available

Cloud-hosted on Vinkius

When an emergency notice hits, you don't have time to manually draft checklists or figure out who is doing what. This MCP acts as a logic engine for your emergency management. You feed it official directives and your specific household constraints, and it outputs a structured plan. It handles the heavy lifting of logistics so you can focus on getting your family or team to safety. You can use it to build a primary roadmap based on official deadlines, distribute packing tasks among people, and set up a schedule to keep your contacts informed. Once the danger passes, it also provides a way to evaluate if it is actually safe to head back home based on the status of utilities and official clearance.

Core Capabilities

01 — Logistics Planning

Your agent uses official notices to build a timed roadmap for moving.

02 — Task Distribution

The AI assigns specific packing duties to different people in your household.

03 — Contact Coordination

It creates a schedule to notify necessary contacts about your plan.

04 — Safety Validation

Your agent checks official status updates to confirm when it is safe to return home.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/emergency-relocation-coordination-plan — connect your AI agent in three steps.

01 Connect the MCP to your preferred client like Claude or Cursor via Vinkius.

02 Provide the official emergency notice or directive to your AI agent.

03 Ask the agent to generate a roadmap or assign tasks using the built-in tools.

04 Follow the structured plan to execute your relocation or return home.

The MCP connects your AI client to a specialized emergency logic engine.

Built For

This MCP is for anyone needing to manage sudden, high-stakes household or group movements.

Heads of Household

They hand off the task of organizing packing lists and timelines to the AI.

Emergency Coordinators

They use the tool to turn official directives into actionable steps for groups.

Logistics Managers

They rely on the tool to validate safety status and manage notification schedules.

What Changes When You Connect

- 01** Converts messy emergency notices into clean, timed roadmaps.
- 02** Prevents task overlap by assigning specific packing duties to individuals.
- 03** Reduces decision fatigue during high-stress relocation events.

- 04 Provides a logic-based check for returning home once a crisis ends.
-

Real-World Applications

Sudden Evacuation

Use the tool to quickly build a departure timeline when an evacuation notice is issued.

Household Organization

Assign specific items like medical supplies or pet food to different family members to speed up packing.

Family Communication

Generate a schedule to make sure all necessary contacts are notified of your location changes.

Post-Crisis Return

Check if it is safe to return home once official status updates indicate the area is clear.

Patterns to Avoid

Manual task assignment

❌ AVOID

You try to shout orders at family members while trying to pack your own bags during an evacuation.

✓ INSTEAD

Use ``assign_packing_responsibilities`` to distribute specific duties so everyone knows exactly what to grab without you having to micromanage.

Guessing return safety

❌ AVOID

You drive back toward your neighborhood because the sun is out, even though utility companies haven't cleared the area.

✓ INSTEAD

Run ``validate_return_readiness`` to check if conditions actually meet the requirements for heading home.

Uncoordinated contact updates

❌ AVOID

You send dozens of frantic, unorganized texts to relatives while you are trying to drive away.

✓ INSTEAD

Set up a clear communication plan using ``generate_notification_schedule`` to keep people informed on a predictable cadence.

The Right Fit

Connect this MCP if you manage a household or a group that needs to move quickly during a crisis. Do not connect it if you are looking for general weather tracking or non-emergency logistics. The decision depends on whether you need to turn official emergency directives into a concrete, actionable plan for people.

Emergency Relocation Coordination Plan Tools

These tools turn chaotic emergency notices into structured departure timelines and task lists. They manage everything from packing duties to safety checks for returning home.

#	TOOL	DESCRIPTION
01	assign_packing_responsibilities	This tool splits up the work of gathering essential items among your household members. It helps ensure no one person is overwhelmed during a sudden move.
02	generate_notification_schedule	Use this to identify and schedule updates for the people who need to know your relocation status. It keeps your contacts in the loop automatically.
03	plan_relocation_logistics	This tool builds your primary relocation roadmap. It uses official notices and your available resources to create a clear timeline for departure and arrival.
04	validate_return_readiness	This tool evaluates whether you can safely end your relocation. It checks if conditions are met so you can begin the process of returning home.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U We have an evacuation notice for 4 PM today. We have two adults and one child. We need to move to the city shelter. Can you plan our relocation?

Relocation Plan: 1. Packing (Immediate): Adults to pack documents and medical supplies. 2. Departure (3:00 PM): Move to transport point. 3. Arrival (4:30 PM): Reach city shelter. Total estimated cost: \$0.

U Is it safe to return home yet? The official status is 'Clear' and electricity is back on.

Yes, based on the official status 'Clear' and restored utilities, it is safe to return home.

U Assign packing duties for documents, clothing, and pet food to Alice and Bob.

Assignments: Alice: Documents, Clothing; Bob: Pet food. Critical Items: Pet food (High Priority).

Frequently Asked Questions

01 How do I use this MCP with my AI?

You connect it once through the Vinkius platform. After that, any MCP-compatible client like Claude, Cursor, or Windsurf can use the tools directly.

02 Can this MCP help me decide when to go home?

Yes. You can use the `validate_return_readiness` tool to evaluate if it is safe to return based on official status and utility updates.

03 Does this tool work with official government notices?

Yes. The tool is designed to process official directives and use them to drive the relocation roadmap.

04 Can I assign specific tasks to my family members?

Yes. The `assign_packing_responsibilities` tool allows you to distribute specific items to different people in your household.

05 Do I need to host this myself?

No. Vinkius hosts and manages the MCP for you, so it is ready to use immediately after you connect.

06 How does the tool handle conflicting instructions?

The engine follows strict directive precedence. Official government or agency notices take absolute priority over personal preferences or private lodging availability.

07 Can I use this to decide when to return home?

Yes, you can use `validate_return_readiness` to evaluate if the area is clear, utilities are restored, and safety criteria are met.

08 How are packing tasks assigned?

By using `assign_packing_responsibilities`, the tool distributes item categories and pet needs to available household members.
