

MCP SERVER

NO CODE

CLOUD HOSTED

Etsy MCP

Manage listings, orders, and reviews through conversation.

Etsy MCP connects your AI agent directly to your entire shop backend. You can audit inventory, process order receipts, and review customer feedback—all from a natural conversation. This lets you manage listings, track sales, and maintain brand reputation without logging into the Etsy dashboard.

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Etsy MCP

10 tools available

Cloud-hosted on Vinkius

Running a handmade or vintage shop means juggling inventory counts, fulfilling orders, and keeping up with reviews. With this MCP, your agent handles all that overhead. You tell it what needs doing—like checking if last week's batch of earrings sold out—and it pulls the data instantly. Need to update ten listing descriptions because Etsy changed its policy? Just ask. Your agent updates them in bulk and confirms they're live. It acts like a virtual shop manager, keeping your listings optimized and your customers happy. Through Vinkius, you get access to this core set of functions alongside thousands of others, turning complex shop operations into simple commands for your AI client.

Core Capabilities

01 — Audit full inventory details

The agent can list every current listing in your shop and retrieve specific data points like pricing, state, and URLs.

03 — Monitor customer feedback

The tool lists all submitted reviews for your shop, keeping you up to date on brand reputation and specific customer praise or complaints.

05 — Search the broader marketplace

The agent searches for active listings across Etsy so you can find market inspiration or monitor competitors' offerings.

02 — Track sales and orders

You can browse historical receipts to see detailed information on recent sales and their fulfillment status.

04 — Update listing content

You can use natural language prompts to update titles and descriptions across multiple listings, ensuring your catalog stays current.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/etsy — connect your AI agent in three steps.

- 01 Subscribe to this MCP and provide your specific Etsy API Key and Access Token.
- 02 Connect the credentials to your preferred AI client (Claude, Cursor, etc.).
- 03 Tell your agent exactly what you need—for instance, 'List all receipts from last month'—and it retrieves the structured data directly.

The bottom line is you talk to your agent, and it talks to Etsy for you.

Built For

This MCP is essential for independent artisans and small e-commerce operations. It helps the owner who's tired of logging into a dashboard just to check stock or answer basic customer questions. It's built for people whose revenue depends on accurate, timely shop data.

Independent Artisan

Uses the MCP to quickly list all available inventory and update descriptions across dozens of listings after a minor product change.

Operations Manager

Runs routine audits by listing shop receipts and checking customer reviews to ensure fulfillment processes are running smoothly and identifying potential bottlenecks.

Small Business Owner

Uses the MCP to search for active listings on Etsy, monitoring market trends or finding ideas for new product lines without leaving their primary workflow.

What Changes When You Connect

- 01 Stop manually checking stock. Use the agent to list shop listings automatically; you'll instantly know which items are running low without opening a dashboard tab.

-
- 02 Never miss an order detail again. By listing shop receipts or retrieving a specific receipt, your agent gives you immediate clarity on fulfillment status and sales totals.

 - 03 Build instant reputation reports. You can list shop reviews to track customer sentiment quickly, letting you address negative feedback before it spreads.

 - 04 Keep descriptions fresh with minimal effort. Instead of logging in to manually update listings, simply ask the agent to run an `update_listing` command using natural language prompts.

 - 05 Gain competitive insight. Use `search_active_listings` to monitor what similar products are selling for right now on Etsy, giving you a real-time edge.
-

Real-World Applications

The weekly inventory audit

A small business owner needs to know which items sold out last week and how many remaining. They ask their agent to list shop receipts and then use the available tools to check all active listings, getting a clear, consolidated report immediately.

Optimizing product pages

After noticing a competitor listing with a better title, the seller tells the agent to search for active listings using that keyword. They then use `update_listing` to rewrite their own titles to match the market's best practices.

Responding to negative feedback

A seller gets five new reviews overnight, including three critical ones about packaging. They ask their agent to list shop reviews so they can pull the specific complaints and draft an apology response without reading through a massive feed.

Cross-checking product data

A marketing lead needs to confirm if a new batch of custom engraved items was published correctly. They ask the agent to list shop sections and then use `get_listing` on specific SKUs to verify all metadata is correct.

Patterns to Avoid

Manual Copy-Pasting

X AVOID

Manually logging into Etsy, navigating through the orders tab, copying five different receipts, and pasting them into a spreadsheet just to track sales totals for accounting.

✓ INSTEAD

Instead of copy-pasting, ask your agent to list shop receipts. This tool pulls all the required order data directly into your workflow, saving you hours of manual entry.

Overlooking Listing Details

X AVOID

Assuming that just because a listing is active means it's optimized and visible. Missing key details like pricing or status until a customer complains.

✓ INSTEAD

Use the `get_listing` tool to pull all metadata for specific items, verifying prices and statuses upfront before relying on Etsy's default display.

Ignoring Market Shifts

X AVOID

Sticking with old listing descriptions because they worked last year, even though current popular searches are different.

✓ INSTEAD

Use `search_active_listings` to monitor what people are actually searching for on Etsy right now. Then use `update_listing` to rewrite your titles and descriptions around those high-demand keywords.

The Right Fit

Use this MCP if your core process revolves around managing the data, inventory, or customer interactions *within* your own established Etsy shop. If you need to perform routine audits, update content based on new sales data, or track reputation via reviews, this is exactly what you need. Don't use this if your primary goal is cross-platform market analysis (i.e., comparing Etsy pricing to Amazon pricing); for that, you'd look at a general e-commerce API connector. Also, if all you want is basic keyword search and you never plan on updating listings or checking order histories, the simpler listing tools might suffice, but this MCP gives you the full operational control.

The endless cycle of dashboard checking

Today, managing a shop means jumping between tabs: logging into Etsy to check sales, then opening a spreadsheet to audit inventory counts, and finally switching back to the reviews page just to see if you nailed that last shipment. You spend hours clicking through order history, manually cross-referencing receipts against current stock levels, and copy-pasting data into your internal tracking system.

With this MCP, those manual jumps disappear. Your agent handles the coordination. Need to know what sold? Ask for `list_shop_receipts`. Want to know if you have enough stock? Ask it to `list_shop_listings`. You get a single stream of actionable data without ever leaving your AI client.

Getting real-time insights with Etsy MCP

You don't have to wait for the end of the week to check performance. The agent pulls shop receipts and compiles a full `list_shop_reviews` report instantly, so you know exactly what customers are saying about your packaging or shipping speed right now.

The difference is that you go from 'I guess I should check on those sales later' to 'Here is the exact order detail for item X.' It's immediate, actionable data, giving you total control over your shop operations.

Etsy: Listing & Order Management (10 Tools)

These tools give you granular control over every aspect of your shop, from auditing individual product details to managing large batches of customer reviews.

#	TOOL	DESCRIPTION
01	<code>get_listing</code>	Retrieves detailed information about a single, specific listing.
02	<code>get_me</code>	Pulls your authenticated user and application details from Etsy for verification purposes.
03	<code>get_receipt</code>	Retrieves all the detailed information for a specific order receipt or sale.
04	<code>get_shop</code>	Fetches general details about your entire Etsy shop profile.
05	<code>list_shop_listings</code>	Generates a list of all the active listings currently within your shop.
06	<code>list_shop_receipts</code>	Provides a comprehensive list of past and current order receipts for your shop.
07	<code>list_shop_reviews</code>	Compiles a report listing all customer reviews left on your Etsy shop.
08	<code>list_shop_sections</code>	Lists the various curated sections you have set up within your shop profile.
09	<code>search_active_listings</code>	Searches and finds active listings across all of Etsy using specific keywords or criteria.
10	<code>update_listing</code>	Modifies the title, description, or other details of an existing product listing.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List my active listings in shop ID xxxx.

I've retrieved your active inventory. You have 12 listings, including 'Handmade Vase' and 'Vintage Watch'. Would you like the pricing for any of them?

U Show me the last 5 reviews for my Etsy shop.

I've found the last 5 reviews. Most customers are giving 5 stars, praising the 'fast shipping'. One customer mentioned 'beautiful packaging'. Would you like to see the full comments?

U Search for active listings with keyword 'linen dress'.

I've found several matching listings for 'linen dress'. Top results include 'Handmade Linen Summer Dress' and 'Boho Linen Tunic'. Would you like the direct links to view them?

Frequently Asked Questions

01 How do I use Etsy MCP to update my product descriptions?

You use the `update_listing` tool by telling your agent what changes you want. Instead of manually editing each listing, just tell it to rewrite titles and descriptions using natural language prompts.

02 Can I see all my past orders with Etsy MCP?

Yes. You can use `list_shop_receipts` to get a comprehensive history of your sales and order fulfillment status, making inventory tracking much easier.

03 Does the Etsy MCP help me find competitor listings?

It does. Use the `search_active_listings` tool to monitor what other sellers are listing on Etsy using specific keywords, giving you market intelligence.

04 What is the difference between `list_shop_receipts` and `get_listing`?

`list_shop_receipts` provides a summary of orders (the transaction). `get_listing` pulls deep metadata for one specific item, like its current price or URL.

05 Is the Etsy MCP only for my shop's data?

No. While it manages your own inventory and orders, you can also use `search_active_listings` to look at public listings across the entire Etsy platform.
