

MCP SERVER

NO CODE

CLOUD HOSTED

Everflow Partner Marketing MCP

Instantly audit affiliate payouts and network performance.

Everflow Partner Marketing gives your agent direct access to complex affiliate network data. You can monitor total revenue, track payout structures for specific offers, and audit the performance history of any partner or advertiser right from a chat window. Stop clicking through dashboards—get a single source of truth for your entire marketing ecosystem.

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Everflow Partner Marketing MCP

10 tools available

Cloud-hosted on Vinkius

Need to keep an eye on how your partner network performs? This MCP lets you manage complex affiliate operations without ever leaving your conversation. Instead of logging into multiple portals, you just ask your agent questions about payouts, offer health, or total conversion volume. You can check every active campaign and pull performance summaries for individual affiliates in seconds.

It gathers data on everything: which partners are performing well, how many clicks an ad is generating, and whether the payout rules haven't changed since last week. All this intelligence lives right here through Vinkius, connecting directly to Everflow's platform so your AI client can talk shop with you. You get instant answers about network health, total revenue figures, or even a list of every creative banner running for an offer.

Core Capabilities

01 — Audit overall network health

Get immediate summaries covering the volume of offers, active partners, and advertisers.

03 — Review marketing offer structures

See detailed settings for an offer, like its payout rules, targeting limits, or active status.

02 — Track affiliate performance details

Pull a deep profile on any specific partner, including their recent activity and conversion totals.

04 — Monitor real-time traffic metrics

Access high-level numbers on total clicks, conversions, and gross revenue across the network.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/everflow-partner-marketing — connect your AI agent in three steps.

- 01 Connect your AI client to this MCP within Vinkius using your Everflow API Key.
- 02 Tell your agent what you need—for example, 'What was our revenue last week?'
- 03 The MCP runs the query and returns a summarized answer, showing metrics like clicks or total payouts.

The bottom line is that instead of navigating complex dashboards, you just talk to your AI agent and get immediate, accurate marketing intelligence.

Built For

This is for the affiliate manager who can't afford to wait until Friday for payout reports. It's for the network owner needing a live performance check at 2 AM. If you manage paid partnerships, this MCP solves your constant dashboard-checking problem.

Affiliate Manager

Checking if specific partners are hitting their required conversion goals or validating the payout structure for a new campaign.

Network Owner

Running an immediate audit on overall network revenue and tracking which advertisers contribute the most traffic right now.

Operations Specialist

Listing all available creative assets (banners, links) for a specific campaign or checking if any offers have expired targeting rules.

What Changes When You Connect

- 01 You get immediate access to payout rules. Instead of digging through documents, you ask your agent for the details on any offer using `get_offer_detailed_data` and know exactly how much partners earn.

-
- 02** Stop guessing about overall health. The `quick_partner_marketing_audit` tool gives you a single-page summary—offers, affiliates, advertisers—all in one conversation.
-
- 03** Track partner success on the fly. Use `get_affiliate_detailed_profile` to get performance summaries for any affiliate ID without leaving your chat window.
-
- 04** Know exactly what's running. You can use `list_offer_marketing_creatives` to verify that all necessary banners and links are correctly assigned to an active campaign.
-
- 05** Get a clear view of network activity. The `get_network_performance_summary` tool provides instant metrics on total clicks, conversions, and revenue streams.
-

Real-World Applications

Investigating low conversion rates for a specific partner.

The affiliate manager notices that Partner X's conversions dropped last week. They ask the agent to run `get_affiliate_detailed_profile` and immediately see that their clicks are fine, but their current payout structure seems misaligned with recent ad performance.

Onboarding a new partner and checking their access.

The ops specialist needs to verify all current partners. They run `list_marketing_affiliates` first, then use `list_network_advertisers` to ensure the correct ad accounts are set up before giving final approval.

Preparing a quarterly report on network revenue.

The network owner needs high-level data for an executive meeting. They use `get_network_performance_summary` to pull the total clicks, conversions, and gross revenue figures in one go, bypassing weeks of manual spreadsheet consolidation.

Troubleshooting an expired campaign.

A manager asks about current campaigns. The agent uses `list_currently_active_offers` to confirm which offers are live, and then runs `get_offer_detailed_data` on a specific offer ID to check its payout rules.

Patterns to Avoid

Manual spreadsheet data entry

✗ AVOID

Opening the Everflow dashboard, exporting a CSV for affiliates, opening another tab for network metrics, and manually comparing revenue totals across three different sheets.

✓ INSTEAD

Just ask your agent to run ``get_network_performance_summary`` or use ``quick_partner_marketing_audit``. It compiles all that data into one conversational response.

Using general analytics tools

✗ AVOID

Relying on a basic reporting tool that only shows clicks but doesn't calculate the resulting payout based on specific offer rules.

✓ INSTEAD

Use ``get_offer_detailed_data`` to see the exact payout logic, then combine that with ``get_affiliate_detailed_profile`` for accurate financial tracking.

Ignoring metadata limitations

✗ AVOID

Assuming a partner's performance data is always available and detailed.

✓ INSTEAD

First check the limits using ``get_everflow_network_metadata``. This tells you what data is actually accessible before you try to pull large reports.

The Right Fit

Use this MCP if your primary pain point involves aggregating financial performance metrics, checking payout rules, or auditing affiliate activity across multiple campaigns. It's built for the person who lives by KPIs and needs rapid data validation. Don't use it if you simply need to manage user roles or update basic account settings—that requires a CRM tool. If your goal is general content management, look at a dedicated asset library MCP instead. But if the task involves dollars, clicks, conversions, or partner performance summaries, this is the right one.

The headache of tracking affiliate payouts and network health

Today, keeping tabs on your partnership revenue feels like a job requiring multiple logins. You open the dashboard for offers, copy-paste data into a spreadsheet; then you jump to the affiliate portal just to check a partner's profile. Next, you log into the network stats tool just to find total clicks. It's tedious, it takes hours of clicking through tabs, and worse, you always wonder if you missed a key metric somewhere.

With this MCP, that whole process vanishes. You tell your agent what you need—say, 'Show me the payout status for Partner ID 500.' The system runs `get_affiliate_detailed_profile`, pulls all the relevant data, and gives you a direct answer in plain language. No clicking required.

See how Everflow Partner Marketing MCP provides instant payout validation

Manually validating payouts means cross-referencing three sources: the offer rules, the partner's activity log, and the overall network summary. If any one of those data points is slightly off—a missing creative asset or an outdated rule—your entire report becomes suspect.

Now, you ask your agent to check the details on a specific campaign using `get_offer_detailed_data`. You get instant confirmation that every variable, from targeting rules to payout amounts, is current. Your data is accurate and immediately actionable.

Everflow Partner Marketing: 10 Tools

These tools let your agent access specific data points inside the Everflow platform. You can run detailed audits on partners, offers, and overall network metrics.

#	TOOL	DESCRIPTION
01	<code>get_everflow_network_metadata</code>	Retrieves technical details and usage limits for your Everflow network account.
02	<code>get_affiliate_detailed_profile</code>	Pulls a comprehensive performance summary and detailed profile for one specific affiliate partner.
03	<code>get_offer_detailed_data</code>	Retrieves all the setup rules, tracking information, and payout structures for a single marketing offer.
04	<code>get_network_performance_summary</code>	Generates an immediate, high-level summary of current network metrics like clicks, conversions, and revenue.
05	<code>quick_partner_marketing_audit</code>	Runs a quick check to give you a consolidated snapshot of offers, affiliates, and advertisers in the system.
06	<code>list_currently_active_offers</code>	Identifies and lists all marketing campaigns that are currently marked as 'Active'.
07	<code>list_network_advertisers</code>	Lists every single advertiser account configured within your network.
08	<code>list_marketing_affiliates</code>	Retrieves a full roster of all affiliates and partners associated with your network.
09	<code>list_offer_marketing_creatives</code>	Shows you every creative asset, like banners or links, linked to a particular marketing offer.
10	<code>list_marketing_offers</code>	Provides a full listing of all marketing offers managed in your Everflow account.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all active marketing offers.

I've found 12 active offers, including 'Summer Sale Promo' and 'VIP Loyalty Reward'. 8 offers are currently generating conversions. Would you like to see the payout details for the Summer Sale?

U Show me the performance for affiliate ID 12345.

Affiliate ID 12345 ('Top Partner Media') has generated 1,500 clicks and 85 conversions this week, totaling \$4,250 in revenue. Their current payout is \$850. Should I pull their detailed conversion log?

U What is the network performance summary for today?

Today across the network, you have 15,000 total clicks and 450 conversions (3% CR). Gross revenue is \$12,500 with a total network payout of \$2,500. Performance is up 5% compared to yesterday. Should I check which advertiser is leading?

Frequently Asked Questions

01 How do I use Everflow Partner Marketing MCP to check a partner's earnings?

You use the `get_affiliate_detailed_profile` tool. Simply ask your agent for the performance summary of a specific affiliate ID, and it returns their clicks, conversions, and revenue.

02 Can Everflow Partner Marketing MCP list all my current campaigns?

Yes. Use `list_marketing_offers` to get a full listing of every offer in your account. You can then use `list_currently_active_offers` to filter down to only the live ones.

03 What if I need total network revenue metrics?

The best tool is ``get_network_performance_summary``. This tool consolidates high-level numbers like gross revenue, total clicks, and conversions into one response.

04 Does Everflow Partner Marketing MCP help with payout rules?

Yes. You use ``get_offer_detailed_data`` to retrieve the specific settings and tracking information for any offer, including its precise payout structure.

05 Can I find out which advertisers are connected to my network?

You run the ``list_network_advertisers`` tool. It lists every advertiser account configured in your Everflow setup.
