Family Anniversary Reminder Plan MCP

Never miss a milestone or a deadline for family celebrations.

Family Anniversary Reminder Plan MCP handles the math and scheduling for your important life events. It calculates how much lead time you need for celebrations and builds a chronological list of reminders so you can stay ahead of birthdays, anniversaries, and other major occasions.

A+ Quality Score 100/100

automation

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Anniversary Reminder Plan MCP

4 tools available

Cloud-hosted on Vinkius

Managing family milestones shouldn't feel like a chore. This MCP takes the guesswork out of preparation by turning dates into actionable schedules. Instead of just remembering a date, you can define how much lead time you need to buy a gift, book a venue, or send a card. Your AI client uses this data to build a structured calendar of reminders that tells you exactly when to act. You can check upcoming notifications for a specific window or verify if your preferred way to be notified, like SMS or email, is supported. It's a practical way to ensure you're never caught off guard by a major anniversary or birthday again.

Core Capabilities

01 — Schedule Generation

Your agent builds a full timeline of reminders based on event dates.

02 — Lead Time Calculation

The MCP calculates exactly how many days you have to prepare for an event.

03 — Notification Validation

Your AI client checks if your preferred contact methods are available.

04 — Timeframe Filtering

You can pull up a specific list of reminders for a set period.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-anniversary-reminder-plan — connect your AI agent in three steps.

- 01 Connect the MCP to your AI client via Vinkius.
- 02 Provide your event dates and required lead times to your agent.
- 03 The MCP generates a chronological reminder plan.
- 04 Your agent uses the plan to notify you when it is time to act.

Connect the MCP to your client and start scheduling.

Built For

This is for anyone who wants to automate their personal life organization through an AI agent.

Family Organizers

People managing calendars for large households or extended families.

Event Planners

Individuals who need to track preparation windows for various celebrations.

AI Power Users

Users who want to hand off scheduling tasks to their AI client.

What Changes When You Connect

- 01 Automates the creation of chronological reminder lists.
- 02 Calculates preparation windows to prevent last minute rushes.
- 03 Validates communication channels to ensure notifications work.

04 Organizes multiple events into a single, manageable schedule.

Real-World Applications

Birthday Management

Set lead times for family birthdays to ensure gifts are bought in advance.

Anniversary Planning

Generate a schedule for wedding anniversaries with specific notification needs.

Holiday Prep

Use lead times to manage the preparation period for major seasonal holidays.

Notification Auditing

Check if your SMS or Email settings are compatible with the system.

Patterns to Avoid

Manual Date Tracking

❌ AVOID

You write down a wedding anniversary on a sticky note and hope you remember to buy a gift three days before it happens.

✓ INSTEAD

Use ``generate_reminder_plan`` to build a full schedule that accounts for the lead time you need to prepare.

Ignoring Notification Support

❌ AVOID

You set up a reminder for a birthday but realize too late that your preferred SMS service isn't actually configured.

✓ INSTEAD

Run ``validate_notification_config`` first to make sure your chosen communication channels are ready to go.

Vague Planning Windows

❌ AVOID

You know a holiday is coming up but you have no idea how many days you actually have to book a venue.

✓ INSTEAD

Use ``calculate_preparation_window`` to get the exact number of days available between your start date and the event.

The Right Fit

Connect this MCP if you manage a busy household or complex family calendar and want an agent to handle the prep work. Don't connect it if you prefer manual entry or don't care about advance preparation windows. The decision comes down to whether you want your AI client to proactively manage your lead times.

Family Anniversary Reminder Plan 4 Tools

These tools handle the math and scheduling for your personal milestones. They turn simple dates into a structured timeline of actionable reminders.

#	TOOL	DESCRIPTION
01	calculate_preparation_window	Determines the total time you need to prepare for a specific event. It calculates the range between your start date and the actual occasion.
02	generate_reminder_plan	Creates a chronological calendar of reminders. It takes your event dates and lead times to build a step by step schedule.
03	get_upcoming_reminders	Retrieves a filtered list of scheduled notifications. You can ask for reminders occurring within a specific timeframe.
04	validate_notification_config	Checks if your chosen communication channels like Email, SMS, or Push are supported. This ensures your reminders actually reach you through the right medium.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Create a reminder plan for Mom's birthday on June 15th with a 7-day lead time, and for our Wedding Anniversary on October 20th with a 14-day lead time. Recipients are Mom (Email) and Dad (SMS).

1. June 8th: Mom's Birthday (Email). 2. October 6th: Wedding Anniversary (SMS). 3. October 6th: Wedding Anniversary (Email).

- U** What reminders are scheduled between 2024-05-01 and 2024-06-30?

You have one reminder scheduled: June 8th for Mom's Birthday.

- U** How many days do I need to prepare if I have a 10-day lead time?

You have 10 days to prepare before the event occurs.

Frequently Asked Questions

01 How do I create a reminder plan?

You tell your AI client to use the `generate_reminder_plan` tool, providing the event dates and how much lead time you need.

02 Can I use SMS for my reminders?

You can check if SMS is supported by using the `validate_notification_config` tool through your AI client.

03 How does the MCP handle multiple events?

The `generate_reminder_plan` tool takes a set of occasions and organizes them into a single chronological calendar.

04 Can I see what is coming up next month?

Yes, you can use the `get_upcoming_reminders` tool to see all scheduled notifications within a specific timeframe.

05 What is a lead time?

A lead time is the amount of time you want to start preparing before the actual event occurs.

06 How do I create a new reminder schedule?

You can use the ``generate_reminder_plan`` tool by providing your occasions and recipient details.

07 Can I check which reminders are coming up soon?

Yes, use the ``get_upcoming_reminders`` tool to filter reminders within a specific date range.

08 What notification channels are supported?

The system supports standard channels like Email, SMS, and Push. You can verify specific support using ``validate_notification_config``.
