

MCP SERVER

NO CODE

CLOUD HOSTED

Family Emergency Contact Update MCP

Keep your institutional contact records accurate and legally compliant.

Family Emergency Contact Update MCP manages and synchronizes emergency contact data across multiple organizations. It handles complex consent hierarchies and ensures your contact information meets specific institutional requirements. You can use it to prepare submission packets, plan update sequences, audit contact validity, and schedule annual reviews through your AI client.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Emergency Contact Update MCP

4 tools available

Cloud-hosted on Vinkius

Managing emergency contacts across schools, hospitals, and other institutions is a headache because every organization has different rules. This MCP handles that complexity for you. Instead of manually checking every field for every different form, your AI client uses this tool to ensure your data respects specific consent hierarchies and organizational requirements.

You can prepare ready-to-submit data packages for specific institutions or determine the best order to send updates to ensure legal authority is established where it matters most. It also helps you stay proactive by creating audit checklists to verify contact validity and generating yearly schedules so you never miss a required update. It turns a disorganized pile of contact info into a structured, compliant system that stays current.

Core Capabilities

01 — Data Formatting

Your agent uses this to package contact info for specific institutional submission requirements.

02 — Priority Sequencing

Your agent calculates the most logical order to update different organizations.

03 — Compliance Auditing

Your agent generates checklists to ensure contact data meets legal and practical standards.

04 — Proactive Scheduling

Your agent builds annual calendars to keep your contact information from becoming outdated.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-emergency-contact-update — connect your AI agent in three steps.

- 01
- Connect the MCP to your preferred client like Claude or Cursor via Vinkius.
- 02
- Provide your contact data and the target institution's requirements to your agent.
- 03
- Ask your agent to generate packets, checklists, or schedules.
- 04
- Use the resulting data or schedules to complete your updates.

Connect the MCP to your AI client to start managing contact data through natural language.

Built For

This MCP is for individuals or professionals managing complex contact hierarchies for families or clients.

Family Administrators

People managing the legal and medical contact details for their household.

Legal Assistants

Professionals who need to ensure client contact data meets specific institutional consent rules.

Care Coordinators

Staff who manage contact updates across multiple healthcare or educational providers.

What Changes When You Connect

- 01
- Reduces errors by validating data against specific institutional rules.
- 02
- Ensures legal authority is established by sequencing updates correctly.

- 03

Prevents outdated information through automated reminder schedules.
- 04

Simplifies submissions by creating ready-to-use data packets.

Real-World Applications

Hospital Updates

Prepare a specific data packet for a medical facility that respects medical proxy hierarchies.

Annual Maintenance

Generate a yearly schedule to ensure all family contact info is reviewed and updated.

School Enrollment

Verify that emergency contacts for a student meet the school's specific requirements.

Multi-Institution Sync

Determine if you should update a bank or a doctor first to maintain proper legal standing.

Patterns to Avoid

Blindly sending raw data

❌ AVOID

You copy a list of names and numbers from a spreadsheet and send it directly to a hospital's portal.

✓ INSTEAD

Use ``generate_update_packet`` to ensure the data is formatted specifically for that institution's requirements.

Ignoring legal priority

❌ AVOID

You update a school's contact list before you've established medical proxy authority with a doctor.

✓ INSTEAD

Run ``calculate_submission_sequence`` first to find the most logical order for your updates.

Waiting for an emergency

❌ AVOID

You realize your contact list is outdated only when a family member is admitted to the ER.

✓ INSTEAD

Set up a `generate\_reminder\_schedule` to keep your information fresh throughout the year.

The Right Fit

Connect this MCP if you manage contact hierarchies for a household, a legal client, or a group of patients. Do not connect it if you only need a simple digital address book. The decision depends on whether you need to meet specific institutional rules and legal consent requirements.

Family Emergency Contact Update 4 Tools

These tools handle the heavy lifting of formatting data, sequencing updates, and scheduling reviews to keep your contact info current.

#	TOOL	DESCRIPTION
01	create_verification_checklist	This tool generates a task list to confirm your emergency contact info is legally and practically sound.
02	generate_reminder_schedule	This tool produces a yearly calendar of specific dates when you should review your contact information.
03	calculate_submission_sequence	This tool determines the best order to submit updates across different institutions based on priority.
04	generate_update_packet	This tool creates a formatted data package that is ready to be sent to a specific institution.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Generate an update packet for Westside Hospital using these contacts and requirements.

The update packet for Westside Hospital is ready. It includes the validated contact details for the primary Medical Proxy and meets all mandatory field requirements.

U What is the best order to update my contacts for the school and the hospital?

You should update the hospital first to establish legal authority, then follow up with the school.

U Create a checklist to verify my emergency contacts.

The verification checklist is ready. It includes tasks for field completeness, role-based permission validation, and consent hierarchy adherence.

Frequently Asked Questions

01 How does this MCP handle different institutional rules?

The MCP uses specialized tools to ensure data is formatted and validated according to the specific requirements of each organization.

02 Can I use this with Claude or Cursor?

Yes, you can connect this MCP to any MCP-compatible client including Claude, Cursor, and Windsurf.

03 What is a submission sequence?

It is the calculated order of updates that ensures you establish legal authority at one institution before moving to the next.

04 Does this MCP store my contact data?

Vinkius hosts the MCP, but the tool is designed to process and format the data you provide to your agent for specific tasks.

05 How do I know if my contacts are valid?

You can use the `create_verification_checklist` tool to generate a list of tasks that audit your data for completeness and consent compliance.

06 How does the system handle conflicting contact permissions?

The system applies a consent precedence logic where the highest-ranking role, such as a Medical Proxy, overrides permissions from lower-tier contacts.

07 Can I prepare data for multiple institutions at once?

Yes, you can use `'calculate_submission_sequence'` to organize multiple update packets into a logical order for submission.

08 How are annual reminders managed?

You can use `'generate_reminder_schedule'` to create a recurring calendar based on institutional deadlines and a preferred lead time.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
