Family Insurance Contact Sheet MCP

Centralize your family's insurance data for your AI agent.

Family Insurance Contact Sheet MCP gives your AI client direct access to your family's insurance landscape. It pulls together coverage summaries, provider contact info, policy details, and claim histories into one place. Instead of digging through emails or PDFs, you can just ask your agent for the specific details you need right now.

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Insurance Contact Sheet MCP

4 tools available

Cloud-hosted on Vinkius

Managing insurance for a whole family is usually a mess of scattered PDFs and forgotten login credentials. This MCP fixes that by giving your AI client a single point of entry to all your essential insurance data. You can stop hunting for renewal dates or provider phone numbers. Instead, you can ask your agent to pull up a coverage summary for a specific person or check the status of a recent claim. It acts as a bridge between your messy insurance files and your AI's reasoning capabilities. Whether you need to verify who is covered under a specific policy or find a provider's contact information, your agent handles the retrieval. It's about turning static insurance documents into actionable information you can query instantly.

Core Capabilities

01 — Coverage Auditing

Your agent checks what specific individuals are covered under existing plans.

02 — Provider Lookup

The AI finds contact information for insurance companies instantly.

03 — Policy Management

Your agent retrieves administrative details like renewal dates and covered members.

04 — Claim Tracking

The AI reviews the status and history of previous claims.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-insurance-contact-sheet — connect your AI agent in three steps.

- 01 Subscribe to the MCP on Vinkius.
- 02 Connect your preferred AI client like Claude or Cursor.
- 03 Ask your agent a question about your insurance.
- 04 The agent uses the MCP tools to pull the exact data you requested.

Get your insurance data into your AI workflow in minutes.

Built For

This is for anyone managing complex insurance needs for a household or group.

Family Managers

People handling insurance for multiple family members and dependents.

Personal Assistants

Professionals who need to quickly answer insurance questions for clients.

Small Business Owners

Owners managing basic coverage and claims for their staff.

What Changes When You Connect

- 01 Eliminates manual searching through insurance documents.
- 02 Provides instant access to provider contact info.
- 03 Centralizes claim history for easier tracking.
- 04 Gives your AI agent direct access to policy administrative data.

Real-World Applications

Emergency Contact Retrieval

Ask your agent for a provider's phone number during a medical event.

Claim Status Checks

Ask your agent for the status of a recent claim without logging into a portal.

Coverage Verification

Check if a specific family member is covered before a scheduled appointment.

Policy Audits

Review renewal dates and administrative details to avoid coverage gaps.

Patterns to Avoid

Manual document hunting

❌ AVOID

You spend twenty minutes digging through a folder of scanned PDFs to find a policy number.

✓ INSTEAD

Ask your agent to pull the specific policy information using ``get_policy_details`` instead.

Vague coverage questions

❌ AVOID

You ask your agent if anyone in the house has insurance.

✓ INSTEAD

Be specific about the person you are asking about and use ``get_coverage_summary`` to get a clear overview.

Guessing claim status

❌ AVOID

You assume a claim was processed because it has been a week since you filed it.

✓ INSTEAD

Use ``track_claims`` to get the actual history and current status of a specific claim.

The Right Fit

Connect this MCP if you manage insurance for a household, a group of dependents, or a small staff. Do not connect it if your insurance data is already organized in a searchable, digital database you use daily. The decision comes down to whether you are currently wasting time hunting through static PDFs and disconnected files.

Family Insurance Contact Sheet MCP Tools

These tools give your agent direct access to policy details, provider contact info, and claim histories.

#	TOOL	DESCRIPTION
01	get_coverage_summary	This tool provides a high-level overview of all active insurance coverage for a specific person.
02	get_policy_details	Use this to retrieve full administrative details for a specific insurance policy.
03	get_provider_directory	This tool lists all insurance providers and their contact information.
04	track_claims	This tool retrieves a history of claims associated with a specific policy or person.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

What insurance does John Doe have?

John Doe has two active policies: a Life Insurance policy (Policy #12345) and a Health Insurance policy (Policy #67890).

Find the contact details for BlueShield.

BlueShield can be reached at 555-0199 or via email at support@blueshield.com. Their website is <https://www.blueshield.com>.

Show me the claim history for policy #98765.

There is one claim recorded for policy #98765: Claim ID #CLM-001, which is currently in 'Processed' status.

Frequently Asked Questions

01 How do I connect this MCP to my AI?

You connect once through your AI client like Claude or Cursor using the credentials managed by Vinkius.

02 What kind of insurance data can my agent see?

Your agent can access coverage summaries, policy administrative details, provider contact info, and claim histories.

03 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use immediately.

04 Can I use this with Cursor or Windsurf?

Yes, this MCP works with any MCP-compatible client including Cursor and Windsurf.

05 Is my insurance data secure?

Vinkius manages the connection and hosting, providing a stable environment for your agent to access your data.

06 How can I see all insurance coverage for a specific family member?

You can use the `get\_coverage\_summary` tool by providing the person's full name to see their active policies.

07 Where can I find the contact information for my insurance provider?

Use the `get\_provider\_directory` tool to list all known providers and their contact details, or filter by a specific company name.

08 How do I check when a policy is due for renewal?

Provide the policy number to the `get\_policy\_details` tool to retrieve the renewal date and other administrative details.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
