Family Relocation Records Plan MCP

Keep your family moving without losing critical paperwork.

Family Relocation Records Plan MCP handles the logistical headache of moving documents. It helps you sequence transfers, check deadlines, and verify what specific organizations need so you don't miss a single requirement during a move.

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Relocation Records Plan MCP

4 tools available

Cloud-hosted on Vinkius

Moving a family involves more than just packing boxes. You have to manage a constant stream of sensitive documents, from school transcripts to medical records, and ensure they reach the right hands at the right time. This MCP acts as your relocation coordinator. You can use it to build a chronological timeline of every document that needs to move, ensuring nothing gets left behind in the old house. It helps you stay on schedule by checking your plan against actual moving dates, so you aren't scrambling for a birth certificate the day before you leave. Instead of guessing what a new school or doctor's office needs, you can ask your agent to pull the specific requirements for those organizations. It turns a chaotic pile of paperwork into a structured, actionable plan that your AI client can manage for you.

Core Capabilities

01 — Timeline Generation

Your agent creates a step by step sequence of document transfers based on your move date.

02 — Requirement Discovery

The AI identifies exactly what paperwork a specific recipient needs.

03 — Deadline Auditing

Your agent checks your plan to ensure all tasks are completed before you move.

04 — Plan Oversight

The AI provides a full summary of your relocation status at any time.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-relocation-records-plan — connect your AI agent in three steps.

- 01 Connect your preferred MCP client to Vinkius.
- 02 Provide your moving date and family details to your agent.
- 03 Use the tools to generate checklists and check requirements.
- 04 Monitor your progress through the relocation summary.

Connect your AI client to Vinkius and start managing your move immediately.

Built For

This MCP is built for anyone managing the logistics of a household move.

Relocation Coordinators

They hand off document sequencing and deadline tracking to the agent.

Heads of Household

They use the agent to keep track of family records and school requirements.

Personal Assistants

They use the tool to audit relocation plans for compliance.

What Changes When You Connect

- 01

Reduces the risk of missing critical document deadlines.
- 02

Centralizes document requirements for different organizations.
- 03

Creates a clear, chronological order for all paperwork transfers.
- 04

Provides instant status updates on the entire relocation plan.

Real-World Applications

School Enrollment

Ask the agent to find out what transcripts and health records a new school needs.

Medical Record Transfers

Use the checklist tool to ensure vaccination records reach the new clinic on time.

Moving Schedule Audits

Check if your current document plan will be finished before your scheduled moving day.

Relocation Overview

Get a quick summary of all pending document tasks during a busy move.

Patterns to Avoid

Manual document tracking

❌ AVOID

You try to keep a running list of school and medical records in a messy spreadsheet or a notebook.

✓ INSTEAD

Use ``generate_transfer_checklist`` to build a structured, chronological sequence of every document transfer you need to complete.

Guessing recipient needs

❌ AVOID

You assume the new doctor's office only needs immunization records and skip the rest.

✓ INSTEAD

Run `'find_recipient_requirements'` to identify the exact paperwork required by a specific organization before you start packing.

Ignoring moving deadlines

❌ AVOID

You realize on moving day that you forgot to request a transcript from the old school.

✓ INSTEAD

Use `'validate_deadline_compliance'` to check if your current plan actually fits within your scheduled moving dates.

The Right Fit

Connect this MCP if you are managing a household move that involves multiple school or medical transfers. Do not use it if you are only moving a single person with no document requirements. The decision depends on whether you have a complex web of recipients that need specific paperwork.

Family Relocation Records Plan MCP Tools

These tools manage your document timelines and verify that every recipient gets the specific records they need.

#	TOOL	DESCRIPTION
01	find_recipient_requirements	Use this to identify the specific types of records a particular organization requires.
02	generate_transfer_checklist	This tool creates a chronological sequence of all necessary document transfers.
03	get_relocation_summary	This tool provides a high-level overview of your entire relocation plan.
04	validate_deadline_compliance	This tool checks if your relocation plan stays within your required time constraints.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U Generate a transfer checklist for my family moving on 2025-06-01.

1. Birth Certificate to City Hall by 2025-05-15. 2. Vaccination Records to New Clinic by 2025-05-20.

U Is my relocation plan compliant with the moving date of 2025-08-15?

The plan is compliant. All document deadlines are set before the moving date, and there are no overdue actions.

U What documents does the local school require?

The local school requires immunization records, previous transcripts, and proof of residency.

Frequently Asked Questions

01 How does this MCP help with moving?

It manages the document side of a move by creating checklists, checking deadlines, and finding what organizations require.

02 Can I use this with Claude?

Yes, you can connect this MCP to any MCP-compatible client like Claude, Cursor, or Windsurf.

03 Does it track my deadlines?

Yes, the validation tool checks your plan to ensure all document transfers happen before your move date.

04 How do I know what a school needs?

You can use the recipient requirements tool to identify the specific records an organization asks for.

05 Do I need to host this myself?

No, Vinkius hosts and manages the MCP for you, so it is ready to use once you connect.

06 How do I generate a sequence of actions?

You can use the `generate\_transfer\_checklist` tool to create a chronological list of document transfers ordered by their deadlines.

07 Can I check if my relocation plan is feasible?

Yes, the `validate\_deadline\_compliance` tool checks if your document deadlines align with your scheduled moving date.

08 How do I see the total scope of my move?

Use the `get\_relocation\_summary` tool to get a high-level overview of family members and destination details.
