Family Reunification Plan MCP

Organize your household emergency response and contact hierarchies.

Family Reunification Plan MCP helps you build a structured emergency response for your household. Your AI client can generate printable reunification cards, organize contact trees, assign specific emergency roles to family members, and set up regular practice drill schedules to ensure everyone knows the plan when it matters.

A+ Quality Score 100/100

preparedness

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Reunification Plan MCP

4 tools available

Cloud-hosted on Vinkius

When an emergency hits, you don't want to be guessing who to call or where to meet. This MCP gives your AI client the tools to turn messy household details into a structured preparedness plan. You can move from a list of phone numbers to a logical contact tree that shows exactly who communicates with whom. Instead of vague ideas, you get printable cards that list meeting points and authorized pickups for your kids or elderly relatives. You can also use your agent to assign specific responsibilities to family members, like a logistics lead or a communication lead, so everyone has a job. To make sure the plan actually works, you can have your AI generate drill schedules to practice these movements regularly. It's about turning abstract safety ideas into actionable, repeatable steps for your family.

Core Capabilities

01 — Contact Hierarchy

Your agent organizes family members into a logical communication tree.

02 — Role Assignment

The AI assigns specific emergency responsibilities to different household members.

03 — Printable Assets

Your client generates concise reunification cards for physical use.

04 — Drill Planning

The MCP creates structured schedules to practice emergency procedures.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-reunification-plan — connect your AI agent in three steps.

- 01 Connect your MCP-compatible client to Vinkius.
- 02 Provide your family contact details and roles to your AI agent.
- 03 Ask the agent to build a contact tree or assign roles.
- 04 Request printable reunification cards or a drill schedule.
- 05 Use the generated assets for your household preparedness.

Connect your client to Vinkius and start building your plan through natural conversation.

Built For

This is for heads of households and safety coordinators who want to move beyond basic checklists into structured planning.

Parents

They use the AI to create reunification cards and role assignments for their children.

Safety Coordinators

They use the tool to build contact trees and drill schedules for larger groups.

Emergency Planners

They use the MCP to formalize household response protocols.

What Changes When You Connect

- 01 Turns scattered contact info into a structured hierarchy.
- 02 Creates physical assets like reunification cards for quick access.

-
- | | |
|-----------|--|
| 03 | Assigns clear responsibilities to prevent confusion during a crisis. |

| 04 | Establishes regular practice through automated drill scheduling. |
-

Real-World Applications

School/Work Reunification

Create cards that list specific meeting points for kids at school or adults at work.

Communication Management

Build a contact tree to ensure the right people are notified in the right order.

Responsibility Mapping

Assign specific roles like Logistics Coordinator to family members to ensure tasks are covered.

Preparedness Drills

Generate a schedule to run monthly practice drills for your family's emergency plan.

Patterns to Avoid

Vague emergency planning

❌ AVOID

You tell your agent to make a general plan for when things go wrong. This results in a list of ideas that don't actually help anyone move or communicate.

✓ INSTEAD

Use `build_contact_tree` to turn those ideas into a logical communication flow that everyone can follow.

Relying on digital-only info

❌ AVOID

You keep all your meeting points and pickup details in a chat history. If your phone dies during a crisis, you have no way to access the plan.

✓ INSTEAD

Run `generate_reunification_card` to create physical, printable summaries you can keep in a backpack or car.

Static, unused protocols

❌ AVOID

You write down a plan once and then never look at it again until an actual emergency happens.

✓ INSTEAD

Use `create_drill_schedule` to set up regular practice sessions so the plan becomes muscle memory.

The Right Fit

Connect this MCP if you manage a household or group that needs a formal response protocol. Do not connect it if you only want a simple list of phone numbers. The decision depends on whether you need a structured system of roles and drills rather than just a digital address book.

Family Reunification Plan MCP Tools

These tools turn scattered household contact info into a structured, actionable emergency response system.

#	TOOL	DESCRIPTION
01	assign_emergency_roles	This tool maps specific family members to critical emergency roles.
02	build_contact_tree	This tool organizes your household contacts into a logical, hierarchical communication flow.
03	create_drill_schedule	This tool generates a structured plan for practicing your family's reunification procedures.
04	generate_reunification_card	Use this to create a concise, printable summary containing your essential reunification data.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Create a reunification card for my family with our home at 123 Maple St, school at West Elementary, and work at Downtown Corp. Our meeting points are the local park, the community center, and the library in the next city.

Your reunification card is ready. Primary Location: Local Park (123 Maple St area). Secondary Location: Community Center. Tertiary Location: City Library. Authorized Pickups: Mom, Dad.

- U** Help me assign emergency roles for my family members: Alice, Bob, and Charlie. I need a Communication Lead and a Logistics Coordinator.

Roles assigned: Alice is the Communication Lead, and Bob is the Logistics Coordinator. Charlie remains unassigned.

- U** Build a contact tree for my household. Contacts are: Alice (ID: 1, Role: Lead, Backup: Bob), Bob (ID: 2, Role: Support, Backup: Alice), and the coordinator is Alice.

Contact tree successfully built with Alice as the root coordinator and Bob as the primary backup.

Frequently Asked Questions

01 What can this MCP do for my family?

It allows your AI client to build contact trees, assign emergency roles, create printable reunification cards, and schedule practice drills.

02 Which AI clients can I use with this MCP?

You can use this MCP with any compatible client like Claude, Cursor, Windsurf, or VS Code.

03 How do I get the reunification cards?

You ask your AI agent to generate a card using the ``generate_reunification_card`` tool, and it will provide a concise summary you can print.

04 Can I organize my contacts into a hierarchy?

Yes, you can use the ``build_contact_tree`` tool to organize your household contacts into a logical communication flow.

05 Do I need to host the MCP myself?

No, Vinkius hosts and manages the MCP for you. You just connect your client and start using the tools.

06 What is a reunification card?

A reunification card is a concise, printable summary of essential data like meeting locations and authorized contacts, created using ``generate_reunification_card``.

07 How do I ensure my communication chain works?

You can use ``build_contact_tree`` to organize your household contacts into a logical hierarchy with designated backups to prevent communication gaps.

08 Can I schedule regular practice drills?

Yes, the ``create_drill_schedule`` tool generates a structured plan for practicing reunification procedures based on your preferred frequency.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT
