

MCP SERVER

NO CODE

CLOUD HOSTED

Family Visitor Information Pack MCP

Turn messy household notes into organized guest guides.

Family Visitor Information Pack MCP helps you organize house rules, contact info, and safety notes into clean Markdown documents. Instead of sending long, unorganized texts to guests, your AI client can pull from your household data to build complete visitor guides or quick emergency summaries in seconds.

A+ Quality Score 100/100

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Family Visitor Information Pack MCP

4 tools available

Cloud-hosted on Vinkius

Managing a household means keeping track of a dozen little details that guests always seem to ask about. Where is the spare key? How does the coffee machine work? What is the Wi-Fi password? This MCP solves that by letting your AI client act as a personal household coordinator. You provide the raw data, and the MCP handles the heavy lifting of structuring it into something readable and professional.

You can use it to build a full Markdown guide for long-term guests or just a tiny, high-priority safety brief for someone staying the night. It keeps your information consistent and ensures you don't forget critical details like emergency contacts or safety hazards. Since it works with any MCP-compatible client, you can just chat with your agent to get the exact document you need, exactly when you need it.

Core Capabilities

01 — Document Assembly

Your AI client uses this to combine disparate notes into a single Markdown file.

02 — Data Validation

The MCP checks your input to make sure no critical information is missing before generating a guide.

03 — Targeted Information Retrieval

Your agent can pull specific details like Wi-Fi passwords or appliance instructions from your data.

04 — Emergency Summarization

The tool strips away non-essential info to create a fast-reading safety brief.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/family-visitor-information-pack — connect your AI agent in three steps.

- 01 Connect the MCP to your preferred AI client via Vinkius.
- 02 Provide your household data, including contacts, routines, and safety notes.
- 03 Ask your AI client to assemble a full guide or a specific summary.
- 04 Receive a formatted Markdown document ready to send or print.

Setting up this MCP is a one-time process that gives your AI client immediate access to your household data.

Built For

This is for anyone managing a home, rental property, or shared living space who wants to automate guest communication.

Short-term Rental Hosts

Hand off guest instructions and house rules to the AI to create consistent welcome guides.

Family Organizers

Use it to prep visiting relatives with everything they need to know about the house.

Property Managers

Generate standardized safety and contact briefs for different properties or tenants.

What Changes When You Connect

- 01 Converts raw notes into structured Markdown documents.
- 02 Reduces repetitive questions from guests by providing clear instructions.

-
- 03 Ensures safety information is easily accessible in a condensed format.
-
- 04 Validates data integrity to prevent incomplete guides.
-

Real-World Applications

Airbnb Welcome Guides

Turn your list of house rules and amenities into a professional guide for every new guest.

Emergency Preparedness

Create a quick-access safety sheet for babysitters or house guests.

House Sitting Instructions

Provide pet owners or house sitters with a clear list of routines and contact numbers.

Information Lookup

Ask your AI client where specific household items are located without digging through notes.

Patterns to Avoid

Skipping the data check

❌ AVOID

You try to build a guest guide immediately after typing a few scattered notes about the Wi-Fi and the spare key.

✓ INSTEAD

Run ``validate_household_data`` first to make sure you haven't missed critical details like emergency contacts.

Overwhelming guests with data

❌ AVOID

You send a twenty page Markdown file containing every single detail about your home to a babysitter staying for two hours.

✓ INSTEAD

Use ``format_emergency_brief`` to strip away the fluff and give them only the high-priority safety info they actually need.

Manual document searching

❌ AVOID

You spend ten minutes digging through old emails and notebooks to find the specific instructions for the coffee machine.

✓ INSTEAD

Just ask your AI client to `query\_household\_info` to pull that specific detail instantly from your dataset.

The Right Fit

Connect this MCP if you manage a rental property or a busy household and want to stop answering the same guest questions. Do not connect it if you only host guests once a year and prefer manual communication. The deciding factor is whether you have enough recurring household data to make automation worth the setup.

Family Visitor Information Pack Tools

These tools transform messy household notes into structured guides and quick-access safety briefs.

#	TOOL	DESCRIPTION
01	format_emergency_brief	This tool creates a condensed, high-priority summary focused strictly on safety and contact details.
02	assemble_visitor_pack	This tool pulls all your household data together to generate a final, formatted Markdown document for guests.
03	query_household_info	This tool lets your AI client search for specific pieces of information within your household dataset.
04	validate_household_data	This tool checks your data modules to ensure they are complete and follow the required format before you build a guide.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Generate a complete visitor pack with these contacts: [{ 'name': 'Alice', 'relationship': 'Host', 'phone': '555-0101' }], access: 'Use the keypad code 1234', routines: [], safety: [], essentials: [], departure: []

Welcome & Access

Use the keypad code 1234.

People & Contacts

- Alice (Host): 555-0101

- U** I need a quick emergency summary for these safety notes: [{ 'hazard': 'Loose rug', 'location': 'Hallway', 'instruction': 'Watch your step' }] and contacts: [{ 'name': 'Bob', 'relationship': 'Emergency', 'phone': '555-0202', 'is_emergency': true }]

Safety

- Loose rug (Hallway): Watch your step

Emergency Contacts

- Bob (Emergency): 555-0202

- U** Search for 'coffee' in the essentials category.

The coffee is located in the kitchen pantry on the second shelf.

Frequently Asked Questions

01 What format are the visitor guides in?

The guides are generated as Markdown documents, making them easy to read, copy, or print.

02 Can I use this with Claude or Cursor?

Yes, this MCP works with any MCP-compatible client, including Claude, Cursor, and Windsurf.

03 How do I create a quick safety summary?

You can ask your AI client to use the `format_emergency_brief` tool to create a condensed list of safety and contact info.

04 Does the MCP host the data?

Vinkius hosts the MCP and manages the connection, allowing your AI client to interact with your data through the provided tools.

05 What happens if my household data is incomplete?

You can use the `validate_household_data` tool to check if your information meets the required schema before you try to build a guide.

06 How do I create the final document?

Use the ``assemble_visitor_pack`` tool by providing the necessary data modules like contacts, routines, and safety notes.

07 Can I get a quick summary for emergencies?

Yes, use the ``format_emergency_brief`` tool to generate a condensed, mobile-friendly summary of safety and contact information.

08 How can I verify my data is correct?

You can use ``validate_household_data`` to check the integrity and completeness of individual data modules before assembly.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.

YOUR MCP ENDPOINT

`https://edge.vinkius.com/[TOKEN]/mcp`

CLIENT	WHERE TO CONFIGURE
