Festival Group Planner is your logistics coordinator.

Keep your entire festival crew synchronized and on schedule.

Festival Group Planner acts as a central hub for your group's festival logistics. It lets your AI agent handle the heavy lifting of scheduling meeting points, splitting shared costs, and managing group responsibilities. Instead of digging through group chats, you use your AI client to coordinate tickets, lodging, and daily itineraries in one place.

SCAN TO VIEW

The connectivity layer between AI and the world's software.

Vinkius sits between AI and every application. All communication passes through Vinkius Cloud via the Model Context Protocol (MCP) — with governance, observability, and security at every layer.

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the connectivity layer where AI connects to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Festival Group Planner MCP

5 tools available

Cloud-hosted on Vinkius

Planning a music festival trip with a large group usually means endless group chats and messy spreadsheets. This MCP changes that by giving your AI agent direct control over your group's logistics. You can stop manually calculating who owes what for dinner or trying to remember where everyone agreed to meet.

When you connect this MCP to your AI client, you can simply tell your agent to set up a schedule or track a shared expense. It handles the organization of meeting times, the distribution of tickets or lodging, and the assignment of group duties. Whether you're coordinating transport seats or just making sure everyone knows when the next set starts, your agent uses these tools to keep the group's plan updated and accurate. It turns your AI into a dedicated trip manager that keeps everyone on the same page from the moment you arrive until you head home.

Core Capabilities

01 — Schedule Coordination

Your agent uses this to align meeting points and time slots for the group.

02 — Expense Management

Your agent tracks shared costs to ensure everyone pays their fair share.

03 — Resource Distribution

Your agent assigns tickets, lodging, or transport seats to group members.

04 — Duty Assignment

Your agent manages and tracks specific responsibilities or shifts within the group.

05 — Logistics Overview

Your agent pulls a high-level status report of all current group logistics.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/en/ai-agent-connect/festival-group-planner — connect your AI agent in three steps.

- 01 Connect your preferred MCP-compatible client to Vinkius.
- 02 Select the Festival Group Planner MCP from the catalog.
- 03 Give your AI agent a command to plan a schedule or track a cost.
- 04 The agent executes the specific tool to update your group's logistics.

Getting your group organized is a matter of connecting your agent to the Vinkius-hosted MCP.

Built For

This MCP is built for anyone organizing group travel for large-scale events.

Group Organizers

People who want to hand off the tedious task of tracking expenses and schedules to an AI.

Festival Attendees

Users who need a quick way to check meeting points or duty shifts via their AI client.

Travel Coordinators

Individuals managing shared resources like lodging and transport for multiple people.

What Changes When You Connect

- 01 Centralizes all trip logistics into a single interface.
- 02 Automates the math for splitting shared festival costs.
- 03 Keeps group members synchronized through coordinated schedules.
- 04 Reduces the need for constant manual updates in group chats.

Real-World Applications

Splitting Dinner Bills

Your agent records a meal cost and automatically calculates the individual shares for the group.

Coordinating Meeting Spots

You use the agent to set specific times and locations for the group to regroup between sets.

Managing Shared Lodging

The agent assigns specific lodging spots or transport seats to different members of the group.

Assigning Group Tasks

You delegate specific duties, like food runs or gear management, to different people in the group.

Patterns to Avoid

Manual Math in Chat

❌ AVOID

You type out a long list of everyone's dinner costs in a group chat and try to calculate the split yourself.

✓ INSTEAD

Let your agent handle the math by using ``track_expenses`` to record costs and keep the split fair.

Vague Meeting Plans

❌ AVOID

You tell your friends to meet up at the main stage sometime after the headliner finishes.

✓ INSTEAD

Use ``plan_itinerary`` to set specific meeting points and time slots so the group stays synchronized.

Unorganized Resource Handouts

❌ AVOID

You text a list of who has which ticket or sleeping spot and hope nobody loses track.

✓ INSTEAD

Use ``allocate_resources`` to assign tickets, lodging, or transport seats directly to group members.

The Right Fit

Connect this MCP if you are organizing travel for a large group attending a music festival. Do not connect it if you are traveling solo or in a tiny group where a simple text message works fine. The deciding factor is the complexity of your group's shared responsibilities and costs.

5 Essential Tools for Managing Festival Group Logistics

These tools give your agent the ability to handle everything from shared costs to group schedules and resource distribution.

#	TOOL	DESCRIPTION
01	allocate_resources	This tool handles the distribution of physical assets. Use it to assign tickets, transport seats, or lodging spots to specific group members.
02	get_group_status	This tool provides a high-level overview of your group's current logistics. It gives your agent a snapshot of the entire trip's status.
03	manage_shifts	This tool manages group responsibilities. You can use it to assign and track specific duties among your friends.
04	plan_itinerary	This tool coordinates the group's schedule. It aligns meeting points and time slots to keep everyone in sync.
05	track_expenses	This tool records shared costs. It ensures that financial distributions stay fair by tracking what everyone has paid.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

- U** Plan an itinerary for group 'fest-2024' on July 15th with meeting points at 'Main Stage' and 'Food Court'.

The itinerary for July 15th is set: 12:00 PM at Main Stage for the opening ceremony, and 3:00 PM at Food Court for lunch.

- U** Assign a food duty shift to Alex from 2:00 PM to 4:00 PM for group 'fest-2024'.

Shift assigned: Food duty for Alex is scheduled from 2:00 PM to 4:00 PM.

- U** Record a \$50 expense for 'Dinner' paid by Sam, to be split among Sam, Jo, and Bo for group 'fest-2024'.

Expense recorded: \$50 for Dinner. Individual shares are \$16.67 for Sam, Jo, and Bo.

Frequently Asked Questions

01 How do I use this MCP with my AI client?

You connect your client, such as Claude or Cursor, to Vinkius. Once connected, your agent can immediately start using the festival planning tools.

02 Can this MCP help me split costs with friends?

Yes. You can use the `track_expenses` tool to record a payment and have your agent calculate how much each person owes.

03 Does this work for scheduling meeting times?

Yes. The `plan_itinerary` tool allows your agent to coordinate specific time slots and meeting points for your group.

04 What kind of resources can I allocate?

You can use the `allocate_resources` tool to distribute things like tickets, transport seats, or lodging spots.

05 Do I need to host the MCP myself?

No. Vinkius hosts and manages the MCP for you, so it is ready to use as soon as you connect your client.

06 How can I see the current group spending?

You can use the `'get_group_status'` tool to receive a snapshot of total spending and group logistics.

07 Can I assign specific tasks to group members?

Yes, the `'manage_shifts'` tool allows you to assign responsibilities like food duty or gear security to specific members.

08 How do we split the cost of a shared taxi?

Use the `'track_expenses'` tool to record the total amount and list all members who should share the cost.

Go Live in 60 Seconds

Get your connection token from cloud.vinkius.com, then paste the endpoint URL into any MCP-compatible client.
