

MCP SERVER

NO CODE

CLOUD HOSTED

FirstPromoter MCP

Manage referrals, track leads, and process payouts instantly.

FirstPromoter manages your entire affiliate ecosystem—from tracking initial sign-ups to processing payouts. This MCP lets you automate promoter management, monitor conversions in real time, and issue manual rewards without leaving your AI chat window.

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

FirstPromoter MCP

12 tools available

Cloud-hosted on Vinkius

Running a referral program shouldn't mean jumping between five different dashboards just to see who's paying the bills. Connect FirstPromoter via Vinkius to let your agent handle the heavy lifting. You can manage all of your affiliates, check performance metrics, and even create new promoter profiles using simple conversation prompts. Need to know which leads are converting? Your agent monitors incoming leads and shows you exactly who is driving value. Want to pay out commissions? List rewards or manually add a commission for any specific affiliate. Whether you need campaign insights, detailed reports on revenue, or just the total count of pending payouts, your AI client pulls it all together instantly.

Core Capabilities

01 — Manage Affiliate Profiles

The agent can list existing affiliates and create new promoter profiles for your system.

03 — Calculate Payout Statuses

The system provides high-level reports on total paid amounts versus pending payouts across your network.

05 — Generate Performance Reports

The agent pulls detailed reports on both individual promoters and entire affiliate campaigns.

02 — Track Lead and Conversion Data

You get real-time lists of incoming leads and all tracked conversions, helping pinpoint top performers.

04 — Process Rewards and Commissions

You can list all rewards and manually create new commissions for specific promoters.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/firstpromoter — connect your AI agent in three steps.

- 01** Subscribe to this MCP through the Vinkius Marketplace, then provide your FirstPromoter API Key and Account ID.
- 02** Your AI client accesses the data using your credentials, allowing you to request specific information or actions via natural conversation.
- 03** The agent processes the request, pulls the relevant data from FirstPromoter, and presents clear, actionable reports directly in the chat.

The bottom line is, you get a single conversational window into your entire affiliate marketing back end.

Built For

This MCP serves Affiliate Managers and SaaS Founders who spend too much time cross-referencing data across multiple platforms. If you're tired of logging into the dashboard just to check a payout total, this is for you.

Affiliate Manager

Quickly checking promoter stats or manually issuing rewards while reviewing program performance.

SaaS Founder

Getting a quick overview of referral revenue and top-performing campaigns using simple AI commands without needing a data scientist.

Marketing Operations Specialist

Automating the gathering of conversion, lead, and performance data needed for internal marketing reports.

What Changes When You Connect

- 01** Check top affiliate performance instantly. Instead of running a dashboard report just to find out who's doing well, ask the agent to generate a promoter report or list the best earners right away.

-
- 02 Streamline reward processing. You can manually create rewards for specific promoters using the `create_reward` tool, bypassing tedious internal forms when someone deserves an immediate commission payout.

 - 03 Maintain visibility into every lead. The agent monitors incoming leads and conversions by listing all leads or all conversions, keeping your marketing and finance teams perfectly aligned on revenue sources.

 - 04 Review program status fast. Get a high-level view of money movement by requesting payout statistics. You immediately know the total paid versus how much is still pending approval.

 - 05 Understand campaign health at a glance. Use `list_campaigns` to see all active programs, and then `get_campaign_report` for deep insights into which campaigns are actually generating revenue.
-

Real-World Applications

Identifying the best promoters by revenue.

The founder needs to know who drove the most sales last quarter. They ask their agent, 'List my top 10 promoters by revenue.' The agent retrieves this data and shows them the names and total earnings without needing a spreadsheet or database query.

Auditing recent conversions.

The marketing team notices an unusual spike in activity and needs immediate verification. They ask the agent to 'list all conversions' or use `get_lead` to check specific lead details, verifying the source of revenue instantly.

Handling an immediate commission payout.

An affiliate hits a milestone but the payment system is slow. Instead of waiting, the manager simply prompts the agent to 'Create a new reward of \$50.00 for promoter ID X.' The agent issues the commission immediately.

Checking overall financial health.

The finance team needs a quick snapshot before closing books. They prompt the agent for payout statistics; it delivers the total paid and total pending amounts in one response.

Patterns to Avoid

Relying on single reports.

X AVOID

Only running `get_promoter_report` gives a partial picture, making it hard to compare performance across different campaigns or time periods.

✓ INSTEAD

To see the full context, start by listing all campaigns using `list_campaigns`, then run `get_campaign_report` for each one. This gives you a 360-degree view of your affiliate health.

Copying data manually.

X AVOID

Exporting lead lists and copy-pasting conversion data into a spreadsheet takes hours, and the data often gets mismatched or outdated.

✓ INSTEAD

Just ask the agent to `list_leads`. It retrieves all current leads directly into your chat interface, saving you from manual data entry entirely.

Missing commission details.

X AVOID

Only seeing a high total payout number without knowing who owes what or which rewards are pending makes reconciliation impossible.

✓ INSTEAD

Always use `list_rewards` to see every reward, and combine that with `get_payout_stats` for the full picture of financial liability.

The Right Fit

Use this MCP if your core pain point is operational: you need to manage, track, or report on affiliate activity. Specifically, use it when you need to list promoters (`list_promoters`), review conversions (`list_conversions`), or process rewards manually (`create_reward`). Don't use this if you just need general business intelligence; for example, if you only need a single person's name, using `get_promoter` is efficient. However, if your goal is to understand the relationship between leads and conversions across multiple campaigns, you must combine `list_leads` with `list_conversions`. If your workflow involves complex external data manipulation (like integrating it with a CRM that isn't focused on marketing), you might need an alternative system, but for pure affiliate management, this MCP covers everything.

The headache of checking affiliate performance across multiple platforms.

Right now, tracking your referral program is a mess. You have to open the dashboard, filter by date range, pull promoter reports one by one, then switch over to the leads page just to see if they converted. Then you copy those numbers into a spreadsheet to calculate total payouts and send them for approval. It's hours of clicking through tabs.

With this MCP, the process shifts entirely. Instead of manual data gathering, you simply ask your agent what you need—like listing all conversions or generating a promoter report. You get clean, actionable data delivered instantly in conversation. No clicks required.

FirstPromoter MCP: Get full control over affiliate rewards.

Manual processes force you to wait for the payment system, requiring multiple approvals and manual entries just to issue a simple commission. You're stuck waiting for backend jobs to finish before rewarding your team's top contributors.

Now, using `create_reward`, you bypass that bottleneck entirely. You talk to the agent, and the reward is added instantly—it changes the speed of your entire operation.

FirstPromoter: 12 Tools for Marketing Automation

These tools let your agent perform specific actions like listing promoters, creating commissions, or pulling campaign reports directly from FirstPromoter.

#	TOOL	DESCRIPTION
01	<code>create_promoter</code>	Adds a brand new affiliate account to your system.
02	<code>create_reward</code>	Manually adds a commission reward for an existing promoter.
03	<code>get_campaign_report</code>	Retrieves the full performance metrics for a specific affiliate campaign.
04	<code>get_lead</code>	Fetches the detailed information of a single incoming lead.
05	<code>get_payout_stats</code>	Provides an overview showing total paid and pending commission amounts.
06	<code>get_promoter_report</code>	Generates a comprehensive performance report for one specific promoter.
07	<code>get_promoter</code>	Retrieves the basic details of an affiliate by their ID.
08	<code>list_campaigns</code>	Lists all active and past affiliate campaigns running in your program.
09	<code>list_conversions</code>	Displays a list of every conversion that has occurred in the system.
10	<code>list_leads</code>	Shows all incoming leads recorded by your affiliate program.
11	<code>list_promoters</code>	Retrieves a list of every active and inactive promoter account in the system.
12	<code>list_rewards</code>	Lists all commission rewards that have been issued or are pending.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List my top 10 promoters by revenue.

Retrieving top promoters... I found your top 10 affiliates, led by 'John Doe' (\$5,400 revenue) and 'Jane Smith' (\$4,200 revenue). Would you like the full details for any of them?

U Show me the payout stats for this month.

Fetching payout statistics... Total paid this month: \$12,500. Total pending payouts: \$3,200. There are currently 15 promoters awaiting payment approval.

U Create a new reward of \$50.00 for promoter ID 'prom_456'.

Reward created! I've manually added a commission of \$50.00 (5000 cents) to promoter ID 'prom_456'. The reward is now pending in their account.

Frequently Asked Questions

01 Can FirstPromoter MCP list all my promoters?

Yes. The agent can use `list_promoters` to retrieve a comprehensive roster of every affiliate in your system, whether they are active or dormant.

02 How do I check if there are pending payments using FirstPromoter MCP?

You ask the agent to `get_payout_stats`. This immediately provides a high-level overview showing exactly how much money is paid versus what total amount is still waiting for approval.

03 Does FirstPromoter MCP track leads and conversions?

It does. You can `list_leads` to see all incoming sign-ups, or use `list_conversions` to review every successful conversion that has occurred through the program.

04 What if I need a detailed report for one promoter? Should I use `get_promoter_report`?

Yes. Use `get_promoter_report` when you want deep, specific metrics on just one affiliate's performance, isolating their revenue and activity history.

05 How do I create a reward for an affiliate using FirstPromoter MCP?

You use the `create_reward` tool. You simply tell your agent to 'create a new reward of [amount] for promoter ID [ID]', and it handles the commission creation.
