

MCP SERVER

NO CODE

CLOUD HOSTED

Fusebill Billing MCP

Manage the entire customer billing lifecycle.

Fusebill (Enterprise Subscription Billing API) automates complex billing operations directly through your AI agent. Manage customer records, track subscriptions, and control the full billing lifecycle—from creation to cancellation—without leaving your chat window. Use this MCP to handle all enterprise subscription management tasks.

saas-billing

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeytoken Trap System

Phantom credentials are injected into isolated environments. If a honeytoken is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Fusebill (Enterprise Subscription Billing API) MCP

7 tools available

Cloud-hosted on Vinkius

This connector lets you manage an entire company's subscriber base using natural conversation. Instead of logging into the Fusebill dashboard or running multiple reports, your AI agent interacts directly with your billing data. You can use it to list and retrieve customer profiles, checking things like email addresses and currency settings on demand. Need to change a subscription? Your agent handles that too, allowing you to activate new customers or cancel old ones instantly. It also lets you query both active and historical subscriptions, giving immediate visibility into your recurring revenue stream. Because this MCP is hosted on Vinkius, all your billing data becomes one accessible point for any compatible AI client, keeping your workflow tight and focused.

Core Capabilities

01 — Manage Customer Records

Create, retrieve details for, list, or modify the status of entire customer accounts.

02 — Track Subscription Statuses

Get current and historical information about any subscription plan, including billing cycle details.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/fusebill-enterprise-subscription-billing-api — connect your AI agent in three steps.

- 01** Subscribe to this MCP on Vinkius and provide your Fusebill API key.
- 02** Your AI client connects using the credentials to access all customer and subscription data.
- 03** You tell your agent what you need—like 'list all customers in USD' or 'check my billing for X ID'—and it executes the action.

The bottom line is, your AI agent treats your entire Fusebill account like a conversational database.

Built For

This MCP is essential for Finance Operations staff and Customer Success managers who spend too much time clicking through separate billing portals just to answer a customer's basic question. It's for anyone whose job involves knowing the current status of an account without manually running multiple reports.

Customer Success Manager

Retrieves instant subscription details or checks if a client needs to be activated before support can proceed.

Billing Operations Specialist

Runs reports on customer lists and manages the lifecycle of accounts, such as cancelling an old record or activating a new one.

Developer

Integrates live billing data into testing pipelines to verify user records before deployment.

What Changes When You Connect

- 01** Stop switching dashboards. You can now use your AI agent to handle account setup, like using `create_customer`, without you lifting a finger on external portals.

-
- 02** Get instant answers about revenue. Instead of manually running reports, ask your agent to `list_subscriptions` and see current recurring revenue figures immediately.
-
- 03** Manage accounts at scale. Use `list_customers` to pull batches of customer records for bulk review or data export in minutes.
-
- 04** Handle status changes easily. Need to close an old account? You can use `cancel_customer` directly through conversation, keeping the record clean.
-
- 05** Deep dive on any account. If you only have a partial ID, your agent can run `get_customer` and pull all required metadata for that user.
-

Real-World Applications

Onboarding a New Client

A Customer Success Manager needs to set up a brand new enterprise client. Instead of logging into Fusebill, they ask their agent to 'create a customer' with the required details. The agent processes the data and confirms the ID immediately, allowing the CSM to move straight to contract signing.

Pre-Cancellation Review

A client is questioning their bill. The team asks the agent to 'list all subscriptions' associated with that account's domain. This action pulls up historical data, showing when the service was active and what plans were used.

Auditing Account Status

The billing ops team needs to verify if a specific client was correctly moved from 'Trial' to 'Paid'. They simply ask their agent to `get_subscription`` for the ID, and the agent returns the current status ('Active') and plan details instantly.

Patterns to Avoid

Confusing Data Retrieval with Action

X AVOID

A user asks their agent to 'show me all my customers who owe money' but forgets that the MCP only handles billing status, not payment gateway reconciliation.

✓ INSTEAD

If you need specific financial metrics like outstanding invoices or payments processed through a bank, this MCP won't help. Stick to listing customer records using `list_customers` for billing eligibility checks.

Trying to Update Payment Details

X AVOID

A user tries to tell the agent, 'Change the payment card on file,' expecting an immediate update.

✓ INSTEAD

This MCP controls customer status and subscription plans. For changing actual payment details or credit cards, you must use your primary billing platform's dedicated UI.

The Right Fit

Use this if your core need is managing the lifecycle of a user account—creating it, activating it, checking its current plan status, or cancelling it. If you are dealing with basic customer metadata (name, email, currency), this MCP covers it. However, don't use this if you need to reconcile tax ledgers, generate GAAP compliant financial reports, or update payment gateway tokens; those require a dedicated accounting tool. This is purely for billing and operational account management.

The Billing Workflow Nightmare

Today, checking an enterprise client's status means jumping through three different portals: the CRM to get their contact info, the subscription dashboard to see what plan they are on, and then maybe logging into a third system just to confirm if

With this MCP, those steps vanish. Your agent talks directly to Fusebill's data layer. You ask for the status, and you get it back in a clean summary. It's like having the entire billing backend accessible via simple conversation.

that account is even active. You spend 80% of your time switching tabs and copy-pasting IDs.

Fusebill Billing MCP: Master Customer Accounts

You no longer have to manually run separate reports for customer lists or subscription statuses.

The agent can combine these actions; for example, it can 'list customers' and then immediately filter that list by the results of a `get_subscription` query.

It's not just about reading data. You gain control over the entire lifecycle—from using `create_customer` to executing `cancel_customer`. It gives your team true automation power.

Fusebill (Enterprise Subscription Billing API) 7 Tools

These tools let you manage every aspect of your billing operations—from creating new accounts to tracking detailed subscription histories—all through natural language instructions.

#	TOOL	DESCRIPTION
01	<code>activate_customer</code>	Changes a customer's status to active within Fusebill.
02	<code>cancel_customer</code>	Deactivates and cancels an entire customer record in the system.
03	<code>create_customer</code>	Adds a brand new customer account to Fusebill.
04	<code>get_customer</code>	Fetches all specific details for one identified customer by ID or criteria.
05	<code>get_subscription</code>	Retrieves the complete profile and status of a single subscription plan.
06	<code>list_customers</code>	Searches, filters, and returns paginated lists of multiple customer records.
07	<code>list_subscriptions</code>	Generates a filtered list of multiple subscriptions based on criteria like date or plan type.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all Fusebill customers with the first name 'Jessica'.

I've searched your records. I found 2 customers matching 'Jessica': Jessica Jones (ID: 44556) and Jessica Smith (ID: 77889). Would you like to see the full details for either of them?

U Get the details for subscription ID 987654.

Retrieving subscription 987654... This is an 'Active' subscription for 'Global Enterprise' plan, billing in USD. It is currently assigned to customer 'Tech Solutions Inc'.

U Create a new customer: Michael Scott, email michael@dundermifflin.com, currency USD.

Processing... Customer 'Michael Scott' has been successfully created with ID 102938. The primary email is set to michael@dundermifflin.com and currency is USD. Would you like to activate this customer now?

Frequently Asked Questions

01 Can I create a new customer directly through the AI?

Yes! Use the `create_customer` tool by providing the first name, last name, and optional details like email and currency. The agent will confirm the creation and return the new Customer ID.

02 How do I check the status of a specific subscription?

Simply provide the Subscription ID to the `get_subscription` tool. The agent will retrieve the full metadata, including its current status, plan details, and associated customer information.

03 Is it possible to cancel a customer's account using this integration?

Yes, the `cancel_customer` tool allows you to change a customer's status to 'Cancelled' using their unique Customer ID. This action is performed securely through the Fusebill API.
