

MCP SERVER

NO CODE

CLOUD HOSTED

Giftpack MCP

Manage gifting campaigns and recipient data via chat.

Giftpack MCP connects your AI agent directly to corporate gifting data, letting you manage employee recognition and client campaigns conversationally. Check recipient profiles, create new gift orders with specific budgets, track campaign status from draft through launch, and discover curated gift options for any individual—all without clicking a single dashboard button.

personalization

The infrastructure that powers AI agents in the real world.

Vinkius connects AI to the world's software through secure, enterprise-grade infrastructure — enabling real-world execution at scale, built on the Model Context Protocol (MCP).

Your AI Connections Run Through Vinkius Cloud

The world's largest
managed MCP catalog

Vinkius is the cloud infrastructure where AI agents connect to the software your business already runs. We handle the hosting, the security, the credentials, the uptime — you get agents that actually do things.

We operate the world's largest managed MCP catalog. Major SaaS platforms, CRMs, databases, and cloud providers — running, monitored, production-ready. This MCP server is hosted and maintained by the Vinkius Cloud for AI Agents.

The agent doesn't manage credentials, doesn't manage uptime, doesn't manage security. Vinkius does.

— Architecture principle

Four Pillars of the Vinkius Runtime

01 — Security by design

Credentials stay encrypted at rest via AES-256. The AI agent never touches raw keys — they're injected into a sandboxed V8 isolate at runtime. Actions are logged, and connections have an emergency kill switch.

03 — Deterministic observability

Eight immutable metrics per endpoint: request volume, p95 latency, error rate, active connections, cost attribution. A live payload feed logs every tool call with mutation detection.

02 — Built on MCP Fusion

This MCP server was built with **MCP Fusion**, the open-source framework (Apache 2.0) that powers the entire Vinkius catalog. Schema-as-firewall strips undeclared fields, compiled PII redaction runs at zero overhead, and cryptographic lockfiles produce git-diffable audit trails.

04 — Autonomous operations

Servers are deployed, monitored, and patched autonomously. New capabilities and security patches ship weekly. Zero-downtime deployments ensure continuous availability across all managed MCP servers.

AES-256

Encryption at rest

Ed25519

PKI vault signatures

24h TTL

Ephemeral session keys

V8 Isolate

Sandboxed execution

One Token. Instant Access.

Every MCP server on Vinkius is accessed through a **Connection Token**. Tokens are generated in the cloud dashboard and produce a unique MCP endpoint URL. Paste this URL into any MCP-compatible client — no SDK required.

A single token can serve **multiple AI clients simultaneously**, or you can issue separate tokens per client for granular access control. Each token tracks its own request count, last activity timestamp, and can be individually enabled or revoked.

Security Is the Architecture

Security in Vinkius is not a feature — it's the foundation of the runtime. The gateway enforces multiple independent protection layers between AI agents and third-party APIs.

01 — Ed25519 PKI Vault

Every workspace has an Ed25519 Master Key. Session keys are generated ephemerally (24h TTL) and signed by the Master Key. Credentials never leave the vault boundary.

02 — V8 Isolate Sandboxing

Tool code runs inside isolated-vm V8 isolates with 64 MB memory caps and per-request timeouts. No filesystem access, no network access except through the SSRF-guarded fetch bridge.

03 — SSRF Guard

All outbound HTTP requests are DNS-resolved and validated before execution. Private IP ranges (10.x, 172.16-31.x, 192.168.x, AWS metadata 169.254.x) are blocked at the network layer.

05 — Cryptographic Audit Trail

Every request is signed into a SHA-256 hash chain with Ed25519 signatures. Events form a tamper-proof, SIEM-exportable forensic record.

04 — DLP & PII Redaction

A ResponseGuard pipeline intercepts every tool response. Configurable redaction patterns strip sensitive fields (emails, SSNs, card numbers) before data reaches the AI agent.

06 — Honeypot Trap System

Phantom credentials are injected into isolated environments. If a honeypot is used outside Vinkius infrastructure, the server is quarantined instantly.

Emergency Kill Switch

EU AI Act Art. 14(1)
Compliant

The kill switch is an **emergency halt** mechanism — not a simple toggle. When triggered, it executes three actions atomically:

01 — Server deactivated

The MCP server is immediately taken offline across the entire cluster.

02 — All tokens revoked

Every connection token is invalidated. Total lockout — reconnection blocked until new tokens are issued.

03 — WebSocket connections killed

Active connections terminated via Redis pubsub broadcast. Propagates to every runtime node in the cluster.

Full Visibility. Zero Guesswork.

The Vinkius cloud dashboard includes a full MCP Governance suite — real-time analytics and security controls for production AI operations.

Control Plane

KPI dashboard with request volume, latency, success rate, token consumption, and AI-generated operational briefings.

FinOps

Cost tracking per tool, payload compression savings, budget optimization signals, and consumption trends.

Firewall & DLP

PII redaction activity, sensitive data protection counters, and security event timeline.

Agent Activity

Which AI clients are connecting, how often, and what they're doing — real-time session tracking.

Tool Health

Slowest and most error-prone tools, with actionable root-cause insights and performance baselines.

Incident Log

Error trends, failure rates, status-code breakdowns, and forensic audit trail access.

Giftpack MCP

12 tools available

Cloud-hosted on Vinkius

Managing corporate gifts usually means jumping between databases and complex dashboards just to check who needs an anniversary gift or if an order was processed. This MCP changes that. You connect your gifting data to any AI agent via Vinkius, giving your client the full power of Giftpack directly in chat. You can tell your agent to list all employees who hit a milestone this month, then ask it to create a campaign for them with a specific budget. It'll handle setting up that order and letting you know exactly what's needed next. The system curates perfect gifts based on recipient details; you just initiate the process by asking questions about members or orders. You can launch the entire campaign, modify budgets if things change, and track everything from start to finish—all through simple conversation.

Core Capabilities

01 — Manage Recipient Data

The agent can list all current recipients in your workspace or retrieve specific profile details for any member.

03 — Activate and Update Orders

Launch a configured gift campaign directly from your chat or modify an existing order's settings as needed.

05 — Track Gifting History

View details on existing campaigns or check the status of a gift order to see what's next in the process.

02 — Orchestrate Gifting Campaigns

You can start new gifting orders, setting budgets and assigning multiple recipients before the campaign is ready to go live.

04 — Curate Gift Options

Ask for suggestions by requesting the list of AI-curated gifts available for any specific person.

One Click on Vinkius — From Prompt to Execution

Available at vinkius.com/mcp/giftpack — connect your AI agent in three steps.

- 01** First, subscribe to this MCP through Vinkius and enter your Giftpack Workspace ID and API Key.
- 02** Next, tell your AI client exactly what you need—like 'List all employees who joined last quarter' or 'Create a campaign for Diwali with \$2000.'
- 03** The agent executes the commands using the available tools, presenting you with real-time data and actionable next steps right in your conversation.

The bottom line is that you treat complex HR operations like talking to a colleague who already knows where all the databases are located.

Built For

This MCP is built for Operations Managers and HR staff who spend too much time jumping between CRMs, gift catalogs, and internal dashboards just to manage employee recognition programs. If you're tired of manually checking campaign statuses or having to copy-paste recipient lists, this tool saves hours.

HR Operations Manager

Uses the MCP to check if an onboarding gift has been curated for a new hire, or quickly launch a group recognition campaign without manual dashboard navigation.

Customer Success Lead

Automates sending client appreciation gifts by asking the agent to create and track campaigns based on client tenure or project completion dates.

Executive Assistant

Gets a real-time overview of active gifting campaigns, checking order details and member statuses for multiple departments with simple commands.

What Changes When You Connect

-
- 01** You don't have to manually check campaign status. By calling `get_gifting_campaign_details`, your agent instantly tells you if an order is in 'Draft' or ready to launch.

 - 02** Onboarding new clients? Instead of logging into a separate portal, just tell the agent to `create_gifting_member` and it handles adding them to your database right away.

 - 03** Need gift ideas fast? Running `list_curated_gift_options` gives you immediate suggestions for a recipient based on their profile metadata. No browsing required.

 - 04** Running a big holiday event? You can start the process by calling `create_gifting_campaign`, setting budgets and assigning members without touching a dashboard.

 - 05** Mistakes happen; campaigns change. Use `modify_gifting_campaign` to update an order's budget or recipient list instantly from your chat interface.
-

Real-World Applications

Checking Annual Recognition Status

An HR Manager needs to know if the executive team's anniversary gifts are ready. They ask their agent, 'What's the status of the Q3 Anniversary Order?' The agent uses `get_gifting_campaign_details` and reports back: 'The order is configured with a \$50k budget and 12 recipients; I can launch it now.'

Bulk Campaign Setup

An Ops Manager needs to run a birthday campaign for 50 people. They ask the agent to `create_gifting_campaign`, specifying 'Birthday' using `list_gifting_milestones` and setting the budget before calling `list_campaign_receivers`.

Onboarding a New Client

A Customer Success Lead has just signed Acme Corp. They ask the agent to add them, triggering `create_gifting_member`. The agent successfully adds Acme and automatically suggests a welcome gift by calling `list_curated_gift_options`.

Adjusting an Existing Order

The original gift budget was too low. Instead of finding the campaign in a dashboard, the agent is asked to `modify_gifting_campaign`, increasing the budget and notifying the user that the change is logged.

Patterns to Avoid

Relying on multiple logins

X AVOID

The user opens Giftpack in their browser, then switches to a separate internal database just to check if the member exists before starting an order.

✓ INSTEAD

Don't manually cross-check. Use `list_gifting_members` first to verify all recipients exist within your MCP environment. This keeps everything contained.

Forgetting campaign scope

X AVOID

The user creates a new order but forgets which specific group or department the gifts are for, leading to manual re-scoping later.

✓ INSTEAD

Always use `list_campaign_receivers` before launching. This ensures your agent confirms that every person assigned to the order is exactly who you intended.

Overcomplicating a simple status check

X AVOID

The user tries to manually look through historical records to find out if an old campaign was paid for.

✓ INSTEAD

Use `list_gifting_campaigns` to pull up the history, and then `get_gifting_campaign_details` for the specific order ID to see its final status.

The Right Fit

You should use this MCP if your biggest pain point is coordinating complex, multi-step HR or client recognition processes that require data from a dedicated gifting platform. It's ideal when you need conversational access to member lists, budget management, and order tracking.

You shouldn't use it if your primary task is simple document storage or pure email communication; those are better suited for generic messaging tools. Also, don't try to use this MCP if you need complex, real-time inventory tracking (like knowing how many physical pens are left in a bin)—that requires connecting to an ERP system type of tool. This MCP focuses entirely on the *gifting process* itself: who gets what, and when it launches.

The Gift Cycle Nightmare

Right now, running a recognition program is a clicking nightmare. You log into your CRM to pull names, then you switch tabs to the gifting dashboard to see who's eligible for gifts. Then you open an Excel sheet just to check budgets and finally, you have to manually draft and send an email coordinating the launch date. It takes half a day of administrative effort.

With this MCP connected through Vinkius, all that friction disappears. You tell your agent what needs doing—for example, 'Run a birthday campaign for the Marketing team.' The agent handles pulling member data, checking milestones, and initiating the order in one go. You get back an actionable status update, not a mountain of tabs to manage.

Giftpack MCP: Control Your Gifting Lifecycle

The manual steps that vanish are checking member eligibility across multiple sheets, manually calculating budgets before creation, and having to switch back and forth between the campaign setup page and the recipient list.

Now, you simply talk to your agent. You tell it what needs doing—whether it's listing all members via `list_gifting_members` or activating an order with `launch_gifting_campaign`—and it executes the entire workflow directly in chat.

Giftpack: 12 Tools for Gifting Operations

Use these tools to manage every stage of the gift process, from adding new members to launching complex, curated campaigns.

#	TOOL	DESCRIPTION
01	<code>verify_api_connection</code>	Checks if your AI client has successfully connected to the Giftpack system.
02	<code>create_gifting_campaign</code>	Starts a new gift campaign order, allowing you to set initial budgets and assign recipients.
03	<code>create_gifting_member</code>	Adds an entirely new recipient—like a client or employee—to your Giftpack database.
04	<code>get_gifting_campaign_details</code>	Retrieves detailed information and metadata about a specific, existing gift order.
05	<code>get_member_details</code>	Pulls the full profile details for any recipient member by name or ID.
06	<code>list_curated_gift_options</code>	Shows a selection of gifts that AI suggests are perfect for a specific receiver's interests.
07	<code>launch_gifting_campaign</code>	Activates the gifting campaign, sending it from 'draft' status into active fulfillment mode.
08	<code>list_gifting_campaigns</code>	Retrieves a list of all current and past gift campaigns you have run or are tracking.
09	<code>list_gifting_milestones</code>	Provides the list of reasons for gifting, such as birthdays or anniversaries, to guide your campaign setup.
10	<code>list_gifting_members</code>	Retrieves a complete roster of every recipient currently stored in your Giftpack workspace.
11	<code>list_campaign_receivers</code>	Shows exactly who is assigned to a particular gifting campaign order.
12	<code>modify_gifting_campaign</code>	Allows you to update or change the budget, recipients, or scope of an existing gift order.

See It in Action

Real prompts you can use once this MCP is connected to your AI agent through Vinkius Cloud.

U List all active members in my Giftpack workspace.

Retrieving members... I found 5 active recipients, including 'Jane Doe' (Employee) and 'Acme Corp' (Client). Would you like to see the profile details for any of them?

U Check the status of AI Order 'ord_12345'.

Fetching order... AI Order ord_12345 is currently in 'Draft' status with a budget of \$500. It has 10 recipients assigned. Would you like to launch it?

U Create a new gifting campaign for 'Holiday Rewards' with a \$1000 budget.

Campaign created! I've successfully set up the 'Holiday Rewards' AI order with a budget of \$1000 USD. You can now add recipients and launch the campaign.

Frequently Asked Questions

01 How do I use Giftpack MCP to check member details?

You simply tell your agent to retrieve the details for a specific person. The agent uses `get_member_details` and provides you with their full profile metadata right in the conversation.

02 Can Giftpack MCP help me list all employees?

Yes, you can use `list_gifting_members` to pull up a complete roster of every single recipient currently stored in your workspace. This is key for planning large campaigns.

03 What's the difference between create_gifting_campaign and launch_gifting_campaign?

create_gifting_campaign only sets up the order, giving you a draft campaign with a budget. You must use launch_gifting_campaign later to officially activate it for fulfillment.

04 How do I find out what gifts are available?

Use list_curated_gift_options and specify the recipient's name or ID. The agent will then pull up a selection of AI-suggested gift options for them.

05 Can Giftpack MCP update an existing order?

Yes, you can modify_gifting_campaign to change budgets, add recipients, or adjust the scope of any campaign that's already been created.
